## Category-937: OWASP Top Ten 2013 Category A9 - Using Components with Known Vulnerabilities

Category ID : 937

### Summary

Weaknesses in this category are related to the A9 category in the OWASP Top Ten 2013.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	928	Weaknesses in OWASP Top Ten (2013)	928	2512
MemberOf	C	1352	OWASP Top Ten 2021 Category A06:2021 - Vulnerable and Outdated Components	1344	2427

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

#### Relationship

This is an unusual category. CWE does not cover the limitations of human processes and procedures that cannot be described in terms of a specific technical weakness as resident in the code, architecture, or configuration of the software. Since "known vulnerabilities" can arise from any kind of weakness, it is not possible to map this OWASP category to other CWE entries, since it would effectively require mapping this category to ALL weaknesses.

## Category-944: SFP Secondary Cluster: Access Management

Category ID : 944

## Summary

This category identifies Software Fault Patterns (SFPs) within the Access Management cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	899	SFP Primary Cluster: Access Control	888	2292
HasMember	G	282	Improper Ownership Management	888	665
HasMember	B	283	Unverified Ownership	888	667
HasMember	P	284	Improper Access Control	888	668
HasMember	G	286	Incorrect User Management	888	680
HasMember	B	708	Incorrect Ownership Assignment	888	1502

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-945: SFP Secondary Cluster: Insecure Resource Access

Category ID : 945

## Summary

This category identifies Software Fault Patterns (SFPs) within the Insecure Resource Access cluster (SFP35).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	899	SFP Primary Cluster: Access Control	888	2292
HasMember	G	285	Improper Authorization	888	673
HasMember	G	424	Improper Protection of Alternate Path	888	1004
HasMember	B	639	Authorization Bypass Through User-Controlled Key	888	1380
HasMember	V	650	Trusting HTTP Permission Methods on the Server Side	888	1405

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-946: SFP Secondary Cluster: Insecure Resource Permissions

Category ID : 946

### Summary

This category identifies Software Fault Patterns (SFPs) within the Insecure Resource Permissions cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	899	SFP Primary Cluster: Access Control	888	2292
HasMember	B	276	Incorrect Default Permissions	888	654
HasMember	V	277	Insecure Inherited Permissions	888	657
HasMember	V	278	Insecure Preserved Inherited Permissions	888	659
HasMember	V	279	Incorrect Execution-Assigned Permissions	888	660
HasMember	B	281	Improper Preservation of Permissions	888	664
HasMember	V	560	Use of umask() with chmod-style Argument	888	1249
HasMember	G	732	Incorrect Permission Assignment for Critical Resource	888	1506

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-947: SFP Secondary Cluster: Authentication Bypass

Category ID : 947

### Summary

This category identifies Software Fault Patterns (SFPs) within the Authentication Bypass cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2291
HasMember	C	287	Improper Authentication	888	681
HasMember	B	288	Authentication Bypass Using an Alternate Path or Channel	888	688
HasMember	B	289	Authentication Bypass by Alternate Name	888	690
HasMember	B	303	Incorrect Implementation of Authentication Algorithm	888	725
HasMember	B	304	Missing Critical Step in Authentication	888	726
HasMember	B	305	Authentication Bypass by Primary Weakness	888	727
HasMember	B	308	Use of Single-factor Authentication	888	739
HasMember	B	309	Use of Password System for Primary Authentication	888	741
HasMember	B	603	Use of Client-Side Authentication	888	1329

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-948: SFP Secondary Cluster: Digital Certificate

Category ID : 948

## Summary

This category identifies Software Fault Patterns (SFPs) within the Digital Certificate cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2291
HasMember	B	296	Improper Following of a Certificate's Chain of Trust	888	706
HasMember	V	297	Improper Validation of Certificate with Host Mismatch	888	709
HasMember	V	298	Improper Validation of Certificate Expiration	888	713
HasMember	B	299	Improper Check for Certificate Revocation	888	715
HasMember	V	593	Authentication Bypass: OpenSSL CTX Object Modified after SSL Objects are Created	888	1305
HasMember	V	599	Missing Validation of OpenSSL Certificate	888	1316

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-949: SFP Secondary Cluster: Faulty Endpoint Authentication

Category ID : 949

## Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Endpoint Authentication cluster (SFP29).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2291
HasMember	V	293	Using Referer Field for Authentication	888	697
HasMember	B	302	Authentication Bypass by Assumed-Immutable Data	888	723
HasMember	G	345	Insufficient Verification of Data Authenticity	888	834
HasMember	G	346	Origin Validation Error	888	837
HasMember	V	350	Reliance on Reverse DNS Resolution for a Security-Critical Action	888	846
HasMember	B	360	Trust of System Event Data	888	870
HasMember	B	551	Incorrect Behavior Order: Authorization Before Parsing and Canonicalization	888	1239
HasMember	B	565	Reliance on Cookies without Validation and Integrity Checking	888	1258
HasMember	V	647	Use of Non-Canonical URL Paths for Authorization Decisions	888	1399

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-950: SFP Secondary Cluster: Hardcoded Sensitive Data

Category ID : 950

## Summary

This category identifies Software Fault Patterns (SFPs) within the Hardcoded Sensitive Data cluster (SFP33).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2291
HasMember	V	258	Empty Password in Configuration File	888	611
HasMember	V	259	Use of Hard-coded Password	888	613
HasMember	V	321	Use of Hard-coded Cryptographic Key	888	772
HasMember	B	547	Use of Hard-coded, Security-relevant Constants	888	1234

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of

weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-951: SFP Secondary Cluster: Insecure Authentication Policy

Category ID : 951

### Summary

This category identifies Software Fault Patterns (SFPs) within the Insecure Authentication Policy cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2291
HasMember	B	262	Not Using Password Aging	888	623
HasMember	B	263	Password Aging with Long Expiration	888	625
HasMember	B	521	Weak Password Requirements	888	1199
HasMember	V	556	ASP.NET Misconfiguration: Use of Identity Impersonation	888	1246
HasMember	B	613	Insufficient Session Expiration	888	1345
HasMember	B	645	Overly Restrictive Account Lockout Mechanism	888	1397

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-952: SFP Secondary Cluster: Missing Authentication

Category ID : 952

### Summary

This category identifies Software Fault Patterns (SFPs) within the Missing Authentication cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2291
HasMember	B	306	Missing Authentication for Critical Function	888	729
HasMember	B	620	Unverified Password Change	888	1357

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-953: SFP Secondary Cluster: Missing Endpoint Authentication

Category ID : 953

### Summary

This category identifies Software Fault Patterns (SFPs) within the Missing Endpoint Authentication cluster (SFP30).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2291
HasMember	V	422	Unprotected Windows Messaging Channel ('Shatter')	888	1002
HasMember	B	425	Direct Request ('Forced Browsing')	888	1005

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-954: SFP Secondary Cluster: Multiple Binds to the Same Port

Category ID : 954

### Summary

This category identifies Software Fault Patterns (SFPs) within the Multiple Binds to the Same Port cluster (SFP32).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2291
HasMember	B	605	Multiple Binds to the Same Port	888	1331

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-955: SFP Secondary Cluster: Unrestricted Authentication

Category ID : 955

### Summary

This category identifies Software Fault Patterns (SFPs) within the Unrestricted Authentication cluster (SFP34).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2291
HasMember	B	307	Improper Restriction of Excessive Authentication Attempts	888	735

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-956: SFP Secondary Cluster: Channel Attack

Category ID : 956

## Summary

This category identifies Software Fault Patterns (SFPs) within the Channel Attack cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	902	SFP Primary Cluster: Channel	888	2293
HasMember	B	290	Authentication Bypass by Spoofing	888	692
HasMember	B	294	Authentication Bypass by Capture-replay	888	699
HasMember	C	300	Channel Accessible by Non-Endpoint	888	717
HasMember	B	301	Reflection Attack in an Authentication Protocol	888	720
HasMember	B	419	Unprotected Primary Channel	888	998
HasMember	B	420	Unprotected Alternate Channel	888	999
HasMember	B	421	Race Condition During Access to Alternate Channel	888	1001
HasMember	C	441	Unintended Proxy or Intermediary ('Confused Deputy')	888	1042

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-957: SFP Secondary Cluster: Protocol Error

Category ID : 957

## Summary

This category identifies Software Fault Patterns (SFPs) within the Protocol Error cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	902	SFP Primary Cluster: Channel	888	2293
HasMember	B	353	Missing Support for Integrity Check	888	857
HasMember	P	435	Improper Interaction Between Multiple Correctly-Behaving Entities	888	1035
HasMember	G	436	Interpretation Conflict	888	1037
HasMember	B	437	Incomplete Model of Endpoint Features	888	1039
HasMember	B	757	Selection of Less-Secure Algorithm During Negotiation ('Algorithm Downgrade')	888	1533

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-958: SFP Secondary Cluster: Broken Cryptography

Category ID : 958

### Summary

This category identifies Software Fault Patterns (SFPs) within the Broken Cryptography cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	903	SFP Primary Cluster: Cryptography	888	2293
HasMember	B	325	Missing Cryptographic Step	888	781
HasMember	G	327	Use of a Broken or Risky Cryptographic Algorithm	888	785
HasMember	B	328	Use of Weak Hash	888	792
HasMember	V	759	Use of a One-Way Hash without a Salt	888	1537
HasMember	V	760	Use of a One-Way Hash with a Predictable Salt	888	1542

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-959: SFP Secondary Cluster: Weak Cryptography

Category ID : 959

### Summary

This category identifies Software Fault Patterns (SFPs) within the Weak Cryptography cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	903	SFP Primary Cluster: Cryptography	888	2293
HasMember	B	261	Weak Encoding for Password	888	621
HasMember	B	322	Key Exchange without Entity Authentication	888	776
HasMember	B	323	Reusing a Nonce, Key Pair in Encryption	888	777
HasMember	B	324	Use of a Key Past its Expiration Date	888	779
HasMember	C	326	Inadequate Encryption Strength	888	783
HasMember	V	329	Generation of Predictable IV with CBC Mode	888	796
HasMember	B	347	Improper Verification of Cryptographic Signature	888	840
HasMember	B	640	Weak Password Recovery Mechanism for Forgotten Password	888	1383

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-960: SFP Secondary Cluster: Ambiguous Exception Type

Category ID : 960

### Summary

This category identifies Software Fault Patterns (SFPs) within the Ambiguous Exception Type cluster (SFP5).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	889	SFP Primary Cluster: Exception Management	888	2287
HasMember	B	396	Declaration of Catch for Generic Exception	888	941
HasMember	B	397	Declaration of Throws for Generic Exception	888	943

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-961: SFP Secondary Cluster: Incorrect Exception Behavior

Category ID : 961

### Summary

This category identifies Software Fault Patterns (SFPs) within the Incorrect Exception Behavior cluster (SFP6).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	889	SFP Primary Cluster: Exception Management	888	2287
HasMember	B	392	Missing Report of Error Condition	888	933
HasMember	B	393	Return of Wrong Status Code	888	935
HasMember	B	455	Non-exit on Failed Initialization	888	1065
HasMember	B	460	Improper Cleanup on Thrown Exception	888	1080
HasMember	B	544	Missing Standardized Error Handling Mechanism	888	1232
HasMember	B	584	Return Inside Finally Block	888	1292
HasMember	G	636	Not Failing Securely ('Failing Open')	888	1374
HasMember	P	703	Improper Check or Handling of Exceptional Conditions	888	1493

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-962: SFP Secondary Cluster: Unchecked Status Condition

Category ID : 962

## Summary

This category identifies Software Fault Patterns (SFPs) within the Unchecked Status Condition cluster (SFP4).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	889	SFP Primary Cluster: Exception Management	888	2287
HasMember	B	248	Uncaught Exception	888	587
HasMember	B	252	Unchecked Return Value	888	596
HasMember	B	253	Incorrect Check of Function Return Value	888	603
HasMember	B	273	Improper Check for Dropped Privileges	888	650
HasMember	B	280	Improper Handling of Insufficient Permissions or Privileges	888	662
HasMember	B	372	Incomplete Internal State Distinction	888	901
HasMember	B	390	Detection of Error Condition Without Action	888	925
HasMember	B	391	Unchecked Error Condition	888	930
HasMember	B	394	Unexpected Status Code or Return Value	888	937
HasMember	B	395	Use of NullPointerException Catch to Detect NULL Pointer Dereference	888	939
HasMember	B	431	Missing Handler	888	1023
HasMember	B	478	Missing Default Case in Multiple Condition Expression	888	1119
HasMember	B	484	Omitted Break Statement in Switch	888	1138
HasMember	V	600	Uncaught Exception in Servlet	888	1318
HasMember	G	665	Improper Initialization	888	1426
HasMember	G	754	Improper Check for Unusual or Exceptional Conditions	888	1522
HasMember	G	755	Improper Handling of Exceptional Conditions	888	1531

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-963: SFP Secondary Cluster: Exposed Data

Category ID : 963

### Summary

This category identifies Software Fault Patterns (SFPs) within the Exposed Data cluster (SFP23).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	895	SFP Primary Cluster: Information Leak	888	2290
HasMember	V	5	J2EE Misconfiguration: Data Transmission Without Encryption	888	1
HasMember	V	7	J2EE Misconfiguration: Missing Custom Error Page	888	4
HasMember	V	8	J2EE Misconfiguration: Entity Bean Declared Remote	888	6

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-964: SFP Secondary Cluster: Exposure Temporary File

Category ID : 964

### Summary

This category identifies Software Fault Patterns (SFPs) within the Exposure Temporary File cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	895	SFP Primary Cluster: Information Leak	888	2290
HasMember	G	377	Insecure Temporary File	888	908
HasMember	B	378	Creation of Temporary File With Insecure Permissions	888	911
HasMember	B	379	Creation of Temporary File in Directory with Insecure Permissions	888	913

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-965: SFP Secondary Cluster: Insecure Session Management

Category ID : 965

### Summary

This category identifies Software Fault Patterns (SFPs) within the Insecure Session Management cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	895	SFP Primary Cluster: Information Leak	888	2290
HasMember	V	6	J2EE Misconfiguration: Insufficient Session-ID Length	888	2
HasMember	B	488	Exposure of Data Element to Wrong Session	888	1145
HasMember	B	524	Use of Cache Containing Sensitive Information	888	1208

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-966: SFP Secondary Cluster: Other Exposures

Category ID : 966

### Summary

This category identifies Software Fault Patterns (SFPs) within the Other Exposures cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	895	SFP Primary Cluster: Information Leak	888	2290
HasMember	V	453	Insecure Default Variable Initialization	888	1061
HasMember	B	487	Reliance on Package-level Scope	888	1144
HasMember	V	492	Use of Inner Class Containing Sensitive Data	888	1152
HasMember	V	525	Use of Web Browser Cache Containing Sensitive Information	888	1209
HasMember	V	614	Sensitive Cookie in HTTPS Session Without 'Secure' Attribute	888	1347
HasMember	V	651	Exposure of WSDL File Containing Sensitive Information	888	1407

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-969: SFP Secondary Cluster: Faulty Memory Release

Category ID : 969

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Memory Release cluster (SFP12).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	891	SFP Primary Cluster: Memory Management	888	2288
HasMember	V	415	Double Free	888	989
HasMember	V	590	Free of Memory not on the Heap	888	1301
HasMember	V	761	Free of Pointer not at Start of Buffer	888	1545
HasMember	B	763	Release of Invalid Pointer or Reference	888	1552

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-970: SFP Secondary Cluster: Faulty Buffer Access

Category ID : 970

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Buffer Access cluster (SFP8).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	890	SFP Primary Cluster: Memory Access	888	2287
HasMember	G	118	Incorrect Access of Indexable Resource ('Range Error')	888	290
HasMember	G	119	Improper Restriction of Operations within the Bounds of a Memory Buffer	888	291
HasMember	B	120	Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	888	303
HasMember	V	121	Stack-based Buffer Overflow	888	312
HasMember	V	122	Heap-based Buffer Overflow	888	317
HasMember	B	123	Write-what-where Condition	888	321
HasMember	B	124	Buffer Underwrite ('Buffer Underflow')	888	324
HasMember	B	125	Out-of-bounds Read	888	327
HasMember	V	126	Buffer Over-read	888	332
HasMember	V	127	Buffer Under-read	888	335
HasMember	V	129	Improper Validation of Array Index	888	339

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-971: SFP Secondary Cluster: Faulty Pointer Use

Category ID : 971

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Pointer Use cluster (SFP7).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	890	SFP Primary Cluster: Memory Access	888	2287
HasMember	B	469	Use of Pointer Subtraction to Determine Size	888	1093
HasMember	B	476	NULL Pointer Dereference	888	1110
HasMember	V	588	Attempt to Access Child of a Non-structure Pointer	888	1298

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-972: SFP Secondary Cluster: Faulty String Expansion

Category ID : 972

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty String Expansion cluster (SFP9).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	890	SFP Primary Cluster: Memory Access	888	2287
HasMember	V	785	Use of Path Manipulation Function without Maximum-sized Buffer	888	1608

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).

HasMember	B	698	Execution After Redirect (EAR)	888	1491
HasMember	G	705	Incorrect Control Flow Scoping	888	1497

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

---

## Category-978: SFP Secondary Cluster: Implementation

Category ID : 978

### Summary

This category identifies Software Fault Patterns (SFPs) within the Implementation cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	907	SFP Primary Cluster: Other	888	2296
HasMember	B	358	Improperly Implemented Security Check for Standard	888	864
HasMember	C	398	7PK - Code Quality	888	2213
HasMember	V	623	Unsafe ActiveX Control Marked Safe For Scripting	888	1362
HasMember	P	710	Improper Adherence to Coding Standards	888	1504

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-979: SFP Secondary Cluster: Failed Chroot Jail

Category ID : 979

### Summary

This category identifies Software Fault Patterns (SFPs) within the Failed Chroot Jail cluster (SFP17).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	893	SFP Primary Cluster: Path Resolution	888	2289
HasMember	V	243	Creation of chroot Jail Without Changing Working Directory	888	579

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-980: SFP Secondary Cluster: Link in Resource Name Resolution

Category ID : 980

### Summary

This category identifies Software Fault Patterns (SFPs) within the Link in Resource Name Resolution cluster (SFP18).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	893	SFP Primary Cluster: Path Resolution	888	2289
HasMember	B	59	Improper Link Resolution Before File Access ('Link Following')	888	111
HasMember	V	62	UNIX Hard Link	888	119
HasMember	V	64	Windows Shortcut Following (.LNK)	888	121
HasMember	V	65	Windows Hard Link	888	123
HasMember	B	386	Symbolic Name not Mapping to Correct Object	888	924
HasMember	G	610	Externally Controlled Reference to a Resource in Another Sphere	888	1339

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-981: SFP Secondary Cluster: Path Traversal

Category ID : 981

### Summary

This category identifies Software Fault Patterns (SFPs) within the Path Traversal cluster (SFP16).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	893	SFP Primary Cluster: Path Resolution	888	2289
HasMember	B	22	Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	888	33
HasMember	B	23	Relative Path Traversal	888	46

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-982: SFP Secondary Cluster: Failure to Release Resource

Category ID : 982

### Summary

This category identifies Software Fault Patterns (SFPs) within the Failure to Release Resource cluster (SFP14).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	892	SFP Primary Cluster: Resource Management	888	2288

Nature	Type	ID	Name	V	Page
HasMember		404	Improper Resource Shutdown or Release	888	961
HasMember		459	Incomplete Cleanup	888	1076
HasMember		771	Missing Reference to Active Allocated Resource	888	1574
HasMember		772	Missing Release of Resource after Effective Lifetime	888	1576
HasMember		773	Missing Reference to Active File Descriptor or Handle	888	1581
HasMember		775	Missing Release of File Descriptor or Handle after Effective Lifetime	888	1584

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-983: SFP Secondary Cluster: Faulty Resource Use

Category ID : 983

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Resource Use cluster (SFP15).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf		892	SFP Primary Cluster: Resource Management	888	2288
HasMember		416	Use After Free	888	993
HasMember		672	Operation on a Resource after Expiration or Release	888	1444

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. ## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-996: SFP Secondary Cluster: Security

Category ID : 996

### Summary

This category identifies Software Fault Patterns (SFPs) within the Security cluster.

**Membership**

Nature	Type	ID	Name	V	Page
MemberOf	C	906	SFP Primary Cluster: UI	888	2295
HasMember	B	356	Product UI does not Warn User of Unsafe Actions	888	861
HasMember	B	357	Insufficient UI Warning of Dangerous Operations	888	863
HasMember	C	446	UI Discrepancy for Security Feature	888	1051

**Notes****Mapping**

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

**Category-997: SFP Secondary Cluster: Information Loss**

Category ID : 997

**Summary**

This category identifies Software Fault Patterns (SFPs) within the Information Loss cluster.

**Membership**

**Notes****Mapping**

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

**Category-1005: 7PK - Input Validation and Representation**

Category ID : 1005

**Summary**

This category represents one of the phyla in the Seven Pernicious Kingdoms vulnerability classification. It includes weaknesses that exist when an application does not properly validate or represent input. According to the authors of the Seven Pernicious Kingdoms, "Input validation and representation problems are caused by metacharacters, alternate encodings and numeric representations. Security problems result from trusting input."

**Membership**

Nature	Type	ID	Name	V	Page
MemberOf	V	700	Seven Pernicious Kingdoms	700	2496
HasMember	C	20	Improper Input Validation	700	20

## Category-1006: Bad Coding Practices

Category ID : 1006

### Summary

Weaknesses in this category are related to coding practices that are deemed unsafe and increase the chances that an exploitable vulnerability will be present in the application. These weaknesses do not directly introduce a vulnerability, but indicate that the product has not been carefully developed or maintained. If a program is complex, difficult to maintain, not portable, or shows evidence of neglect, then there is a higher likelihood that weaknesses are buried in the code.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1009: Audit

Category ID : 1009

### Summary

Weaknesses in this category are related to the design and architecture of audit-based components of the system. Frequently these deal with logging user activities in order to identify attackers and modifications to the system. The weaknesses in this category could lead to a degradation of the quality of the audit capability if they are not addressed when designing or implementing a secure architecture.

## Category-1010: Authenticate Actors

Category ID : 1010

### Summary

Weaknesses in this category are related to the design and architecture of authentication components of the system. Frequently these deal with verifying the entity is indeed who it claims to be. The weaknesses in this category could lead to a degradation of the quality of authentication if they are not addressed when designing or implementing a secure architecture.

## Category-1011: Authorize Actors

Category ID : 1011

### Summary

Weaknesses in this category are related to the design and architecture of a system's authorization components. Frequently these deal with enforcing that agents have the required permissions before performing certain operations, such as modifying data. The weaknesses in this category could lead to a degradation of quality of the authorization capability if they are not addressed when designing or implementing a secure architecture.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1012: Cross Cutting

Category ID : 1012

## Summary

Weaknesses in this category are related to the design and architecture of multiple security tactics and how they affect a system. For example, information exposure can impact the Limit Access and Limit Exposure security tactics. The weaknesses in this category could lead to a degradation of the quality of many capabilities if they are not addressed when designing or implementing a secure architecture.

## Category-1013: Encrypt Data

Category ID : 1013

### Summary

Weaknesses in this category are related to the design and architecture of data confidentiality in a system. Frequently these deal with the use of encryption libraries. The weaknesses in this category could lead to a degradation of the quality data encryption if they are not addressed when designing or implementing a secure architecture.

## Category-1014: Identify Actors

Category ID : 1014

### Summary

Weaknesses in this category are related to the design and architecture of a system's identification management components. Frequently these deal with verifying that external agents provide inputs into the system. The weaknesses in this category could lead to a degradation of the quality of identification management if they are not addressed when designing or implementing a secure architecture.

## Category-1015: Limit Access

Category ID : 1015

## Summary

Weaknesses in this category are related to the design and architecture of system resources. Frequently these deal with restricting the amount of resources that are accessed by actors, such as memory, network connections, CPU or access points. The weaknesses in this category could lead to a degradation of the quality of authentication if they are not addressed when designing or implementing a secure architecture.

## Category-1016: Limit Exposure

Category ID : 1016

## Summary

Weaknesses in this category are related to the design and architecture of the entry points to a system. Frequently these deal with minimizing the attack surface through designing the system with the least needed amount of entry points. The weaknesses in this category could lead to a degradation of a system's defenses if they are not addressed when designing or implementing a secure architecture.

## Category-1017: Lock Computer

Category ID : 1017

## Summary

Weaknesses in this category are related to the design and architecture of a system's lockout mechanism. Frequently these deal with scenarios that take effect in case of multiple failed attempts to access a given resource. The weaknesses in this category could lead to a degradation of access to system assets if they are not addressed when designing or implementing a secure architecture.

## Category-1018: Manage User Sessions

Category ID : 1018

### Summary

Weaknesses in this category are related to the design and architecture of session management. Frequently these deal with the information or status about each user and their access rights for the duration of multiple requests. The weaknesses in this category could lead to a degradation of the quality of session management if they are not addressed when designing or implementing a secure architecture.

## Category-1019: Validate Inputs

Category ID : 1019

### Summary

Weaknesses in this category are related to the design and architecture of a system's input validation components. Frequently these deal with sanitizing, neutralizing and validating any externally provided inputs to minimize malformed data from entering the system and preventing

code injection in the input data. The weaknesses in this category could lead to a degradation of the quality of data flow in a system if they are not addressed when designing or implementing a secure architecture.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1020: Verify Message Integrity

Category ID : 1020

### Summary

Weaknesses in this category are related to the design and architecture of a system's data integrity components. Frequently these deal with ensuring integrity of data, such as messages, resource files, deployment files, and configuration files. The weaknesses in this category could lead to a degradation of data integrity quality if they are not addressed when designing or implementing a secure architecture.

### Membership

## Category-1032: OWASP Top Ten 2017 Category A6 - Security Misconfiguration

Category ID : 1032

## Summary

Weaknesses in this category are related to the A6 category in the OWASP Top Ten 2017.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1026	Weaknesses in OWASP Top Ten (2017)	1026	2517
MemberOf	C	1349	OWASP Top Ten 2021 Category A05:2021 - Security Misconfiguration	1344	2426
HasMember	C	16	Configuration	1026	2195
HasMember	B	209	Generation of Error Message Containing Sensitive Information	1026	528
HasMember	V	548	Exposure of Information Through Directory Listing	1026	1236

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

#### Relationship

While the OWASP document maps to CWE-2 and CWE-388, these are not appropriate for mapping, as they are high-level categories that are only intended for the Seven Pernicious Kingdoms view (CWE-700).

## Category-1035: OWASP Top Ten 2017 Category A9 - Using Components with Known Vulnerabilities

Category ID : 1035

### Summary

Weaknesses in this category are related to the A9 category in the OWASP Top Ten 2017.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1026	Weaknesses in OWASP Top Ten (2017)	1026	2517
MemberOf	C	1352	OWASP Top Ten 2021 Category A06:2021 - Vulnerable and Outdated Components	1344	2427

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

#### Relationship

This is an unusual category. CWE does not cover the limitations of human processes and procedures that cannot be described in terms of a specific technical weakness as resident in the code, architecture, or configuration of the software. Since "known vulnerabilities" can arise from any kind of weakness, it is not possible to map this OWASP category to other CWE entries, since it would effectively require mapping this category to ALL weaknesses.

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of

weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1132: CISQ Quality Measures (2016) - Performance Efficiency

Category ID : 1132

### Summary

Weaknesses in this category are related to the CISQ Quality Measures for Performance Efficiency, as documented in 2016 with the Automated Source Code Performance Efficiency Measure (ASCPem) Specification 1.0. Presence of these weaknesses could reduce the performance efficiency of the software.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1128	CISQ Quality Measures (2016)	1128	2520
HasMember	V	1042	Static Member Data Element outside of a Singleton Class Element	1128	1820
HasMember	B	1043	Data Element Aggregating an Excessively Large Number of Non-Primitive Elements	1128	1821
HasMember	B	1046	Creation of Immutable Text Using String Concatenation	1128	1824
HasMember	B	1049	Excessive Data Query Operations in a Large Data Table	1128	1827
HasMember	B	1050	Excessive Platform Resource Consumption within a Loop	1128	1829
HasMember	B	1057	Data Access Operations Outside of Expected Data Manager Component	1128	1836

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1195: Manufacturing and Life Cycle Management Concerns

Category ID : 1195

### Summary

Weaknesses in this category are root-caused to defects that arise in the semiconductor-manufacturing process or during the life cycle and supply chain.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1194	Hardware Design	1194	2525
HasMember	G	1059	Insufficient Technical Documentation	1194	1838
HasMember	B	1248	Semiconductor Defects in Hardware Logic with Security-Sensitive Implications	1194	1976
HasMember	B	1266	Improper Scrubbing of Sensitive Data from Decommissioned Device	1194	2017

HasMember	B	1273	Device Unlock Credential Sharing	1194	2032
HasMember	B	1297	Unprotected Confidential Information on Device is Accessible by OSAT Vendors	1194	2080

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1196: Security Flow Issues

Category ID : 1196

## Summary

Weaknesses in this category are related to improper design of full-system security flows, including but not limited to secure boot, secure update, and hardware-device attestation.

## Membership

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of

weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1197: Integration Issues

Category ID : 1197

### Summary

Weaknesses in this category are those that arise due to integration of multiple hardware Intellectual Property (IP) cores, from System-on-a-Chip (SoC) subsystem interactions, or from hardware platform subsystem interactions.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1194	Hardware Design	1194	2525

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1198: Privilege Separation and Access Control Issues

Category ID : 1198

### Summary

Weaknesses in this category are related to features and mechanisms providing hardware-based isolation and access control (e.g., identity, policy, locking control) of sensitive shared hardware resources such as registers and fuses.

### Membership

Comments: See member weaknesses of this category.

## Category-1203: Peripherals, On-chip Fabric, and Interface/IO Problems

Category ID : 1203

### Summary

Weaknesses in this category are related to hardware security problems that apply to peripheral devices, IO interfaces, on-chip interconnects, network-on-chip (NoC), and buses. For example, this category includes issues related to design of hardware interconnect and/or protocols such as PCIe, USB, SMBUS, general-purpose IO pins, and user-input peripherals such as mouse and keyboard.

### Membership

Comments: See member weaknesses of this category.

## Category-1210: Audit / Logging Errors

Category ID : 1210

## Summary

Weaknesses in this category are related to audit-based components of a software system. Frequently these deal with logging user activities in order to identify undesired access and modifications to the system. The weaknesses in this category could lead to a degradation of the quality of the audit capability if they are not addressed.

## Membership

Comments: See member weaknesses of this category.

## Category-1211: Authentication Errors

Category ID : 1211

## Summary

Weaknesses in this category are related to authentication components of a system. Frequently these deal with the ability to verify that an entity is indeed who it claims to be. If not addressed when designing or implementing a software system, these weaknesses could lead to a degradation of the quality of the authentication capability.

## Membership

Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1212: Authorization Errors

Category ID : 1212

### Summary

Weaknesses in this category are related to authorization components of a system. Frequently these deal with the ability to enforce that agents have the required permissions before performing certain operations, such as modifying data. If not addressed when designing or implementing a software system, these weaknesses could lead to a degradation of the quality of the authorization capability.

## Category-1214: Data Integrity Issues

Category ID : 1214

### Summary

Weaknesses in this category are related to a software system's data integrity components. Frequently these deal with the ability to ensure the integrity of data, such as messages, resource files, deployment files, and configuration files. The weaknesses in this category could lead to a degradation of data integrity quality if they are not addressed.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1215: Data Validation Issues

Category ID : 1215

### Summary

Weaknesses in this category are related to a software system's components for input validation, output validation, or other kinds of validation. Validation is a frequently-used technique for ensuring that data conforms to expectations before it is further processed as input or output. There are many varieties of validation (see CWE-20, which is just for input validation). Validation is distinct from other techniques that attempt to modify data before processing it, although developers may consider all attempts to product "safe" inputs or outputs as some kind of validation. Regardless, validation is a powerful tool that is often used to minimize malformed data from entering the system, or indirectly avoid code injection or other potentially-malicious patterns when generating output. The weaknesses in this category could lead to a degradation of the quality of data flow in a system if they are not addressed.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

### Relationship

CWE-20 (Improper Input Validation) is not included in this category because it is a Class level, and this category focuses more on Base level weaknesses. Also note that other kinds of weaknesses besides improper validation are included as members of this category.

## Category-1216: Lockout Mechanism Errors

Category ID : 1216

### Summary

Weaknesses in this category are related to a software system's lockout mechanism. Frequently these deal with scenarios that take effect in case of multiple failed attempts to access a given resource. The weaknesses in this category could lead to a degradation of access to system assets if they are not addressed.

### Membership

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1217: User Session Errors

Category ID : 1217

### Summary

Weaknesses in this category are related to session management. Frequently these deal with the information or status about each user and their access rights for the duration of multiple requests. The weaknesses in this category could lead to a degradation of the quality of session management if they are not addressed.

## Membership

## Category-1219: File Handling Issues

Category ID : 1219

## Summary

Weaknesses in this category are related to the handling of files within a software system. Files, directories, and folders are so central to information technology that many different weaknesses and variants have been discovered.

## Membership

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

## Category-1309: CISQ Quality Measures - Efficiency

Category ID : 1309

## Summary

Weaknesses in this category are related to the CISQ Quality Measures for Efficiency. Presence of these weaknesses could reduce the efficiency of the software.

### Membership

Nature	Type	ID	Name	V	Page

## Notes

## Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

### Maintenance

As of CWE 4.6, the relationships in this category were pulled directly from the CWE mappings cited in the 2021 OWASP Top Ten. These mappings include categories, which are discouraged for mapping, as well as high-level weaknesses such as Pillars. The CWE Program will work with OWASP to improve these mappings, possibly requiring modifications to CWE itself.

Comments: See member weaknesses of this category.

### Maintenance

As of CWE 4.6, the relationships in this category were pulled directly from the CWE mappings cited in the 2021 OWASP Top Ten. These mappings include categories, which are discouraged for mapping. The CWE Program will work with OWASP to improve these mappings, possibly requiring modifications to CWE itself.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

### Maintenance

As of CWE 4.6, the relationships in this category were pulled directly from the CWE mappings cited in the 2021 OWASP Top Ten. These mappings include categories, which are discouraged for mapping, as well as high-level weaknesses. The CWE Program will work with OWASP to improve these mappings, possibly requiring modifications to CWE itself.

## Category-1359: ICS Communications

Category ID : 1359

### Summary

Weaknesses in this category are related to the "ICS Communications" super category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1358	Weaknesses in SEI ETF Categories of Security Vulnerabilities in ICS	1358	2535
HasMember	C	1364	ICS Communications: Zone Boundary Failures	1358	2435
HasMember	C	1365	ICS Communications: Unreliability	1358	2436
HasMember	C	1366	ICS Communications: Frail Security in Protocols	1358	2437

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

#### Relationship

Relationships in this category are not authoritative and subject to change. See Maintenance notes.

#### Maintenance

This category was created in CWE 4.7 to facilitate and illuminate discussion about weaknesses in ICS with [REF-1248] as a starting point. After the release of CWE 4.9 in October 2022, this has been under active review by members of the "Boosting CWE" subgroup of the CWE-CAPEC ICS/OT Special Interest Group (SIG). Relationships are still subject to change. In addition, there may be some issues in [REF-1248] that are outside of the current scope of CWE, which will require consultation with many CWE stakeholders to resolve.

## Category-1364: ICS Communications: Zone Boundary Failures

Category ID : 1364

## Summary

Weaknesses in this category are related to the "Zone Boundary Failures" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Within an ICS system, for traffic that crosses through network zone boundaries, vulnerabilities arise when those boundaries were designed for safety or other purposes but are being repurposed for security." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Membership

Category ID : 1366

### Summary

Weaknesses in this category are related to the "Frail Security in Protocols" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Vulnerabilities arise as a result of mis-implementation or incomplete implementation of security in ICS implementations of communication protocols." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	1359	ICS Communications	1358	2431
HasMember	B	290	Authentication Bypass by Spoofing	1358	692
HasMember	B	325	Missing Cryptographic Step	1358	781
HasMember	G	327	Use of a Broken or Risky Cryptographic Algorithm	1358	785
HasMember	B	358	Improperly Implemented Security Check for Standard	1358	864

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities).  
 Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

### Relationship

Relationships in this category are not authoritative and subject to change. See Maintenance notes.

### Maintenance

This category was created in CWE 4.7 to facilitate and illuminate discussion about weaknesses in ICS with [REF-1248] as a starting point. After the release of CWE 4.9 in October 2022, this has been under active review by members of the "Boosting CWE" subgroup of the CWE-CAPEC ICS/OT Special Interest Group (SIG). Relationships are still subject to change. In addition, there may be some issues in [REF-1248] that are outside of the current scope of CWE, which will require consultation with many CWE stakeholders to resolve.

## Category-1367: ICS Dependencies (& Architecture): External Physical Systems

Category ID : 1367

## Summary

Weaknesses in this category are related to the "External Physical Systems" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Due to the highly interconnected technologies in use, an external dependency on another physical system could cause an availability interruption for the protected system." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1368: ICS Dependencies (& Architecture): External Digital Systems

Category ID : 1368

### Summary

Weaknesses in this category are related to the "External Digital Systems" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Due to the highly interconnected technologies in use, an external dependency on another digital system could cause a confidentiality, integrity, or availability incident for the protected system." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1369: ICS Supply Chain: IT/OT Convergence/Expansion

Category ID : 1369

### Summary

Weaknesses in this category are related to the "IT/OT Convergence/Expansion" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "The increased penetration of DER devices and smart loads make emerging ICS networks more like IT networks and thus susceptible to vulnerabilities similar to those of IT networks." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1370: ICS Supply Chain: Common Mode Frailties

Category ID : 1370

### Summary

Weaknesses in this category are related to the "Common Mode Frailties" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "At the component level, most ICS systems are assembled from common parts made by other companies. One or more of these common parts might contain a vulnerability that could result in a wide-spread incident." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1371: ICS Supply Chain: Poorly Documented or Undocumented Features

Category ID : 1371

### Summary

Weaknesses in this category are related to the "Poorly Documented or Undocumented Features" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Undocumented capabilities and configurations pose a risk by not having a clear understanding of what the device is specifically supposed to do and only do. Therefore possibly opening up the attack surface and vulnerabilities." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1373: ICS Engineering (Construction/Deployment): Trust Model Problems

Category ID : 1373

### Summary

Weaknesses in this category are related to the "Trust Model Problems" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Assumptions made about the user during the design or construction phase may result in vulnerabilities after the system is installed if the user operates it using a different security approach or process than what was designed or built." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

### Membership

## Category-1374: ICS Engineering (Construction/Deployment): Maker Breaker Blindness

Category ID : 1374

### Summary

Weaknesses in this category are related to the "Maker Breaker Blindness" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Lack of awareness of deliberate attack techniques by people (vs failure modes from natural causes like weather or metal fatigue) may lead to insufficient security controls being built into ICS systems." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1375: ICS Engineering (Construction/Deployment): Gaps in Details/Data

Category ID : 1375

### Summary

Weaknesses in this category are related to the "Gaps in Details/Data" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Highly complex systems are often operated by personnel who have years of experience in managing that particular facility or plant. Much of their knowledge is passed along through verbal or hands-on training but may not be fully documented in written practices and procedures." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1376: ICS Engineering (Construction/Deployment): Security Gaps in Commissioning

Category ID : 1376

## Summary

Weaknesses in this category are related to the "Security Gaps in Commissioning" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "As a large system is brought online components of the system may remain vulnerable until the entire system is operating and functional and security controls are put in place. This creates a window of opportunity for an adversary during the commissioning process." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1377: ICS Engineering (Construction/Deployment): Inherent Predictability in Design

Category ID : 1377

### Summary

Weaknesses in this category are related to the "Inherent Predictability in Design" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "The commonality of design (in ICS/SCADA architectures) for energy systems and environments opens up the possibility of scaled compromise by leveraging the inherent predictability in the design." Note: members of this category include "Nearest IT Neighbor" recommendations from the report,

as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	1362	ICS Engineering (Constructions/Deployment)	1358	2433
HasMember	B	1278	Missing Protection Against Hardware Reverse Engineering Using Integrated Circuit (IC) Imaging Techniques	1358	2043

### Notes

#### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves. Comments: See member weaknesses of this category.

#### Relationship

Relationships in this category are not authoritative and subject to change. See Maintenance notes.

#### Maintenance

This category was created in CWE 4.7 to facilitate and illuminate discussion about weaknesses in ICS with [REF-1248] as a starting point. After the release of CWE 4.9 in October 2022, this has been under active review by members of the "Boosting CWE" subgroup of the CWE-CAPEC ICS/OT Special Interest Group (SIG). Relationships are still subject to change. In addition, there may be some issues in [REF-1248] that are outside of the current scope of CWE, which will require consultation with many CWE stakeholders to resolve.

## Category-1378: ICS Operations (& Maintenance): Gaps in obligations and training

Category ID : 1378

### Summary

Weaknesses in this category are related to the "Gaps in obligations and training" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "OT ownership and responsibility for identifying and mitigating vulnerabilities are not clearly defined or communicated within an organization, leaving environments unpatched, exploitable, and with a broader attack surface." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

**Category-1379: ICS Operations (& Maintenance): Human factors in ICS environments**

Category ID : 1379

**Summary**

Weaknesses in this category are related to the "Human factors in ICS environments" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Environmental factors in ICS including physical duress, system complexities, and isolation may result in security gaps or inadequacies in the performance of individual duties and responsibilities." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

**Category-1380: ICS Operations (& Maintenance): Post-analysis changes**

Category ID : 1380

**Summary**

Weaknesses in this category are related to the "Post-analysis changes" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Changes made to a previously analyzed and approved ICS environment can introduce new security vulnerabilities (as opposed to safety)." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

**Membership**

## Category-1381: ICS Operations (& Maintenance): Exploitable Standard Operational Procedures

Category ID : 1381

### Summary

Weaknesses in this category are related to the "Exploitable Standard Operational Procedures" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Standard ICS Operational Procedures developed for safety and operational functionality in a closed, controlled communications environment can introduce vulnerabilities in a more connected environment." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1382: ICS Operations (& Maintenance): Emerging Energy Technologies

Category ID : 1382

## Summary

Weaknesses in this category are related to the "Emerging Energy Technologies" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "With the rapid evolution of the energy system accelerated by the emergence of new technologies such as DERs, electric vehicles, advanced communications (5G+), novel and diverse challenges arise for secure and resilient operation of the system." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves [REF-1330]. Comments: See member weaknesses of this category.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves [REF-1330]. Comments: See member weaknesses of this category.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves [REF-1330]. Comments: See member weaknesses of this category.

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves [REF-1330]. Comments: See member weaknesses of this category.

## Category-1416: Comprehensive Categorization: Resource Lifecycle Management

Category ID : 1416

### Summary

Weaknesses in this category are related to resource lifecycle management.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1400	Comprehensive Categorization for Software Assurance Trends	1400	2537
HasMember	V	98	Improper Control of Filename for Include/Require Statement in PHP Program ('PHP Remote File Inclusion')	1400	235
HasMember	G	118	Incorrect Access of Indexable Resource ('Range Error')	1400	290
HasMember	B	178	Improper Handling of Case Sensitivity	1400	441
HasMember	V	192	Integer Coercion Error	1400	479
HasMember	V	194	Unexpected Sign Extension	1400	487
HasMember	V	195	Signed to Unsigned Conversion Error	1400	490
HasMember	V	196	Unsigned to Signed Conversion Error	1400	494

Nature	Type	ID	Name	V	Page
HasMember	B	197	Numeric Truncation Error	1400	496
HasMember	B	212	Improper Removal of Sensitive Information Before Storage or Transfer	1400	538
HasMember	G	221	Information Loss or Omission	1400	550
HasMember	B	226	Sensitive Information in Resource Not Removed Before Reuse	1400	555
HasMember	V	243	Creation of chroot Jail Without Changing Working Directory	1400	579
HasMember	B	372	Incomplete Internal State Distinction	1400	901
HasMember	B	386	Symbolic Name not Mapping to Correct Object	1400	924
HasMember	G	400	Uncontrolled Resource Consumption	1400	946
HasMember	G	404	Improper Resource Shutdown or Release	1400	961
HasMember	G	405	Asymmetric Resource Consumption (Amplification)	1400	967
HasMember	G	406	Insufficient Control of Network Message Volume (Network Amplification)	1400	972
HasMember	G	407	Inefficient Algorithmic Complexity	1400	974
HasMember	B	409	Improper Handling of Highly Compressed Data (Data Amplification)	1400	978
HasMember	B	410	Insufficient Resource Pool	1400	980
HasMember	B	434	Unrestricted Upload of File with Dangerous Type	1400	1028
HasMember	V	453	Insecure Default Variable Initialization	1400	1061
HasMember	B	454	External Initialization of Trusted Variables or Data Stores	1400	1063
HasMember	V	456	Missing Initialization of a Variable	1400	1067
HasMember	V	457	Use of Uninitialized Variable	1400	1072
HasMember	B	459	Incomplete Cleanup	1400	1076
HasMember	B	460	Improper Cleanup on Thrown Exception	1400	1080
HasMember	B	471	Modification of Assumed-Immutable Data (MAID)	1400	1099
HasMember	B	487	Reliance on Package-level Scope	1400	1144
HasMember	V	495	Private Data Structure Returned From A Public Method	1400	1166
HasMember	V	496	Public Data Assigned to Private Array-Typed Field	1400	1168
HasMember	B	501	Trust Boundary Violation	1400	1179
HasMember	V	568	finalize() Method Without super.finalize()	1400	1265
HasMember	V	580	clone() Method Without super.clone()	1400	1285
HasMember	V	588	Attempt to Access Child of a Non-structure Pointer	1400	1298
HasMember	V	607	Public Static Final Field References Mutable Object	1400	1334
HasMember	G	610	Externally Controlled Reference to a Resource in Another Sphere	1400	1339
HasMember	V	618	Exposed Unsafe ActiveX Method	1400	1354
HasMember	G	662	Improper Synchronization	1400	1420
HasMember	P	664	Improper Control of a Resource Through its Lifetime	1400	1424
HasMember	G	665	Improper Initialization	1400	1426
HasMember	G	666	Operation on Resource in Wrong Phase of Lifetime	1400	1432
HasMember	G	669	Incorrect Resource Transfer Between Spheres	1400	1441

HasMember	B	681	Incorrect Conversion between Numeric Types	1400	1458
HasMember	G	704	Incorrect Type Conversion or Cast	1400	1495
HasMember	G	706	Use of Incorrectly-Resolved Name or Reference	1400	1499
HasMember	B	749	Exposed Dangerous Method or Function	1400	1518
HasMember	B	770	Allocation of Resources Without Limits or Throttling	1400	1566

Nature	Type	ID	Name	V	Page
HasMember	B	771	Missing Reference to Active Allocated Resource	1400	1574
HasMember	B	772	Missing Release of Resource after Effective Lifetime	1400	1576
HasMember	V	773	Missing Reference to Active File Descriptor or Handle	1400	1581
HasMember	V	774	Allocation of File Descriptors or Handles Without Limits or Throttling	1400	1582
HasMember	V	775	Missing Release of File Descriptor or Handle after Effective Lifetime	1400	1584
HasMember	B	776	Improper Restriction of Recursive Entity References in DTDs ('XML Entity Expansion')	1400	1585
HasMember	B	779	Logging of Excessive Data	1400	1594
HasMember	V	782	Exposed IOCTL with Insufficient Access Control	1400	1600
HasMember	V	827	Improper Control of Document Type Definition	1400	1687
HasMember	B	829	Inclusion of Functionality from Untrusted Control Sphere	1400	1692
HasMember	V	830	Inclusion of Web Functionality from an Untrusted Source	1400	1698
HasMember	B	843	Access of Resource Using Incompatible Type ('Type Confusion')	1400	1726
HasMember	B	908	Use of Uninitialized Resource	1400	1742
HasMember	B	909	Missing Initialization of Resource	1400	1746
HasMember	B	911	Improper Update of Reference Count	1400	1751
HasMember	C	913	Improper Control of Dynamically-Managed Code Resources	1400	1754
HasMember	B	920	Improper Restriction of Power Consumption	1400	1770
HasMember	C	922	Insecure Storage of Sensitive Information	1400	1773
HasMember	V	1042	Static Member Data Element outside of a Singleton Class Element	1400	1820
HasMember	B	1046	Creation of Immutable Text Using String Concatenation	1400	1824
HasMember	B	1049	Excessive Data Query Operations in a Large Data Table	1400	1827
HasMember	B	1050	Excessive Platform Resource Consumption within a Loop	1400	1829
HasMember	B	1051	Initialization with Hard-Coded Network Resource Configuration Data	1400	1830
HasMember	B	1052	Excessive Use of Hard-Coded Literals in Initialization	1400	1831
HasMember	B	1063	Creation of Class Instance within a Static Code Block	1400	1843
HasMember	B	1067	Excessive Execution of Sequential Searches of Data Resource	1400	1847
HasMember	B	1072	Data Resource Access without Use of Connection Pooling	1400	1853
HasMember	B	1073	Non-SQL Invokable Control Element with Excessive Number of Data Resource Accesses	1400	1854
HasMember	B	1084	Invokable Control Element with Excessive File or Data Access Operations	1400	1864
HasMember	B	1089	Large Data Table with Excessive Number of Indices	1400	1869
HasMember	B	1091	Use of Object without Invoking Destructor Method	1400	1871
HasMember	B	1094	Excessive Index Range Scan for a Data Resource	1400	1874
HasMember	C	1176	Inefficient CPU Computation	1400	1911
HasMember	B	1188	Insecure Default Initialization of Resource	1400	1913
HasMember	B	1221	Incorrect Register Defaults or Module Parameters	1400	1930
HasMember	C	1229	Creation of Emergent Resource	1400	1939

Nature	Type	ID	Name	V	Page
HasMember	B	1235	Incorrect Use of Autoboxing and Unboxing for Performance Critical Operations	1400	1949
HasMember	V	1239	Improper Zeroization of Hardware Register	1400	1954
HasMember	B	1246	Improper Write Handling in Limited-write Non-Volatile Memories	1400	1970
HasMember	B	1250	Improper Preservation of Consistency Between Independent Representations of Shared State	1400	1980
HasMember	B	1258	Exposure of Sensitive System Information Due to Uncleared Debug Information	1400	1999
HasMember	B	1266	Improper Scrubbing of Sensitive Data from Decommissioned Device	1400	2017
HasMember	B	1271	Uninitialized Value on Reset for Registers Holding Security Settings	1400	2028
HasMember	B	1272	Sensitive Information Uncleared Before Debug/Power State Transition	1400	2030
HasMember	B	1279	Cryptographic Operations are run Before Supporting Units are Ready	1400	2045
HasMember	B	1301	Insufficient or Incomplete Data Removal within Hardware Component	1400	2091
HasMember	B	1325	Improperly Controlled Sequential Memory Allocation	1400	2127
HasMember	V	1330	Remanent Data Readable after Memory Erase	1400	2138
HasMember	B	1333	Inefficient Regular Expression Complexity	1400	2146
HasMember	B	1342	Information Exposure through Microarchitectural State after Transient Execution	1400	2165
HasMember	B	1386	Insecure Operation on Windows Junction / Mount Point	1400	2176
HasMember	B	1389	Incorrect Parsing of Numbers with Different Radices	1400	2178

## Notes

### Mapping

Use for Mapping: Prohibited (this CWE ID must not be used to map to real-world vulnerabilities). Rationale: this entry is a Category. Using categories for mapping has been an actively discouraged practice since at least 2019. Categories are informal organizational groupings of weaknesses that help navigation and browsing by CWE users, but they are not weaknesses in themselves [REF-1330]. Comments: See member weaknesses of this category.

## Views

### View-604: Deprecated Entries

**View ID** : 604

**Type** : Implicit

#### Objective

CWE nodes in this view (slice) have been deprecated. There should be a reference pointing to the replacement in each deprecated weakness.

#### Filter

/Weakness\_Catalog/\*/\*[@Status='Deprecated']

#### Membership

Nature	Type	ID	Name	Page

### View-629: Weaknesses in OWASP Top Ten (2007)

**View ID** : 629

**Type** : Graph

#### Objective

CWE nodes in this view (graph) are associated with the OWASP Top Ten, as released in 2007. This view is considered obsolete as a newer version of the OWASP Top Ten is available.

#### Audience

##### Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2007 version), providing a good starting point for web application developers who want to code more securely.

##### Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten (2007 version), providing customers with a way of asking their software developers to follow minimum expectations for secure code.

### Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students.

### Membership

Nature	Type	ID	Name	Page
HasMember		712	OWASP Top Ten 2007 Category A1 - Cross Site Scripting (XSS)	2221
HasMember		713	OWASP Top Ten 2007 Category A2 - Injection Flaws	2221
HasMember		714	OWASP Top Ten 2007 Category A3 - Malicious File Execution	2222
HasMember		715	OWASP Top Ten 2007 Category A4 - Insecure Direct Object Reference	2223
HasMember		716	OWASP Top Ten 2007 Category A5 - Cross Site Request Forgery (CSRF)	2223
HasMember		717	OWASP Top Ten 2007 Category A6 - Information Leakage and Improper Error Handling	2224
HasMember		718	OWASP Top Ten 2007 Category A7 - Broken Authentication and Session Management	2224
HasMember		719	OWASP Top Ten 2007 Category A8 - Insecure Cryptographic Storage	2225
HasMember		720	OWASP Top Ten 2007 Category A9 - Insecure Communications	2225
HasMember		721	OWASP Top Ten 2007 Category A10 - Failure to Restrict URL Access	2226

### Notes

#### Relationship

The relationships in this view are a direct extraction of the CWE mappings that are in the 2007 OWASP document. CWE has changed since the release of that document.

## View-635: Weaknesses Originally Used by NVD from 2008 to 2016

View ID : 635

Type : Explicit

### Objective

CWE nodes in this view (slice) were used by NIST to categorize vulnerabilities within NVD, from 2008 to 2016. This original version has been used by many other projects.

## Membership

Nature	Type	ID	Name	Page
HasMember		16	Configuration	2195
HasMember		20	Improper Input Validation	20
HasMember		22	Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	33

HasMember		310	Cryptographic Issues	2207
HasMember		352	Cross-Site Request Forgery (CSRF)	851
HasMember		362	Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition')	871
HasMember		399	Resource Management Errors	2214

## Notes

### Maintenance

In Summer 2007, NIST began using this set of CWE elements to classify CVE entries within the National Vulnerability Database (NVD). The data was made publicly available beginning in 2008. In 2016, NIST began using a different list as derived from the "Weaknesses for Simplified Mapping of Published Vulnerabilities" view (CWE-1003).

## View-699: Software Development

**View ID :** 699  
**Type :** Graph

### Objective

This view organizes weaknesses around concepts that are frequently used or encountered in software development. This includes all aspects of the software development lifecycle including both architecture and implementation. Accordingly, this view can align closely with the perspectives of architects, developers, educators, and assessment vendors. It provides a variety of categories that are intended to simplify navigation, browsing, and mapping.

### Audience

#### Software Developers

Software developers (including architects, designers, coders, and testers) use this view to better understand potential mistakes that can be made in specific areas of their software application.

The use of concepts that developers are familiar with makes it easier to navigate this view, and filtering by Modes of Introduction can enable focus on a specific phase of the development lifecycle.

#### Educators

Educators use this view to teach future developers about the types of mistakes that are commonly made within specific parts of a codebase.

## Notes

### Other

The top level categories in this view represent commonly understood areas/terms within software development, and are meant to aid the user in identifying potential related weaknesses. It is possible for the same weakness to exist within multiple different categories.

### Other

This view attempts to present weaknesses in a simple and intuitive way. As such it targets a single level of abstraction. It is important to realize that not every CWE will be represented in this view. High-level class weaknesses and low-level variant weaknesses are mostly ignored. However, by exploring the weaknesses that are included, and following the defined relationships, one can find these higher and lower level weaknesses.

## View-700: Seven Pernicious Kingdoms

View ID : 700

Type : Graph

### Objective

This view (graph) organizes weaknesses using a hierarchical structure that is similar to that used by Seven Pernicious Kingdoms.

### Audience

#### Software Developers

This view is useful for developers because it is organized around concepts with which developers are familiar, and it focuses on weaknesses that can be detected using source code analysis tools.

### Membership

## View-711: Weaknesses in OWASP Top Ten (2004)

View ID : 711

Type : Graph

### Objective

CWE entries in this view (graph) are associated with the OWASP Top Ten, as released in 2004, and as required for compliance with PCI DSS version 1.1. This view is considered obsolete as a newer version of the OWASP Top Ten is available.

### Audience

#### Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2004 version), providing a good starting point for web application developers who want to code more securely, as well as complying with PCI DSS 1.1.

#### Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten, providing customers with a way of asking their software developers to follow minimum expectations for secure code, in compliance with PCI-DSS 1.1.

#### Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students. However, the 2007 version (CWE-629) might be more appropriate.

## Membership

Nature	Type	ID	Name	Page
HasMember		731	OWASP Top Ten 2004 Category A10 - Insecure Configuration Management	2233

## Notes

### Relationship

CWE relationships for this view were obtained by examining the OWASP document and mapping to any items that were specifically mentioned within the text of a category. As a result, this mapping is not complete with respect to all of CWE. In addition, some concepts were mentioned in multiple Top Ten items, which caused them to be mapped to multiple CWE categories. For example, SQL injection is mentioned in both A1 (CWE-722) and A6 (CWE-727) categories.

### Relationship

As of 2008, some parts of CWE were not fully clarified out in terms of weaknesses. When these areas were mentioned in the OWASP Top Ten, category entries were mapped, although general mapping practice would usually favor mapping only to weaknesses.

## View-734: Weaknesses Addressed by the CERT C Secure Coding Standard (2008)

**View ID :** 734

**Type :** Graph

### Objective

CWE entries in this view (graph) are fully or partially eliminated by following the guidance presented in the book "The CERT C Secure Coding Standard" published in 2008. This view is considered obsolete, as a newer version of the coding standard is available. This view statically represents the coding rules as they were in 2008.

### Audience

#### Software Developers

By following the CERT C Secure Coding Standard, developers will be able to fully or partially prevent the weaknesses that are identified in this view. In addition, developers can use a CWE coverage graph to determine which weaknesses are not directly addressed by the standard, which will help identify and resolve remaining gaps in training, tool acquisition, or other approaches for reducing weaknesses.

#### Product Customers

If a software developer claims to be following the CERT C Secure Coding standard, then customers can search for the weaknesses in this view in order to formulate independent evidence of that claim.

## Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could link them to the relevant Secure Coding Standard.

## View-750: Weaknesses in the 2009 CWE/SANS Top 25 Most Dangerous Programming Errors

**View ID :** 750

**Type :** Graph

### Objective

CWE entries in this view (graph) are listed in the 2009 CWE/SANS Top 25 Programming Errors. This view is considered obsolete as a newer version of the Top 25 is available.

### Audience

#### Software Developers

By following the Top 25, developers will be able to significantly reduce the number of weaknesses that occur in their software.

#### Product Customers

If a software developer claims to be following the Top 25, then customers can search for the weaknesses in this view in order to formulate independent evidence of that claim.

#### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could focus on the Top 25.

The relationships in this view were determined based on specific statements within the rules from the standard. Not all rules have direct relationships to individual weaknesses, although they likely have chaining relationships in specific circumstances.

## View-868: Weaknesses Addressed by the SEI CERT C++ Coding Standard (2016 Version)

**View ID** : 868

**Type** : Graph

### Objective

CWE entries in this view (graph) are fully or partially eliminated by following the SEI CERT C++ Coding Standard, as published in 2016. This view is no longer being actively maintained, since it statically represents the coding rules as they were in 2016.

### Audience

#### Software Developers

By following the CERT C++ Secure Coding Standard, developers will be able to fully or partially prevent the weaknesses that are identified in this view. In addition, developers can use a CWE coverage graph to determine which weaknesses are not directly addressed by the standard, which will help identify and resolve remaining gaps in training, tool acquisition, or other approaches for reducing weaknesses.

#### Product Customers

If a software developer claims to be following the CERT C++ Secure Coding Standard, then customers can search for the weaknesses in this view in order to formulate independent evidence of that claim.

#### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could link them to the relevant Secure Coding Standard.

## View-884: CWE Cross-section

**View ID :** 884  
**Type :** Explicit

## Objective

This view contains a selection of weaknesses that represent the variety of weaknesses that are captured in CWE, at a level of abstraction that is likely to be useful to most audiences. It can be used by researchers to determine how broad their theories, models, or tools are. It will also be used by the CWE content team in 2012 to focus quality improvement efforts for individual CWE entries.

## View-900: Weaknesses in the 2011 CWE/SANS Top 25 Most Dangerous Software Errors

View ID : 900

Type : Graph

### Objective

CWE entries in this view (graph) are listed in the 2011 CWE/SANS Top 25 Most Dangerous Software Errors.

### Audience

Software Developers

By following the Top 25, developers will be able to significantly reduce the number of weaknesses that occur in their software.

### Product Customers

If a software developer claims to be following the Top 25, then customers can use the weaknesses in this view in order to formulate independent evidence of that claim.

### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could focus on the Top 25.

### Membership

## View-928: Weaknesses in OWASP Top Ten (2013)

View ID : 928

2512

Type : Graph

## Objective

CWE nodes in this view (graph) are associated with the OWASP Top Ten, as released in 2013. This view is considered obsolete as a newer version of the OWASP Top Ten is available.

## Audience

### Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2013 version), providing a good starting point for web application developers who want to code more securely.

### Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten (2013 version), providing customers with a way of asking their software developers to follow minimum expectations for secure code.

### Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students.

## Notes

### Relationship

The relationships in this view have been pulled directly from the 2013 OWASP Top 10 document, either from the explicit mapping section, or from weakness types alluded to in the written sections.

## View-1000: Research Concepts

View ID : 1000

Type : Graph

### Objective

This view is intended to facilitate research into weaknesses, including their inter-dependencies, and can be leveraged to systematically identify theoretical gaps within CWE. It is mainly organized according to abstractions of behaviors instead of how they can be detected, where they appear in code, or when they are introduced in the development life cycle. By design, this view is expected to include every weakness within CWE.

### Audience

#### Academic Researchers

Academic researchers can use the high-level classes that lack a significant number of children to identify potential areas for future research.

#### Vulnerability Analysts

Those who perform vulnerability discovery/analysis use this view to identify related weaknesses that might be leveraged by following relationships between higher-level classes and bases.

#### Assessment Tool Vendors

Assessment vendors often use this view to help identify additional weaknesses that a tool may be able to detect as the relationships are more aligned with a tool's technical capabilities.

### Membership

Nature	Type	ID	Name	Page
HasMember	P	284	Improper Access Control	668
HasMember	P	435	Improper Interaction Between Multiple Correctly-Behaving Entities	1035
HasMember	P	664	Improper Control of a Resource Through its Lifetime	1424
HasMember	P	682	Incorrect Calculation	1462
HasMember	P	691	Insufficient Control Flow Management	1479
HasMember	P	693	Protection Mechanism Failure	1481
HasMember	P	697	Incorrect Comparison	1487
HasMember	P	703	Improper Check or Handling of Exceptional Conditions	1493
HasMember	P	707	Improper Neutralization	1500
HasMember	P	710	Improper Adherence to Coding Standards	1504

### Notes

#### Other

This view uses a deep hierarchical organization, with more levels of abstraction than other classification schemes. The top-level entries are called Pillars. Where possible, this view uses abstractions that do not consider particular languages, frameworks, technologies, life cycle development phases, frequency of occurrence, or types of resources. It explicitly identifies relationships that form chains and composites, which have not been a formal part of past classification efforts. Chains and composites might help explain why mutual exclusivity is difficult to achieve within security error taxonomies. This view is roughly aligned with MITRE's research

into vulnerability theory, especially with respect to behaviors and resources. Ideally, this view will only cover weakness-to-weakness relationships, with minimal overlap and zero categories. It is expected to include at least one parent/child relationship for every weakness within CWE.

## View-1003: Weaknesses for Simplified Mapping of Published Vulnerabilities

View ID : 1003

Type : Graph

### Objective

CWE entries in this view (graph) may be used to categorize potential weaknesses within sources that handle public, third-party vulnerability information, such as the National Vulnerability Database (NVD). By design, this view is incomplete; it is limited to a small number of the most commonly-seen weaknesses, so that it is easier for humans to use. This view uses a shallow hierarchy of two levels in order to simplify the complex, category-oriented navigation of the entire CWE corpus.

## Notes

### Maintenance

This view may change in any upcoming CWE version based on the experience of NVD analysts, public feedback, and the CWE Team - especially with respect to the CWE Top 25 analysis.

### Maintenance

This view has been modified significantly since its last major revision in 2016 (CWE-635 was used before 2016).

## View-1008: Architectural Concepts

View ID : 1008

Type : Graph

### Objective

This view organizes weaknesses according to common architectural security tactics. It is intended to assist architects in identifying potential mistakes that can be made when designing software.

### Audience

#### Software Developers

Architects that are part of a software development team may find this view useful as the weaknesses are organized by known security tactics, aiding the architect in embedding security throughout the design process instead of discovering weaknesses after the software has been built.

#### Educators

Educators may use this view as reference material when discussing security by design or architectural weaknesses, and the types of mistakes that can be made.

### Notes

#### Other

The top level categories in this view represent the individual tactics that are part of a secure-by-design approach to software development. The weaknesses that are members of each category contain information about how each is introduced relative to the software's architecture. Three different modes of introduction are used: Omission - caused by missing a security tactic when it is necessary. Commission - refers to incorrect choice of tactics which could result in undesirable consequences. Realization - appropriate security tactics are adopted but are incorrectly implemented.

## View-1026: Weaknesses in OWASP Top Ten (2017)

View ID : 1026

Type : Graph

### Objective

CWE nodes in this view (graph) are associated with the OWASP Top Ten, as released in 2017.

### Audience

## Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2017 version), providing a good starting point for web application developers who want to code more securely.

## Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten (2017 version), providing product customers with a way of asking their software development teams to follow minimum expectations for secure code.

## Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students.

## Membership

## View-1040: Quality Weaknesses with Indirect Security Impacts

View ID : 1040

2518

Type : Implicit

### Objective

CWE identifiers in this view (slice) are quality issues that only indirectly make it easier to introduce a vulnerability and/or make the vulnerability more difficult to detect or mitigate.

### Audience

#### Assessment Tool Vendors

This view makes it easier for assessment vendors to identify and improve coverage for quality-related weaknesses.

#### Software Developers

This view makes it easier for developers to identify and learn about issues that might make their code more difficult to maintain, perform efficiently or reliably, or secure.

#### Product Vendors

This view makes it easier for software vendors to identify important issues that may make their software more difficult to maintain, perform efficiently or reliably, or secure.

## View-1081: Entries with Maintenance Notes

View ID : 1081

Type : Implicit

### Objective

CWE entries in this view have maintenance notes. Maintenance notes are an indicator that an entry might change significantly in future versions. This view was created due to feedback from the CWE Board and participants in the CWE Compatibility Summit in March 2021.

### Audience

#### Assessment Tool Vendors

Assessment vendors may use this view to anticipate future changes to CWE that will help them to better prepare customers for important changes in CWE.

## View-1128: CISQ Quality Measures (2016)

View ID : 1128

Type : Graph

### Objective

This view outlines the most important software quality issues as identified by the Consortium for Information & Software Quality (CISQ) Automated Quality Characteristic Measures, released in 2016. These measures are derived from Object Management Group (OMG) standards.

### Audience

#### Software Developers

This view provides a good starting point for anyone involved in software development (including architects, designers, coders, and testers) to ensure that code quality issues are considered during the development process.

#### Product Vendors

This view can help product vendors understand code quality issues and convey an overall status of their software.

#### Assessment Tool Vendors

This view provides a good starting point for assessment tool vendors (e.g., vendors selling static analysis tools) who wish to understand what constitutes software with good code quality, and which quality issues may be of concern.

## View-1133: Weaknesses Addressed by the SEI CERT Oracle Coding Standard for Java

2520

View ID : 1133

Type : Graph

## Objective

CWE entries in this view (graph) are fully or partially eliminated by following the guidance presented in the online wiki that reflects that current rules and recommendations of the SEI CERT Oracle Coding Standard for Java.

## Audience

### Software Developers

By following the SEI CERT Oracle Coding Standard for Java, developers will be able to fully or partially prevent the weaknesses that are identified in this view. In addition, developers can use a CWE coverage graph to determine which weaknesses are not directly addressed by the standard, which will help identify and resolve remaining gaps in training, tool acquisition, or other approaches for reducing weaknesses.

### Product Customers

If a software developer claims to be following the SEI CERT Oracle Secure Coding Standard for Java, then customers can search for the weaknesses in this view in order to formulate independent evidence of that claim.

### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could link them to the relevant Secure Coding Standard.

## View-1194: Hardware Design

**View ID :** 1194

**Type :** Graph

## Objective

This view organizes weaknesses around concepts that are frequently used or encountered in hardware design. Accordingly, this view can align closely with the perspectives of designers, manufacturers, educators, and assessment vendors. It provides a variety of categories that are intended to simplify navigation, browsing, and mapping.

## Audience

### Hardware Designers

Hardware Designers use this view to better understand potential mistakes that can be made in specific areas of their IP design. The use of concepts with which hardware designers are familiar makes it easier to navigate.

### Educators

Educators use this view to teach future professionals about the types of mistakes that are commonly made in hardware design.

## Notes

### Other

The top level categories in this view represent commonly understood areas/terms within hardware design, and are meant to aid the user in identifying potential related weaknesses. It is possible for the same weakness to exist within multiple different categories.

### Other

This view attempts to present weaknesses in a simple and intuitive way. As such it targets a single level of abstraction. It is important to realize that not every CWE will be represented in this view. High-level class weaknesses and low-level variant weaknesses are mostly ignored. However, by exploring the weaknesses that are included, and following the defined relationships, one can find these higher and lower level weaknesses.

## View-1200: Weaknesses in the 2019 CWE Top 25 Most Dangerous Software Errors

View ID : 1200

Type : Graph

### Objective

CWE entries in this view are listed in the 2019 CWE Top 25 Most Dangerous Software Errors.

### Audience

#### Software Developers

By following the Top 25, developers will be able to significantly reduce the number of weaknesses that occur in their software.

#### Product Customers

If a software developer claims to be following the Top 25, then customers can use the weaknesses in this view in order to formulate independent evidence of that claim.

#### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could focus on the Top 25.

## View-1305: CISQ Quality Measures (2020)

**View ID :** 1305

**Type :** Graph

### Objective

This view outlines the most important software quality issues as identified by the Consortium for Information & Software Quality (CISQ) Automated Quality Characteristic Measures, released in 2020. These measures are derived from Object Management Group (OMG) standards.

### Audience

#### Software Developers

This view provides a good starting point for anyone involved in software development (including architects, designers, coders, and testers) to ensure that code quality issues are considered during the development process.

#### Product Vendors

This view can help product vendors understand code quality issues and convey an overall status of their software.

### Assessment Tool Vendors

This view provides a good starting point for assessment tool vendors (e.g., vendors selling static analysis tools) who wish to understand what constitutes software with good code quality, and which quality issues may be of concern.

### Membership

Nature	Type	ID	Name	Page

## View-1337: Weaknesses in the 2021 CWE Top 25 Most Dangerous Software Weaknesses

View ID : 1337

Type : Graph

### Objective

CWE entries in this view are listed in the 2021 CWE Top 25 Most Dangerous Software Weaknesses.

### Audience

#### Software Developers

By following the CWE Top 25, developers are able to significantly reduce the number of weaknesses that occur in their software.

#### Product Customers

Customers can use the weaknesses in this view in order to formulate independent evidence of a claim by a product vendor to have eliminated / mitigated the most dangerous weaknesses.

#### Educators

Educators can use this view to focus curriculum and teachings on the most dangerous weaknesses.

## View-1343: Weaknesses in the 2021 CWE Most Important Hardware Weaknesses List

View ID : 1343

Type : Explicit

### Objective

CWE entries in this view are listed in the 2021 CWE Most Important Hardware Weaknesses List, as determined by the Hardware CWE Special Interest Group (HW CWE SIG).

### Audience

#### Hardware Designers

By following this list, hardware designers and implementers are able to significantly reduce the number of weaknesses that occur in their products.

#### Product Customers

Customers can use the weaknesses in this view in order to formulate independent evidence of a claim by a product vendor to have eliminated / mitigated the most dangerous weaknesses.

#### Educators

Educators can use this view to focus curriculum on the most important hardware weaknesses.

### Membership

## View-1344: Weaknesses in OWASP Top Ten (2021)

View ID : 1344

Type : Graph

### Objective

CWE entries in this view (graph) are associated with the OWASP Top Ten, as released in 2021.

### Audience

#### Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2021 version), providing a good starting point for web application developers who want to code more securely.

#### Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten (2021 version), providing product customers with a way of asking their software development teams to follow minimum expectations for secure code.

#### Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students.

## Notes

### Maintenance

As of CWE 4.6, the relationships in this view were pulled directly from the CWE mappings cited in the 2021 OWASP Top Ten. These mappings include categories and high-level weaknesses. One mapping to a deprecated entry was removed. The CWE Program will work with OWASP to improve these mappings, possibly requiring modifications to CWE itself.

## View-1358: Weaknesses in SEI ETF Categories of Security Vulnerabilities in ICS

**View ID** : 1358

**Type** : Graph

### Objective

CWE entries in this view (graph) are associated with the Categories of Security Vulnerabilities in ICS, as published by the Securing Energy Infrastructure Executive Task Force (SEI ETF) in March 2022. Weaknesses and categories in this view are focused on issues that affect ICS (Industrial Control Systems) but have not been traditionally covered by CWE in the past due to its earlier emphasis on enterprise IT software. Note: weaknesses in this view are based on "Nearest IT Neighbor" recommendations and other suggestions by the CWE team. These relationships are likely to change in future CWE versions.

### Audience

#### Hardware Designers

ICS/OT hardware designers can use this view to ensure a minimal set of weaknesses that should be avoided or mitigated during the design process.

#### Product Vendors

Product vendors can use this view to ensure that all aspects of the product lifecycle address these weaknesses.

#### Assessment Tool Vendors

Assessment tool vendors that help to assess potential weaknesses, or avoid them, can use this view to improve their tool's coverage to address more weaknesses.

#### Academic Researchers

Academic researchers can use this view to identify potential research opportunities that could produce better methods for detection or avoidance of weaknesses in ICS/OT products.

### Membership

Nature	Type	ID	Name	Page
HasMember		1359	ICS Communications	2431
HasMember		1360	ICS Dependencies (& Architecture)	2432
HasMember		1361	ICS Supply Chain	2432
HasMember		1362	ICS Engineering (Constructions/Deployment)	2433
HasMember		1363	ICS Operations (& Maintenance)	2434

### Notes

#### Relationship

Relationships in this view are not authoritative and subject to change. See Maintenance notes.

#### Maintenance

This view was created in CWE 4.7 to facilitate and illuminate discussion about weaknesses in ICS with [REF-1248] as a starting point. After the release of CWE 4.9 in October 2022, this has been under active review by members of the "Boosting CWE" subgroup of the CWE-CAPEC ICS/OT Special Interest Group (SIG). Relationships are still subject to change. In addition, there may be some issues in [REF-1248] that are outside of the current scope of CWE, which will require consultation with many CWE stakeholders to resolve.

## View-1400: Comprehensive Categorization for Software Assurance Trends

**View ID :** 1400

**Type :** Graph

### Objective

This view organizes weaknesses around categories that are of interest to large-scale software assurance research to support the elimination of weaknesses using tactics such as secure language development. It is also intended to help tracking weakness trends in publicly disclosed vulnerability data. This view is comprehensive in that every weakness must be contained in it, unlike most other views that only use a subset of weaknesses. This view is structured with categories at the top level, with a second level of only weaknesses. Relationships among the weaknesses presented under the research view (CWE-1000) are not shown.

Each weakness is added to only one category. All categories are mutually exclusive; that is, no weakness can be a member of more than one category. While weaknesses defy strict categorization along only one characteristic, the forced bucketing into a single category can simplify certain kinds of analysis.

Note that the size of each category can vary widely because (1) CWE is not as well fleshed-out in some areas compared to others; (2) abstraction of the CWEs in the grouping might go down to Variant level for some buckets, versus others.

### Audience

#### Academic Researchers

Researchers can use this view to evaluate the breadth and depth of software assurance with respect to mitigating and managing weaknesses before they become vulnerabilities.

**Membership**

HasMember	C	1412	Comprehensive Categorization: Poor Coding Practices	2476
HasMember	C	1413	Comprehensive Categorization: Protection Mechanism Failure	2480
HasMember	C	1414	Comprehensive Categorization: Randomness	2481
HasMember	C	1415	Comprehensive Categorization: Resource Control	2482
HasMember	C	1416	Comprehensive Categorization: Resource Lifecycle Management	2483
HasMember	C	1417	Comprehensive Categorization: Sensitive Information Exposure	2486
HasMember	C	1418	Comprehensive Categorization: Violation of Secure Design Principles	2488

**Notes****Relationship**

This view is different than the software development view (CWE-699) because this view is expected to include all weaknesses regardless of abstraction, while view 699 uses a largely-fixed Base level of abstraction related only to software weaknesses. It is different from the Research view (CWE-1000) because while comprehensive for all weaknesses, the view uses a deep hierarchical structure and excludes categories.

## Graph View: CWE-629: Weaknesses in OWASP Top Ten (2007)

- C** CWE-712: OWASP Top Ten 2007 Category A1 - Cross Site Scripting (XSS) (p.2221)
  - B** CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
- C** CWE-713: OWASP Top Ten 2007 Category A2 - Injection Flaws (p.2221)
  - G** CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.144)
  - B** CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
  - B** CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.212)
  - B** CWE-91: XML Injection (aka Blind XPath Injection) (p.214)
  - B** CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.217)
- C** CWE-714: OWASP Top Ten 2007 Category A3 - Malicious File Execution (p.2222)
  - B** CWE-434: Unrestricted Upload of File with Dangerous Type (p.1028)
  - B** CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
  - V** CWE-95: Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection') (p.225)
  - V** CWE-98: Improper Control of Filename for Include/Require Statement in PHP Program ('PHP Remote File Inclusion') (p.235)
- C** CWE-715: OWASP Top Ten 2007 Category A4 - Insecure Direct Object Reference (p.2223)
  - B** CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - B** CWE-472: External Control of Assumed-Immutable Web Parameter (p.1101)
  - B** CWE-639: Authorization Bypass Through User-Controlled Key (p.1380)
- C** CWE-716: OWASP Top Ten 2007 Category A5 - Cross Site Request Forgery (CSRF) (p.2223)
  - B** CWE-352: Cross-Site Request Forgery (CSRF) (p.851)
- C** CWE-717: OWASP Top Ten 2007 Category A6 - Information Leakage and Improper Error Handling (p.2224)
  - G** CWE-200: Exposure of Sensitive Information to an Unauthorized Actor (p.501)
  - B** CWE-203: Observable Discrepancy (p.514)
  - B** CWE-209: Generation of Error Message Containing Sensitive Information (p.528)
  - B** CWE-215: Insertion of Sensitive Information Into Debugging Code (p.545)
- C** CWE-718: OWASP Top Ten 2007 Category A7 - Broken Authentication and Session Management (p.2224)
  - G** CWE-287: Improper Authentication (p.681)
  - B** CWE-301: Reflection Attack in an Authentication Protocol (p.720)
  - G** CWE-522: Insufficiently Protected Credentials (p.1201)
- C** CWE-719: OWASP Top Ten 2007 Category A8 - Insecure Cryptographic Storage (p.2225)
  - G** CWE-311: Missing Encryption of Sensitive Data (p.744)
  - V** CWE-321: Use of Hard-coded Cryptographic Key (p.772)
  - B** CWE-325: Missing Cryptographic Step (p.781)
  - G** CWE-326: Inadequate Encryption Strength (p.783)
- C** CWE-720: OWASP Top Ten 2007 Category A9 - Insecure Communications (p.2225)
  - G** CWE-311: Missing Encryption of Sensitive Data (p.744)
  - V** CWE-321: Use of Hard-coded Cryptographic Key (p.772)
  - B** CWE-325: Missing Cryptographic Step (p.781)
  - G** CWE-326: Inadequate Encryption Strength (p.783)
- C** CWE-721: OWASP Top Ten 2007 Category A10 - Failure to Restrict URL Access (p.2226)
  - G** CWE-285: Improper Authorization (p.673)
  - B** CWE-288: Authentication Bypass Using an Alternate Path or Channel (p.688)
  - B** CWE-425: Direct Request ('Forced Browsing') (p.1005)

## Graph View: CWE-631: DEPRECATED: Resource-specific Weaknesses

## Graph View: CWE-699: Software Development

- C** CWE-1228: API / Function Errors (*p.2413*)
  - B** CWE-242: Use of Inherently Dangerous Function (*p.577*)
  - B** CWE-474: Use of Function with Inconsistent Implementations (*p.1106*)
  - B** CWE-475: Undefined Behavior for Input to API (*p.1108*)
  - B** CWE-477: Use of Obsolete Function (*p.1116*)
  - B** CWE-676: Use of Potentially Dangerous Function (*p.1453*)
  - B** CWE-695: Use of Low-Level Functionality (*p.1485*)
  - B** CWE-749: Exposed Dangerous Method or Function (*p.1518*)
- C** CWE-1210: Audit / Logging Errors (*p.2404*)
  - B** CWE-117: Improper Output Neutralization for Logs (*p.287*)
  - B** CWE-222: Truncation of Security-relevant Information (*p.551*)
  - B** CWE-223: Omission of Security-relevant Information (*p.552*)
  - B** CWE-224: Obscured Security-relevant Information by Alternate Name (*p.554*)
  - B** CWE-778: Insufficient Logging (*p.1590*)
  - B** CWE-779: Logging of Excessive Data (*p.1594*)
- C** CWE-1211: Authentication Errors (*p.2405*)
  - B** CWE-289: Authentication Bypass by Alternate Name (*p.690*)
  - B** CWE-290: Authentication Bypass by Spoofing (*p.692*)
  - B** CWE-294: Authentication Bypass by Capture-replay (*p.699*)
  - B** CWE-295: Improper Certificate Validation (*p.701*)
  - B** CWE-301: Reflection Attack in an Authentication Protocol (*p.720*)
  - B** CWE-303: Incorrect Implementation of Authentication Algorithm (*p.725*)
  - B** CWE-305: Authentication Bypass by Primary Weakness (*p.727*)
  - B** CWE-306: Missing Authentication for Critical Function (*p.729*)
  - B** CWE-307: Improper Restriction of Excessive Authentication Attempts (*p.735*)
  - B** CWE-308: Use of Single-factor Authentication (*p.739*)
  - B** CWE-309: Use of Password System for Primary Authentication (*p.741*)
  - B** CWE-322: Key Exchange without Entity Authentication (*p.776*)
  - B** CWE-603: Use of Client-Side Authentication (*p.1329*)
  - B** CWE-645: Overly Restrictive Account Lockout Mechanism (*p.1397*)
  - B** CWE-804: Guessable CAPTCHA (*p.1652*)
  - B** CWE-836: Use of Password Hash Instead of Password for Authentication (*p.1711*)
- C** CWE-1212: Authorization Errors (*p.2406*)
  - B** CWE-425: Direct Request ('Forced Browsing') (*p.1005*)
  - B** CWE-551: Incorrect Behavior Order: Authorization Before Parsing and Canonicalization (*p.1239*)
  - B** CWE-552: Files or Directories Accessible to External Parties (*p.1240*)
  - B** CWE-639: Authorization Bypass Through User-Controlled Key (*p.1380*)
  - B** CWE-653: Improper Isolation or Compartmentalization (*p.1410*)
  - B** CWE-939: Improper Authorization in Handler for Custom URL Scheme (*p.1785*)
  - B** CWE-842: Placement of User into Incorrect Group (*p.1725*)
  - B** CWE-1220: Insufficient Granularity of Access Control (*p.1928*)
  - B** CWE-1230: Exposure of Sensitive Information Through Metadata (*p.1940*)
- C** CWE-1006: Bad Coding Practices (*p.2339*)
  - B** CWE-358: Improperly Implemented Security Check for Standard (*p.864*)
  - B** CWE-360: Trust of System Event Data (*p.870*)
  - B** CWE-478: Missing Default Case in Multiple Condition Expression (*p.1119*)
  - B** CWE-487: Reliance on Package-level Scope (*p.1144*)
  - B** CWE-489: Active Debug Code (*p.1148*)
  - B** CWE-547: Use of Hard-coded, Security-relevant Constants (*p.1234*)
  - B** CWE-561: Dead Code (*p.1250*)
  - B** CWE-562: Return of Stack Variable Address (*p.1253*)
  - B** CWE-563: Assignment to Variable without Use (*p.1255*)
  - B** CWE-581: Object Model Violation: Just One of Equals and Hashcode Defined (*p.1287*)

- ⓑ CWE-586: Explicit Call to Finalize() (p.1295)
- ⓑ CWE-605: Multiple Binds to the Same Port (p.1331)
- ⓑ CWE-628: Function Call with Incorrectly Specified Arguments (p.1372)
- ⓑ CWE-654: Reliance on a Single Factor in a Security Decision (p.1412)
- ⓐ CWE-656: Reliance on Security Through Obscurity (p.1417)
- ⓑ CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1483)
- ⓑ CWE-807: Reliance on Untrusted Inputs in a Security Decision (p.1665)
- ⓑ CWE-1041: Use of Redundant Code (p.1818)
- ⓑ CWE-1043: Data Element Aggregating an Excessively Large Number of Non-Primitive Elements (p.1821)
- ⓑ CWE-1044: Architecture with Number of Horizontal Layers Outside of Expected Range (p.1822)
- ⓑ CWE-1045: Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor (p.1823)
- ⓑ CWE-1046: Creation of Immutable Text Using String Concatenation (p.1824)
- ⓑ CWE-1048: Invokable Control Element with Large Number of Outward Calls (p.1826)
- ⓑ CWE-1049: Excessive Data Query Operations in a Large Data Table (p.1827)
- ⓑ CWE-1050: Excessive Platform Resource Consumption within a Loop (p.1829)
- ⓑ CWE-1063: Creation of Class Instance within a Static Code Block (p.1843)
- ⓑ CWE-1065: Runtime Resource Management Control Element in a Component Built to Run on Application Servers (p.1845)
- ⓑ CWE-1066: Missing Serialization Control Element (p.1846)
- ⓑ CWE-1067: Excessive Execution of Sequential Searches of Data Resource (p.1847)
- ⓑ CWE-1070: Serializable Data Element Containing non-Serializable Item Elements (p.1851)
- ⓑ CWE-1071: Empty Code Block (p.1852)
- ⓑ CWE-1072: Data Resource Access without Use of Connection Pooling (p.1853)
- ⓑ CWE-1073: Non-SQL Invokable Control Element with Excessive Number of Data Resource Accesses (p.1854)
- ⓑ CWE-1079: Parent Class without Virtual Destructor Method (p.1860)
- ⓑ CWE-1082: Class Instance Self Destruction Control Element (p.1862)
- ⓑ CWE-1084: Invokable Control Element with Excessive File or Data Access Operations (p.1864)
- ⓑ CWE-1085: Invokable Control Element with Excessive Volume of Commented-out Code (p.1865)
- ⓑ CWE-1087: Class with Virtual Method without a Virtual Destructor (p.1867)
- ⓑ CWE-1089: Large Data Table with Excessive Number of Indices (p.1869)
- ⓑ CWE-1092: Use of Same Invokable Control Element in Multiple Architectural Layers (p.1872)
- ⓑ CWE-1094: Excessive Index Range Scan for a Data Resource (p.1874)
- ⓑ CWE-1097: Persistent Storable Data Element without Associated Comparison Control Element (p.1878)
- ⓑ CWE-1098: Data Element containing Pointer Item without Proper Copy Control Element (p.1879)
- ⓑ CWE-1099: Inconsistent Naming Conventions for Identifiers (p.1880)
- ⓑ CWE-1101: Reliance on Runtime Component in Generated Code (p.1882)
- ⓑ CWE-1102: Reliance on Machine-Dependent Data Representation (p.1882)
- ⓑ CWE-1103: Use of Platform-Dependent Third Party Components (p.1883)
- ⓑ CWE-1104: Use of Unmaintained Third Party Components (p.1884)
- ⓑ CWE-1106: Insufficient Use of Symbolic Constants (p.1886)
- ⓑ CWE-1107: Insufficient Isolation of Symbolic Constant Definitions (p.1887)
- ⓑ CWE-1108: Excessive Reliance on Global Variables (p.1888)
- ⓑ CWE-1109: Use of Same Variable for Multiple Purposes (p.1889)
- ⓑ CWE-1113: Inappropriate Comment Style (p.1893)
- ⓑ CWE-1114: Inappropriate Whitespace Style (p.1894)
- ⓑ CWE-1115: Source Code Element without Standard Prologue (p.1894)
- ⓑ CWE-1116: Inaccurate Comments (p.1895)
- ⓑ CWE-1117: Callable with Insufficient Behavioral Summary (p.1897)
- ⓑ CWE-1126: Declaration of Variable with Unnecessarily Wide Scope (p.1906)
- ⓑ CWE-1127: Compilation with Insufficient Warnings or Errors (p.1907)
- ⓑ CWE-1235: Incorrect Use of Autoboxing and Unboxing for Performance Critical Operations (p.1949)

- C** CWE-438: Behavioral Problems (p.2217)
  - B** CWE-115: Misinterpretation of Input (p.279)
  - B** CWE-179: Incorrect Behavior Order: Early Validation (p.445)
  - B** CWE-408: Incorrect Behavior Order: Early Amplification (p.976)
  - B** CWE-437: Incomplete Model of Endpoint Features (p.1039)
  - B** CWE-439: Behavioral Change in New Version or Environment (p.1040)
  - B** CWE-440: Expected Behavior Violation (p.1041)
  - B** CWE-444: Inconsistent Interpretation of HTTP Requests ('HTTP Request/Response Smuggling') (p.1046)
  - B** CWE-480: Use of Incorrect Operator (p.1127)
  - B** CWE-483: Incorrect Block Delimitation (p.1136)
  - B** CWE-484: Omitted Break Statement in Switch (p.1138)
  - B** CWE-551: Incorrect Behavior Order: Authorization Before Parsing and Canonicalization (p.1239)
  - B** CWE-698: Execution After Redirect (EAR) (p.1491)
  - B** CWE-733: Compiler Optimization Removal or Modification of Security-critical Code (p.1516)
  - B** CWE-783: Operator Precedence Logic Error (p.1602)
  - B** CWE-835: Loop with Unreachable Exit Condition ('Infinite Loop') (p.1707)
  - B** CWE-837: Improper Enforcement of a Single, Unique Action (p.1712)
  - B** CWE-841: Improper Enforcement of Behavioral Workflow (p.1721)
  - B** CWE-1025: Comparison Using Wrong Factors (p.1812)
  - B** CWE-1037: Processor Optimization Removal or Modification of Security-critical Code (p.1813)
- C** CWE-840: Business Logic Errors (p.2259)
  - B** CWE-283: Unverified Ownership (p.667)
  - B** CWE-639: Authorization Bypass Through User-Controlled Key (p.1380)
  - B** CWE-640: Weak Password Recovery Mechanism for Forgotten Password (p.1383)
  - B** CWE-708: Incorrect Ownership Assignment (p.1502)
  - B** CWE-770: Allocation of Resources Without Limits or Throttling (p.1566)
  - B** CWE-826: Premature Release of Resource During Expected Lifetime (p.1685)
  - B** CWE-837: Improper Enforcement of a Single, Unique Action (p.1712)
  - B** CWE-841: Improper Enforcement of Behavioral Workflow (p.1721)
- C** CWE-417: Communication Channel Errors (p.2215)
  - B** CWE-322: Key Exchange without Entity Authentication (p.776)
  - C** CWE-346: Origin Validation Error (p.837)
  - B** CWE-385: Covert Timing Channel (p.922)
  - B** CWE-419: Unprotected Primary Channel (p.998)
  - B** CWE-420: Unprotected Alternate Channel (p.999)
  - B** CWE-425: Direct Request ('Forced Browsing') (p.1005)
  - B** CWE-515: Covert Storage Channel (p.1196)
  - B** CWE-918: Server-Side Request Forgery (SSRF) (p.1768)
  - B** CWE-924: Improper Enforcement of Message Integrity During Transmission in a Communication Channel (p.1776)
  - B** CWE-940: Improper Verification of Source of a Communication Channel (p.1788)
  - B** CWE-941: Incorrectly Specified Destination in a Communication Channel (p.1791)
  - B** CWE-1327: Binding to an Unrestricted IP Address (p.2131)
- C** CWE-1226: Complexity Issues (p.2412)
  - B** CWE-1043: Data Element Aggregating an Excessively Large Number of Non-Primitive Elements (p.1821)
  - B** CWE-1047: Modules with Circular Dependencies (p.1825)
  - B** CWE-1055: Multiple Inheritance from Concrete Classes (p.1834)
  - B** CWE-1056: Invokable Control Element with Variadic Parameters (p.1835)
  - B** CWE-1060: Excessive Number of Inefficient Server-Side Data Accesses (p.1840)
  - B** CWE-1064: Invokable Control Element with Signature Containing an Excessive Number of Parameters (p.1844)
  - B** CWE-1074: Class with Excessively Deep Inheritance (p.1855)
  - B** CWE-1075: Unconditional Control Flow Transfer outside of Switch Block (p.1856)

- B CWE-1080: Source Code File with Excessive Number of Lines of Code (p.1861)
- B CWE-1086: Class with Excessive Number of Child Classes (p.1866)
- B CWE-1095: Loop Condition Value Update within the Loop (p.1875)
- B CWE-1119: Excessive Use of Unconditional Branching (p.1899)
- B CWE-1121: Excessive McCabe Cyclomatic Complexity (p.1901)
- B CWE-1122: Excessive Halstead Complexity (p.1902)
- B CWE-1123: Excessive Use of Self-Modifying Code (p.1903)
- B CWE-1124: Excessively Deep Nesting (p.1904)
- B CWE-1125: Excessive Attack Surface (p.1905)
- B CWE-1333: Inefficient Regular Expression Complexity (p.2146)
- C CWE-557: Concurrency Issues (p.2220)
  - B CWE-364: Signal Handler Race Condition (p.881)
  - B CWE-366: Race Condition within a Thread (p.886)
  - B CWE-367: Time-of-check Time-of-use (TOCTOU) Race Condition (p.889)
  - B CWE-368: Context Switching Race Condition (p.894)
  - B CWE-386: Symbolic Name not Mapping to Correct Object (p.924)
  - B CWE-421: Race Condition During Access to Alternate Channel (p.1001)
  - B CWE-663: Use of a Non-reentrant Function in a Concurrent Context (p.1423)
  - B CWE-820: Missing Synchronization (p.1671)
  - B CWE-821: Incorrect Synchronization (p.1673)
  - B CWE-1058: Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element (p.1837)
  - B CWE-1322: Use of Blocking Code in Single-threaded, Non-blocking Context (p.2124)
- C CWE-255: Credentials Management Errors (p.2203)
  - B CWE-256: Plaintext Storage of a Password (p.605)
  - B CWE-257: Storing Passwords in a Recoverable Format (p.608)
  - B CWE-260: Password in Configuration File (p.618)
  - B CWE-261: Weak Encoding for Password (p.621)
  - B CWE-262: Not Using Password Aging (p.623)
  - B CWE-263: Password Aging with Long Expiration (p.625)
  - B CWE-324: Use of a Key Past its Expiration Date (p.779)
  - B CWE-521: Weak Password Requirements (p.1199)
  - B CWE-523: Unprotected Transport of Credentials (p.1206)
  - B CWE-549: Missing Password Field Masking (p.1237)
  - B CWE-620: Unverified Password Change (p.1357)
  - B CWE-640: Weak Password Recovery Mechanism for Forgotten Password (p.1383)
  - B CWE-798: Use of Hard-coded Credentials (p.1642)
  - B CWE-916: Use of Password Hash With Insufficient Computational Effort (p.1761)
  - B CWE-1392: Use of Default Credentials (p.2186)
- C CWE-310: Cryptographic Issues (p.2207)
  - B CWE-261: Weak Encoding for Password (p.621)
  - B CWE-324: Use of a Key Past its Expiration Date (p.779)
  - B CWE-325: Missing Cryptographic Step (p.781)
  - B CWE-328: Use of Weak Hash (p.792)
  - B CWE-331: Insufficient Entropy (p.806)
  - B CWE-334: Small Space of Random Values (p.812)
  - B CWE-335: Incorrect Usage of Seeds in Pseudo-Random Number Generator (PRNG) (p.814)
  - B CWE-338: Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG) (p.821)
  - B CWE-347: Improper Verification of Cryptographic Signature (p.840)
  - B CWE-916: Use of Password Hash With Insufficient Computational Effort (p.1761)
  - B CWE-1204: Generation of Weak Initialization Vector (IV) (p.1923)
  - B CWE-1240: Use of a Cryptographic Primitive with a Risky Implementation (p.1955)
- C CWE-320: Key Management Errors (p.2208)
  - B CWE-322: Key Exchange without Entity Authentication (p.776)

- B CWE-323: Reusing a Nonce, Key Pair in Encryption (p.777)
- B CWE-324: Use of a Key Past its Expiration Date (p.779)
- B CWE-798: Use of Hard-coded Credentials (p.1642)
- C CWE-1214: Data Integrity Issues (p.2407)
  - B CWE-322: Key Exchange without Entity Authentication (p.776)
  - C CWE-346: Origin Validation Error (p.837)
  - B CWE-347: Improper Verification of Cryptographic Signature (p.840)
  - B CWE-348: Use of Less Trusted Source (p.842)
  - B CWE-349: Acceptance of Extraneous Untrusted Data With Trusted Data (p.844)
  - B CWE-351: Insufficient Type Distinction (p.849)
  - B CWE-353: Missing Support for Integrity Check (p.857)
  - B CWE-354: Improper Validation of Integrity Check Value (p.859)
  - B CWE-494: Download of Code Without Integrity Check (p.1161)
  - B CWE-565: Reliance on Cookies without Validation and Integrity Checking (p.1258)
  - B CWE-649: Reliance on Obfuscation or Encryption of Security-Relevant Inputs without Integrity Checking (p.1403)
  - B CWE-829: Inclusion of Functionality from Untrusted Control Sphere (p.1692)
  - B CWE-924: Improper Enforcement of Message Integrity During Transmission in a Communication Channel (p.1776)
- C CWE-19: Data Processing Errors (p.2196)
  - B CWE-130: Improper Handling of Length Parameter Inconsistency (p.348)
  - B CWE-166: Improper Handling of Missing Special Element (p.420)
  - B CWE-167: Improper Handling of Additional Special Element (p.422)
  - B CWE-168: Improper Handling of Inconsistent Special Elements (p.423)
  - B CWE-178: Improper Handling of Case Sensitivity (p.441)
  - B CWE-182: Collapse of Data into Unsafe Value (p.452)
  - B CWE-186: Overly Restrictive Regular Expression (p.463)
  - B CWE-229: Improper Handling of Values (p.561)
  - B CWE-233: Improper Handling of Parameters (p.565)
  - B CWE-237: Improper Handling of Structural Elements (p.572)
  - B CWE-241: Improper Handling of Unexpected Data Type (p.575)
  - B CWE-409: Improper Handling of Highly Compressed Data (Data Amplification) (p.978)
  - B CWE-472: External Control of Assumed-Immutable Web Parameter (p.1101)
  - B CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1319)
  - B CWE-611: Improper Restriction of XML External Entity Reference (p.1341)
  - B CWE-624: Executable Regular Expression Error (p.1364)
  - B CWE-625: Permissive Regular Expression (p.1365)
  - B CWE-776: Improper Restriction of Recursive Entity References in DTDs ('XML Entity Expansion') (p.1585)
  - B CWE-1024: Comparison of Incompatible Types (p.1811)
- C CWE-137: Data Neutralization Issues (p.2198)
  - B CWE-76: Improper Neutralization of Equivalent Special Elements (p.143)
  - B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
  - B CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
  - B CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.193)
  - B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
  - B CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.212)
  - B CWE-91: XML Injection (aka Blind XPath Injection) (p.214)
  - B CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.217)
  - B CWE-94: Improper Control of Generation of Code ('Code Injection') (p.219)
  - B CWE-117: Improper Output Neutralization for Logs (p.287)
  - B CWE-140: Improper Neutralization of Delimiters (p.374)

- B CWE-170: Improper Null Termination (p.425)
- B CWE-463: Deletion of Data Structure Sentinel (p.1083)
- B CWE-464: Addition of Data Structure Sentinel (p.1085)
- B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1385)
- B CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1483)
- B CWE-791: Incomplete Filtering of Special Elements (p.1632)
- B CWE-838: Inappropriate Encoding for Output Context (p.1713)
- B CWE-917: Improper Neutralization of Special Elements used in an Expression Language Statement ('Expression Language Injection') (p.1765)
- B CWE-1236: Improper Neutralization of Formula Elements in a CSV File (p.1951)
- C CWE-1225: Documentation Issues (p.2411)
- B CWE-1053: Missing Documentation for Design (p.1832)
- B CWE-1068: Inconsistency Between Implementation and Documented Design (p.1848)
- B CWE-1110: Incomplete Design Documentation (p.1890)
- B CWE-1111: Incomplete I/O Documentation (p.1891)
- B CWE-1112: Incomplete Documentation of Program Execution (p.1892)
- B CWE-1118: Insufficient Documentation of Error Handling Techniques (p.1898)
- C CWE-1219: File Handling Issues (p.2410)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
- B CWE-41: Improper Resolution of Path Equivalence (p.86)
- B CWE-59: Improper Link Resolution Before File Access ('Link Following') (p.111)
- B CWE-66: Improper Handling of File Names that Identify Virtual Resources (p.124)
- B CWE-378: Creation of Temporary File With Insecure Permissions (p.911)
- B CWE-379: Creation of Temporary File in Directory with Insecure Permissions (p.913)
- B CWE-426: Untrusted Search Path (p.1008)
- B CWE-427: Uncontrolled Search Path Element (p.1013)
- B CWE-428: Unquoted Search Path or Element (p.1019)
- C CWE-1227: Encapsulation Issues (p.2413)
- B CWE-1054: Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (p.1833)
- B CWE-1057: Data Access Operations Outside of Expected Data Manager Component (p.1836)
- B CWE-1062: Parent Class with References to Child Class (p.1842)
- B CWE-1083: Data Access from Outside Expected Data Manager Component (p.1863)
- B CWE-1090: Method Containing Access of a Member Element from Another Class (p.1870)
- B CWE-1100: Insufficient Isolation of System-Dependent Functions (p.1881)
- B CWE-1105: Insufficient Encapsulation of Machine-Dependent Functionality (p.1885)
- C CWE-389: Error Conditions, Return Values, Status Codes (p.2212)
- B CWE-209: Generation of Error Message Containing Sensitive Information (p.528)
- B CWE-248: Uncaught Exception (p.587)
- B CWE-252: Unchecked Return Value (p.596)
- B CWE-253: Incorrect Check of Function Return Value (p.603)
- B CWE-390: Detection of Error Condition Without Action (p.925)
- B CWE-391: Unchecked Error Condition (p.930)
- B CWE-392: Missing Report of Error Condition (p.933)
- B CWE-393: Return of Wrong Status Code (p.935)
- B CWE-394: Unexpected Status Code or Return Value (p.937)
- B CWE-395: Use of NullPointerException Catch to Detect NULL Pointer Dereference (p.939)
- B CWE-396: Declaration of Catch for Generic Exception (p.941)
- B CWE-397: Declaration of Throws for Generic Exception (p.943)
- B CWE-544: Missing Standardized Error Handling Mechanism (p.1232)
- B CWE-584: Return Inside Finally Block (p.1292)
- B CWE-617: Reachable Assertion (p.1352)
- B CWE-756: Missing Custom Error Page (p.1532)
- C CWE-569: Expression Issues (p.2221)
- B CWE-480: Use of Incorrect Operator (p.1127)

- B CWE-570: Expression is Always False (p.1266)
- B CWE-571: Expression is Always True (p.1269)
- B CWE-783: Operator Precedence Logic Error (p.1602)
- C CWE-429: Handler Errors (p.2216)
  - B CWE-430: Deployment of Wrong Handler (p.1022)
  - B CWE-431: Missing Handler (p.1023)
  - B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1028)
- C CWE-199: Information Management Errors (p.2199)
  - B CWE-201: Insertion of Sensitive Information Into Sent Data (p.510)
  - B CWE-204: Observable Response Discrepancy (p.519)
  - B CWE-205: Observable Behavioral Discrepancy (p.522)
  - B CWE-208: Observable Timing Discrepancy (p.526)
  - B CWE-209: Generation of Error Message Containing Sensitive Information (p.528)
  - B CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.538)
  - B CWE-213: Exposure of Sensitive Information Due to Incompatible Policies (p.541)
  - B CWE-214: Invocation of Process Using Visible Sensitive Information (p.543)
  - B CWE-215: Insertion of Sensitive Information Into Debugging Code (p.545)
  - B CWE-312: Cleartext Storage of Sensitive Information (p.751)
  - B CWE-319: Cleartext Transmission of Sensitive Information (p.766)
  - B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.865)
  - B CWE-497: Exposure of Sensitive System Information to an Unauthorized Control Sphere (p.1170)
  - B CWE-524: Use of Cache Containing Sensitive Information (p.1208)
  - B CWE-538: Insertion of Sensitive Information into Externally-Accessible File or Directory (p.1224)
  - B CWE-921: Storage of Sensitive Data in a Mechanism without Access Control (p.1772)
  - B CWE-1230: Exposure of Sensitive Information Through Metadata (p.1940)
- C CWE-452: Initialization and Cleanup Errors (p.2218)
  - B CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.538)
  - B CWE-454: External Initialization of Trusted Variables or Data Stores (p.1063)
  - B CWE-455: Non-exit on Failed Initialization (p.1065)
  - B CWE-459: Incomplete Cleanup (p.1076)
  - B CWE-1051: Initialization with Hard-Coded Network Resource Configuration Data (p.1830)
  - B CWE-1052: Excessive Use of Hard-Coded Literals in Initialization (p.1831)
  - B CWE-1188: Insecure Default Initialization of Resource (p.1913)
- C CWE-1215: Data Validation Issues (p.2408)
  - B CWE-112: Missing XML Validation (p.268)
  - B CWE-179: Incorrect Behavior Order: Early Validation (p.445)
  - B CWE-183: Permissive List of Allowed Inputs (p.454)
  - B CWE-184: Incomplete List of Disallowed Inputs (p.456)
  - B CWE-606: Unchecked Input for Loop Condition (p.1332)
  - B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1385)
  - B CWE-1173: Improper Use of Validation Framework (p.1908)
  - B CWE-1284: Improper Validation of Specified Quantity in Input (p.2054)
  - B CWE-1285: Improper Validation of Specified Index, Position, or Offset in Input (p.2056)
  - B CWE-1286: Improper Validation of Syntactic Correctness of Input (p.2060)
  - B CWE-1287: Improper Validation of Specified Type of Input (p.2062)
  - B CWE-1288: Improper Validation of Consistency within Input (p.2063)
  - B CWE-1289: Improper Validation of Unsafe Equivalence in Input (p.2065)
- C CWE-1216: Lockout Mechanism Errors (p.2409)
  - B CWE-645: Overly Restrictive Account Lockout Mechanism (p.1397)
- C CWE-1218: Memory Buffer Errors (p.2410)
  - B CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.303)
  - B CWE-124: Buffer Underwrite ('Buffer Underflow') (p.324)
  - B CWE-125: Out-of-bounds Read (p.327)
  - B CWE-131: Incorrect Calculation of Buffer Size (p.352)

- B CWE-786: Access of Memory Location Before Start of Buffer (p.1610)
- B CWE-787: Out-of-bounds Write (p.1613)
- B CWE-788: Access of Memory Location After End of Buffer (p.1621)
- B CWE-805: Buffer Access with Incorrect Length Value (p.1654)
- B CWE-1284: Improper Validation of Specified Quantity in Input (p.2054)
- C CWE-189: Numeric Errors (p.2199)
  - B CWE-128: Wrap-around Error (p.336)
  - B CWE-190: Integer Overflow or Wraparound (p.468)
  - B CWE-191: Integer Underflow (Wrap or Wraparound) (p.476)
  - B CWE-193: Off-by-one Error (p.482)
  - B CWE-369: Divide By Zero (p.896)
  - B CWE-681: Incorrect Conversion between Numeric Types (p.1458)
  - B CWE-839: Numeric Range Comparison Without Minimum Check (p.1717)
  - B CWE-1335: Incorrect Bitwise Shift of Integer (p.2151)
  - B CWE-1339: Insufficient Precision or Accuracy of a Real Number (p.2157)
  - B CWE-1389: Incorrect Parsing of Numbers with Different Radices (p.2178)
- C CWE-275: Permission Issues (p.2206)
  - B CWE-276: Incorrect Default Permissions (p.654)
  - V CWE-277: Insecure Inherited Permissions (p.657)
  - V CWE-278: Insecure Preserved Inherited Permissions (p.659)
  - V CWE-279: Incorrect Execution-Assigned Permissions (p.660)
  - B CWE-280: Improper Handling of Insufficient Permissions or Privileges (p.662)
  - B CWE-281: Improper Preservation of Permissions (p.664)
  - V CWE-618: Exposed Unsafe ActiveX Method (p.1354)
  - B CWE-766: Critical Data Element Declared Public (p.1559)
  - B CWE-767: Access to Critical Private Variable via Public Method (p.1562)
- C CWE-465: Pointer Issues (p.2218)
  - B CWE-466: Return of Pointer Value Outside of Expected Range (p.1087)
  - B CWE-468: Incorrect Pointer Scaling (p.1092)
  - B CWE-469: Use of Pointer Subtraction to Determine Size (p.1093)
  - B CWE-476: NULL Pointer Dereference (p.1110)
  - V CWE-587: Assignment of a Fixed Address to a Pointer (p.1296)
  - B CWE-763: Release of Invalid Pointer or Reference (p.1552)
  - B CWE-822: Untrusted Pointer Dereference (p.1674)
  - B CWE-823: Use of Out-of-range Pointer Offset (p.1677)
  - B CWE-824: Access of Uninitialized Pointer (p.1680)
  - B CWE-825: Expired Pointer Dereference (p.1682)
- C CWE-265: Privilege Issues (p.2205)
  - V CWE-243: Creation of chroot Jail Without Changing Working Directory (p.579)
  - B CWE-250: Execution with Unnecessary Privileges (p.589)
  - B CWE-266: Incorrect Privilege Assignment (p.628)
  - B CWE-267: Privilege Defined With Unsafe Actions (p.631)
  - B CWE-268: Privilege Chaining (p.634)
  - B CWE-270: Privilege Context Switching Error (p.641)
  - B CWE-272: Least Privilege Violation (p.646)
  - B CWE-273: Improper Check for Dropped Privileges (p.650)
  - B CWE-274: Improper Handling of Insufficient Privileges (p.652)
  - B CWE-280: Improper Handling of Insufficient Permissions or Privileges (p.662)
  - B CWE-501: Trust Boundary Violation (p.1179)
  - V CWE-580: clone() Method Without super.clone() (p.1285)
  - B CWE-648: Incorrect Use of Privileged APIs (p.1401)
- C CWE-1213: Random Number Issues (p.2406)
  - B CWE-331: Insufficient Entropy (p.806)
  - B CWE-334: Small Space of Random Values (p.812)

- B CWE-335: Incorrect Usage of Seeds in Pseudo-Random Number Generator (PRNG) (p.814)
- B CWE-338: Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG) (p.821)
- B CWE-341: Predictable from Observable State (p.827)
- B CWE-342: Predictable Exact Value from Previous Values (p.829)
- B CWE-343: Predictable Value Range from Previous Values (p.831)
- B CWE-344: Use of Invariant Value in Dynamically Changing Context (p.832)
- B CWE-1241: Use of Predictable Algorithm in Random Number Generator (p.1961)
- C CWE-411: Resource Locking Problems (p.2215)
  - B CWE-412: Unrestricted Externally Accessible Lock (p.982)
  - B CWE-413: Improper Resource Locking (p.984)
  - B CWE-414: Missing Lock Check (p.988)
  - B CWE-609: Double-Checked Locking (p.1337)
  - B CWE-764: Multiple Locks of a Critical Resource (p.1556)
  - B CWE-765: Multiple Unlocks of a Critical Resource (p.1558)
  - B CWE-832: Unlock of a Resource that is not Locked (p.1702)
  - B CWE-833: Deadlock (p.1704)
- C CWE-399: Resource Management Errors (p.2214)
  - B CWE-73: External Control of File Name or Path (p.132)
  - B CWE-403: Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak') (p.959)
  - B CWE-410: Insufficient Resource Pool (p.980)
  - B CWE-470: Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection') (p.1096)
  - B CWE-502: Deserialization of Untrusted Data (p.1181)
  - B CWE-619: Dangling Database Cursor ('Cursor Injection') (p.1356)
  - B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1385)
  - B CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1483)
  - B CWE-763: Release of Invalid Pointer or Reference (p.1552)
  - B CWE-770: Allocation of Resources Without Limits or Throttling (p.1566)
  - B CWE-771: Missing Reference to Active Allocated Resource (p.1574)
  - B CWE-772: Missing Release of Resource after Effective Lifetime (p.1576)
  - B CWE-826: Premature Release of Resource During Expected Lifetime (p.1685)
  - B CWE-908: Use of Uninitialized Resource (p.1742)
  - B CWE-909: Missing Initialization of Resource (p.1746)
  - B CWE-910: Use of Expired File Descriptor (p.1749)
  - B CWE-911: Improper Update of Reference Count (p.1751)
  - B CWE-914: Improper Control of Dynamically-Identified Variables (p.1755)
  - B CWE-915: Improperly Controlled Modification of Dynamically-Determined Object Attributes (p.1757)
  - B CWE-920: Improper Restriction of Power Consumption (p.1770)
  - B CWE-1188: Insecure Default Initialization of Resource (p.1913)
  - B CWE-1341: Multiple Releases of Same Resource or Handle (p.2161)
- C CWE-387: Signal Errors (p.2210)
  - B CWE-364: Signal Handler Race Condition (p.881)
- C CWE-371: State Issues (p.2210)
  - B CWE-15: External Control of System or Configuration Setting (p.17)
  - B CWE-372: Incomplete Internal State Distinction (p.901)
  - B CWE-374: Passing Mutable Objects to an Untrusted Method (p.903)
  - B CWE-375: Returning a Mutable Object to an Untrusted Caller (p.906)
  - B CWE-1265: Unintended Reentrant Invocation of Non-reentrant Code Via Nested Calls (p.2014)
- C CWE-133: String Errors (p.2197)
  - B CWE-134: Use of Externally-Controlled Format String (p.362)
  - B CWE-135: Incorrect Calculation of Multi-Byte String Length (p.368)
  - B CWE-480: Use of Incorrect Operator (p.1127)
- C CWE-136: Type Errors (p.2197)
  - B CWE-681: Incorrect Conversion between Numeric Types (p.1458)
  - B CWE-843: Access of Resource Using Incompatible Type ('Type Confusion') (p.1726)

- B CWE-1287: Improper Validation of Specified Type of Input (p.2062)
- C CWE-355: User Interface Security Issues (p.2208)
- B CWE-356: Product UI does not Warn User of Unsafe Actions (p.861)
- B CWE-357: Insufficient UI Warning of Dangerous Operations (p.863)
- B CWE-447: Unimplemented or Unsupported Feature in UI (p.1053)
- B CWE-448: Obsolete Feature in UI (p.1054)
- B CWE-449: The UI Performs the Wrong Action (p.1055)
- B CWE-549: Missing Password Field Masking (p.1237)
- B CWE-1007: Insufficient Visual Distinction of Homoglyphs Presented to User (p.1800)
- B CWE-1021: Improper Restriction of Rendered UI Layers or Frames (p.1804)
- C CWE-1217: User Session Errors (p.2409)
- B CWE-488: Exposure of Data Element to Wrong Session (p.1145)
- B CWE-613: Insufficient Session Expiration (p.1345)
- B CWE-841: Improper Enforcement of Behavioral Workflow (p.1721)

## Graph View: CWE-700: Seven Pernicious Kingdoms

- C** CWE-254: 7PK - Security Features (*p.2202*)
  - B** CWE-256: Plaintext Storage of a Password (*p.605*)
  - V** CWE-258: Empty Password in Configuration File (*p.611*)
  - V** CWE-259: Use of Hard-coded Password (*p.613*)
  - B** CWE-260: Password in Configuration File (*p.618*)
  - B** CWE-261: Weak Encoding for Password (*p.621*)
  - B** CWE-272: Least Privilege Violation (*p.646*)
  - |P|** CWE-284: Improper Access Control (*p.668*)

- V CWE-591: Sensitive Data Storage in Improperly Locked Memory (p.1304)
- V CWE-598: Use of GET Request Method With Sensitive Query Strings (p.1315)
- V CWE-607: Public Static Final Field References Mutable Object (p.1334)
- B CWE-612: Improper Authorization of Index Containing Sensitive Information (p.1344)
- V CWE-615: Inclusion of Sensitive Information in Source Code Comments (p.1348)
- G CWE-642: External Control of Critical State Data (p.1387)
- G CWE-668: Exposure of Resource to Wrong Sphere (p.1438)
- G CWE-669: Incorrect Resource Transfer Between Spheres (p.1441)
- V CWE-7: J2EE Misconfiguration: Missing Custom Error Page (p.4)
- B CWE-756: Missing Custom Error Page (p.1532)
- B CWE-767: Access to Critical Private Variable via Public Method (p.1562)
- V CWE-8: J2EE Misconfiguration: Entity Bean Declared Remote (p.6)
- C CWE-964: SFP Secondary Cluster: Exposure Temporary File (p.2314)
- G CWE-377: Insecure Temporary File (p.908)
- B CWE-378: Creation of Temporary File With Insecure Permissions (p.911)
- B CWE-379: Creation of Temporary File in Directory with Insecure Permissions (p.913)
- C CWE-965: SFP Secondary Cluster: Insecure Session Management (p.2315)
- B CWE-488: Exposure of Data Element to Wrong Session (p.1145)
- B CWE-524: Use of Cache Containing Sensitive Information (p.1208)
- V CWE-6: J2EE Misconfiguration: Insufficient Session-ID Length (p.2)
- C CWE-966: SFP Secondary Cluster: Other Exposures (p.2315)
- V CWE-453: Insecure Default Variable Initialization (p.1061)
- B CWE-487: Reliance on Package-level Scope (p.1144)
- V CWE-492: Use of Inner Class Containing Sensitive Data (p.1152)
- V CWE-525: Use of Web Browser Cache Containing Sensitive Information (p.1209)
- V CWE-614: Sensitive Cookie in HTTPS Session Without 'Secure' Attribute (p.1347)
- V CWE-651: Exposure of WSDL File Containing Sensitive Information (p.1407)
- C CWE-967: SFP Secondary Cluster: State Disclosure (p.2316)

- B CWE-202: Exposure of Sensitive Information Through Data Queries (p.513)
- B CWE-203: Observable Discrepancy (p.514)
- B CWE-204: Observable Response Discrepancy (p.519)
- B CWE-205: Observable Behavioral Discrepancy (p.522)
- V CWE-206: Observable Internal Behavioral Discrepancy (p.523)
- V CWE-207: Observable Behavioral Discrepancy With Equivalent Products (p.524)
- B CWE-208: Observable Timing Discrepancy (p.526)
- C CWE-896: SFP Primary Cluster: Tainted Input (p.2290)
- C CWE-990: SFP Secondary Cluster: Tainted Input to Command (p.2328)
- V CWE-102: Struts: Duplicate Validation Forms (p.245)
- V CWE-103: Struts: Incomplete validate() Method Definition (p.246)
- V CWE-104: Struts: Form Bean Does Not Extend Validation Class (p.249)
- V CWE-105: Struts: Form Field Without Validator (p.252)
- V CWE-106: Struts: Plug-in Framework not in Use (p.255)
- V CWE-107: Struts: Unused Validation Form (p.257)
- V CWE-108: Struts: Unvalidated Action Form (p.260)
- V CWE-109: Struts: Validator Turned Off (p.261)
- V CWE-110: Struts: Validator Without Form Field (p.263)
- B CWE-112: Missing XML Validation (p.268)
- V CWE-113: Improper Neutralization of CRLF Sequences in HTTP Headers ('HTTP Request/Response Splitting') (p.270)
- B CWE-130: Improper Handling of Length Parameter Inconsistency (p.348)
- B CWE-134: Use of Externally-Controlled Format String (p.362)
- C CWE-138: Improper Neutralization of Special Elements (p.371)
- B CWE-140: Improper Neutralization of Delimiters (p.374)
- V CWE-141: Improper Neutralization of Parameter/Argument Delimiters (p.375)
- V CWE-142: Improper Neutralization of Value Delimiters (p.377)
- V CWE-143: Improper Neutralization of Record Delimiters (p.379)
- V CWE-144: Improper Neutralization of Line Delimiters (p.381)
- V CWE-145: Improper Neutralization of Section Delimiters (p.383)
- V CWE-146: Improper Neutralization of Expression/Command Delimiters (p.384)
- V CWE-147: Improper Neutralization of Input Terminators (p.386)
- V CWE-148: Improper Neutralization of Input Leaders (p.388)
- V CWE-149: Improper Neutralization of Quoting Syntax (p.389)
- V CWE-150: Improper Neutralization of Escape, Meta, or Control Sequences (p.391)
- V CWE-151: Improper Neutralization of Comment Delimiters (p.394)
- V CWE-152: Improper Neutralization of Macro Symbols (p.395)
- V CWE-153: Improper Neutralization of Substitution Characters (p.397)
- V CWE-154: Improper Neutralization of Variable Name Delimiters (p.399)
- V CWE-155: Improper Neutralization of Wildcards or Matching Symbols (p.401)
- V CWE-156: Improper Neutralization of Whitespace (p.402)
- V CWE-157: Failure to Sanitize Paired Delimiters (p.404)
- V CWE-158: Improper Neutralization of Null Byte or NUL Character (p.406)
- C CWE-159: Improper Handling of Invalid Use of Special Elements (p.409)
- V CWE-160: Improper Neutralization of Leading Special Elements (p.411)
- V CWE-161: Improper Neutralization of Multiple Leading Special Elements (p.412)
- V CWE-162: Improper Neutralization of Trailing Special Elements (p.414)
- V CWE-163: Improper Neutralization of Multiple Trailing Special Elements (p.415)
- V CWE-164: Improper Neutralization of Internal Special Elements (p.417)
- V CWE-165: Improper Neutralization of Multiple Internal Special Elements (p.419)
- B CWE-183: Permissive List of Allowed Inputs (p.454)
- B CWE-184: Incomplete List of Disallowed Inputs (p.456)
- C CWE-185: Incorrect Regular Expression (p.459)
- B CWE-186: Overly Restrictive Regular Expression (p.463)

- ⓑ CWE-444: Inconsistent Interpretation of HTTP Requests ('HTTP Request/Response Smuggling') (p.1046)
- Ⓧ CWE-553: Command Shell in Externally Accessible Directory (p.1244)
- Ⓧ CWE-554: ASP.NET Misconfiguration: Not Using Input Validation Framework (p.1244)
- Ⓧ CWE-564: SQL Injection: Hibernate (p.1257)
- ⓑ CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1319)
- ⓑ CWE-611: Improper Restriction of XML External Entity Reference (p.1341)
- ⓑ CWE-619: Dangling Database Cursor ('Cursor Injection') (p.1356)
- Ⓧ CWE-621: Variable Extraction Error (p.1359)
- ⓑ CWE-624: Executable Regular Expression Error (p.1364)
- ⓑ CWE-625: Permissive Regular Expression (p.1365)
- Ⓧ CWE-626: Null Byte Interaction Error (Poison Null Byte) (p.1368)
- Ⓧ CWE-627: Dynamic Variable Evaluation (p.1370)
- ⓑ CWE-641: Improper Restriction of Names for Files and Other Resources (p.1385)
- ⓑ CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1393)
- Ⓧ CWE-644: Improper Neutralization of HTTP Headers for Scripting Syntax (p.1395)
- Ⓧ CWE-646: Reliance on File Name or Extension of Externally-Supplied File (p.1398)
- ⓑ CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1408)
- Ⓧ CWE-687: Function Call With Incorrectly Specified Argument Value (p.1472)
- Ⓧ|ⓑ CWE-707: Improper Neutralization (p.1500)
- Ⓧ|ⓑ CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.136)
- Ⓧ|ⓑ CWE-75: Failure to Sanitize Special Elements into a Different Plane (Special Element Injection) (p.142)
- ⓑ CWE-76: Improper Neutralization of Equivalent Special Elements (p.143)
- Ⓧ|ⓑ CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.144)
- ⓑ CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
- ⓑ CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
- Ⓧ CWE-80: Improper Neutralization of Script-Related HTML Tags in a Web Page (Basic XSS) (p.176)
- Ⓧ CWE-81: Improper Neutralization of Script in an Error Message Web Page (p.179)
- Ⓧ CWE-82: Improper Neutralization of Script in Attributes of IMG Tags in a Web Page (p.181)
- Ⓧ CWE-83: Improper Neutralization of Script in Attributes in a Web Page (p.183)
- Ⓧ CWE-84: Improper Neutralization of Encoded URI Schemes in a Web Page (p.185)
- Ⓧ CWE-85: Doubled Character XSS Manipulations (p.187)
- Ⓧ CWE-86: Improper Neutralization of Invalid Characters in Identifiers in Web Pages (p.189)
- Ⓧ CWE-87: Improper Neutralization of Alternate XSS Syntax (p.191)
- ⓑ CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.193)
- ⓑ CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
- ⓑ CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.212)
- ⓑ CWE-91: XML Injection (aka Blind XPath Injection) (p.214)
- ⓑ CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.217)
- Ⓧ CWE-95: Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection') (p.225)
- ⓑ CWE-96: Improper Neutralization of Directives in Statically Saved Code ('Static Code Injection') (p.231)
- Ⓧ CWE-97: Improper Neutralization of Server-Side Includes (SSI) Within a Web Page (p.234)
- Ⓧ|ⓑ CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.242)
- Ⓧ|ⓑ CWE-991: SFP Secondary Cluster: Tainted Input to Environment (p.2331)
- Ⓧ|ⓑ CWE-114: Process Control (p.275)

- B CWE-427: Uncontrolled Search Path Element (*p.1013*)
- B CWE-470: Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection') (*p.1096*)
- B CWE-471: Modification of Assumed-Immutable Data (MAID) (*p.1099*)
- B CWE-472: External Control of Assumed-Immutable Web Parameter (*p.1101*)
- V CWE-473: PHP External Variable Modification (*p.1105*)
- B CWE-494: Download of Code Without Integrity Check (*p.1161*)
- V CWE-622: Improper Validation of Function Hook Arguments (*p.1361*)
- C CWE-673: External Influence of Sphere Definition (*p.1448*)
- B CWE-94: Improper Control of Generation of Code ('Code Injection') (*p.219*)

    - B CWE-334: Small Space of Random Values (p.812)
    - B CWE-335: Incorrect Usage of Seeds in Pseudo-Random Number Generator (PRNG) (p.814)
    - V CWE-336: Same Seed in Pseudo-Random Number Generator (PRNG) (p.817)
    - V CWE-337: Predictable Seed in Pseudo-Random Number Generator (PRNG) (p.819)
    - B CWE-338: Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG) (p.821)
    - V CWE-339: Small Seed Space in PRNG (p.824)
    - C CWE-340: Generation of Predictable Numbers or Identifiers (p.826)
    - B CWE-341: Predictable from Observable State (p.827)
    - B CWE-342: Predictable Exact Value from Previous Values (p.829)
    - B CWE-343: Predictable Value Range from Previous Values (p.831)
    - B CWE-344: Use of Invariant Value in Dynamically Changing Context (p.832)
- C CWE-906: SFP Primary Cluster: UI (p.2295)
  - C CWE-995: SFP Secondary Cluster: Feature (p.2334)
    - B CWE-447: Unimplemented or Unsupported Feature in UI (p.1053)
    - B CWE-448: Obsolete Feature in UI (p.1054)
    - B CWE-449: The UI Performs the Wrong Action (p.1055)
    - B CWE-450: Multiple Interpretations of UI Input (p.1056)
    - C CWE-451: User Interface (UI) Misrepresentation of Critical Information (p.1057)

- B CWE-549: Missing Password Field Masking (p.1237)
- C CWE-655: Insufficient Psychological Acceptability (p.1415)
- C CWE-996: SFP Secondary Cluster: Security (p.2334)
  - B CWE-356: Product UI does not Warn User of Unsafe Actions (p.861)
  - B CWE-357: Insufficient UI Warning of Dangerous Operations (p.863)
  - C CWE-446: UI Discrepancy for Security Feature (p.1051)
- C CWE-997: SFP Secondary Cluster: Information Loss (p.2335)
  - C CWE-221: Information Loss or Omission (p.550)
  - B CWE-222: Truncation of Security-relevant Information (p.551)
  - B CWE-223: Omission of Security-relevant Information (p.552)
  - B CWE-224: Obscured Security-relevant Information by Alternate Name (p.554)
- C CWE-907: SFP Primary Cluster: Other (p.2296)
- C CWE-975: SFP Secondary Cluster: Architecture (p.2319)
  - B CWE-348: Use of Less Trusted Source (p.842)
  - B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.865)
  - C CWE-602: Client-Side Enforcement of Server-Side Security (p.1325)
  - C CWE-637: Unnecessary Complexity in Protection Mechanism (Not Using 'Economy of Mechanism') (p.1376)
  - B CWE-649: Reliance on Obfuscation or Encryption of Security-Relevant Inputs without Integrity Checking (p.1403)
  - B CWE-654: Reliance on a Single Factor in a Security Decision (p.1412)
  - C CWE-656: Reliance on Security Through Obscurity (p.1417)
  - C CWE-657: Violation of Secure Design Principles (p.1419)
  - C CWE-671: Lack of Administrator Control over Security (p.1444)
  - P CWE-693: Protection Mechanism Failure (p.1481)
  - B CWE-749: Exposed Dangerous Method or Function (p.1518)
- C CWE-976: SFP Secondary Cluster: Compiler (p.2320)
  - B CWE-733: Compiler Optimization Removal or Modification of Security-critical Code (p.1516)
- C CWE-977: SFP Secondary Cluster: Design (p.2320)
  - B CWE-115: Misinterpretation of Input (p.279)
  - V CWE-187: Partial String Comparison (p.464)
  - B CWE-188: Reliance on Data/Memory Layout (p.466)
  - B CWE-193: Off-by-one Error (p.482)
  - B CWE-349: Acceptance of Extraneous Untrusted Data With Trusted Data (p.844)
  - C CWE-405: Asymmetric Resource Consumption (Amplification) (p.967)
  - C CWE-406: Insufficient Control of Network Message Volume (Network Amplification) (p.972)
  - C CWE-407: Inefficient Algorithmic Complexity (p.974)
  - B CWE-408: Incorrect Behavior Order: Early Amplification (p.976)
  - B CWE-409: Improper Handling of Highly Compressed Data (Data Amplification) (p.978)
  - B CWE-410: Insufficient Resource Pool (p.980)
  - B CWE-430: Deployment of Wrong Handler (p.1022)
  - V CWE-462: Duplicate Key in Associative List (Alist) (p.1082)
  - B CWE-463: Deletion of Data Structure Sentinel (p.1083)
  - B CWE-464: Addition of Data Structure Sentinel (p.1085)
  - B CWE-483: Incorrect Block Delimitation (p.1136)
  - B CWE-581: Object Model Violation: Just One of Equals and Hashcode Defined (p.1287)
  - V CWE-595: Comparison of Object References Instead of Object Contents (p.1309)
  - V CWE-618: Exposed Unsafe ActiveX Method (p.1354)
  - B CWE-648: Incorrect Use of Privileged APIs (p.1401)
  - C CWE-670: Always-Incorrect Control Flow Implementation (p.1442)
  - P CWE-682: Incorrect Calculation (p.1462)
  - P CWE-691: Insufficient Control Flow Management (p.1479)
  - C CWE-696: Incorrect Behavior Order (p.1486)
  - P CWE-697: Incorrect Comparison (p.1487)
  - B CWE-698: Execution After Redirect (EAR) (p.1491)

- G CWE-705: Incorrect Control Flow Scoping (*p.1497*)
- C CWE-978: SFP Secondary Cluster: Implementation (*p.2322*)
- B CWE-358: Improperly Implemented Security Check for Standard (*p.864*)
- C CWE-398: 7PK - Code Quality (*p.2213*)
- V CWE-623: Unsafe ActiveX Control Marked Safe For Scripting (*p.1362*)
- P CWE-710: Improper Adherence to Coding Standards (*p.1504*)
- C CWE-1237: SFP Primary Cluster: Faulty Resource Release (*p.2414*)
- V CWE-415: Double Free (*p.989*)
- V CWE-762: Mismatched Memory Management Routines (*p.1548*)
- B CWE-763: Release of Invalid Pointer or Reference (*p.1552*)
- C CWE-1238: SFP Primary Cluster: Failure to Release Memory (*p.2414*)
- V CWE-401: Missing Release of Memory after Effective Lifetime (*p.955*)

## Graph View: CWE-900: Weaknesses in the 2011 CWE/SANS Top 25 Most Dangerous Software Errors

- C** CWE-867: 2011 Top 25 - Weaknesses On the Cusp (p.2274)
  - V** CWE-129: Improper Validation of Array Index (p.339)
  - B** CWE-209: Generation of Error Message Containing Sensitive Information (p.528)
  - B** CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.538)
  - C** CWE-330: Use of Insufficiently Random Values (p.799)
  - C** CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition') (p.871)
  - V** CWE-456: Missing Initialization of a Variable (p.1067)
  - B** CWE-476: NULL Pointer Dereference (p.1110)
  - B** CWE-681: Incorrect Conversion between Numeric Types (p.1458)
  - C** CWE-754: Improper Check for Unusual or Exceptional Conditions (p.1522)
  - B** CWE-770: Allocation of Resources Without Limits or Throttling (p.1566)
  - B** CWE-772: Missing Release of Resource after Effective Lifetime (p.1576)
  - B** CWE-805: Buffer Access with Incorrect Length Value (p.1654)
  - B** CWE-822: Untrusted Pointer Dereference (p.1674)
  - B** CWE-825: Expired Pointer Dereference (p.1682)
  - B** CWE-838: Inappropriate Encoding for Output Context (p.1713)
  - B** CWE-841: Improper Enforcement of Behavioral Workflow (p.1721)
- C** CWE-866: 2011 Top 25 - Porous Defenses (p.2273)
  - B** CWE-250: Execution with Unnecessary Privileges (p.589)
  - B** CWE-306: Missing Authentication for Critical Function (p.729)
  - B** CWE-307: Improper Restriction of Excessive Authentication Attempts (p.735)
  - C** CWE-311: Missing Encryption of Sensitive Data (p.744)
  - C** CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.785)
  - C** CWE-732: Incorrect Permission Assignment for Critical Resource (p.1506)
  - V** CWE-759: Use of a One-Way Hash without a Salt (p.1537)
  - B** CWE-798: Use of Hard-coded Credentials (p.1642)
  - B** CWE-807: Reliance on Untrusted Inputs in a Security Decision (p.1665)
  - C** CWE-862: Missing Authorization (p.1730)
  - C** CWE-863: Incorrect Authorization (p.1736)
- C** CWE-865: 2011 Top 25 - Risky Resource Management (p.2273)
  - B** CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.303)
  - B** CWE-131: Incorrect Calculation of Buffer Size (p.352)
  - B** CWE-134: Use of Externally-Controlled Format String (p.362)
  - B** CWE-190: Integer Overflow or Wraparound (p.468)
  - B** CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - B** CWE-494: Download of Code Without Integrity Check (p.1161)
  - B** CWE-676: Use of Potentially Dangerous Function (p.1453)
- C** CWE-864: 2011 Top 25 - Insecure Interaction Between Components (p.2272)
  - A** CWE-352: Cross-Site Request Forgery (CSRF) (p.851)
  - B** CWE-434: Unrestricted Upload of File with Dangerous Type (p.1028)
  - B** CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1319)
  - B** CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
  - B** CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
  - B** CWE-829: Inclusion of Functionality from Untrusted Control Sphere (p.1692)
  - B** CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)

## Graph View: CWE-928: Weaknesses in OWASP Top Ten (2013)

- C** CWE-929: OWASP Top Ten 2013 Category A1 - Injection (p.2296)
  - G** CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.136)
  - G** CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.144)
  - B** CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
  - B** CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.193)
  - B** CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
  - V** CWE-564: SQL Injection: Hibernate (p.1257)
  - B** CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.212)
  - B** CWE-91: XML Injection (aka Blind XPath Injection) (p.214)
  - B** CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1393)
  - B** CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1408)
- C** CWE-930: OWASP Top Ten 2013 Category A2 - Broken Authentication and Session Management (p.2297)
  - B** CWE-256: Plaintext Storage of a Password (p.605)
  - G** CWE-287: Improper Authentication (p.681)
  - G** CWE-311: Missing Encryption of Sensitive Data (p.744)
  - B** CWE-384: Session Fixation (p.919)
  - G** CWE-522: Insufficiently Protected Credentials (p.1201)
  - B** CWE-523: Unprotected Transport of Credentials (p.1206)
  - B** CWE-613: Insufficient Session Expiration (p.1345)
  - B** CWE-620: Unverified Password Change (p.1357)
  - B** CWE-640: Weak Password Recovery Mechanism for Forgotten Password (p.1383)
- C** CWE-931: OWASP Top Ten 2013 Category A3 - Cross-Site Scripting (XSS) (p.2298)
  - B** CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
- C** CWE-932: OWASP Top Ten 2013 Category A4 - Insecure Direct Object References (p.2298)
  - B** CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - G** CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.242)
  - B** CWE-639: Authorization Bypass Through User-Controlled Key (p.1380)
  - G** CWE-706: Use of Incorrectly-Resolved Name or Reference (p.1499)
- C** CWE-933: OWASP Top Ten 2013 Category A5 - Security Misconfiguration (p.2299)
  - C** CWE-2: 7PK - Environment (p.2194)
  - C** CWE-16: Configuration (p.2195)
  - B** CWE-209: Generation of Error Message Containing Sensitive Information (p.528)
  - B** CWE-215: Insertion of Sensitive Information Into Debugging Code (p.545)
  - V** CWE-548: Exposure of Information Through Directory Listing (p.1236)
- C** CWE-934: OWASP Top Ten 2013 Category A6 - Sensitive Data Exposure (p.2299)
  - G** CWE-311: Missing Encryption of Sensitive Data (p.744)
  - B** CWE-312: Cleartext Storage of Sensitive Information (p.751)
  - B** CWE-319: Cleartext Transmission of Sensitive Information (p.766)
  - C** CWE-320: Key Management Errors (p.2208)
  - B** CWE-325: Missing Cryptographic Step (p.781)
  - G** CWE-326: Inadequate Encryption Strength (p.783)
  - G** CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.785)
  - B** CWE-328: Use of Weak Hash (p.792)
- C** CWE-935: OWASP Top Ten 2013 Category A7 - Missing Function Level Access Control (p.2300)
  - G** CWE-285: Improper Authorization (p.673)
- C** CWE-936: OWASP Top Ten 2013 Category A8 - Cross-Site Request Forgery (CSRF) (p.2300)
  - B** CWE-352: Cross-Site Request Forgery (CSRF) (p.851)
- C** CWE-937: OWASP Top Ten 2013 Category A9 - Using Components with Known Vulnerabilities (p.2301)

- C** CWE-938: OWASP Top Ten 2013 Category A10 - Unvalidated Redirects and Forwards (p.2301)
- B** CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1319)

## Graph View: CWE-1000: Research Concepts

- [P] CWE-284: Improper Access Control (p.668)
  - B CWE-1191: On-Chip Debug and Test Interface With Improper Access Control (p.1917)
  - B CWE-1220: Insufficient Granularity of Access Control (p.1928)
    - V CWE-1222: Insufficient Granularity of Address Regions Protected by Register Locks (p.1933)
  - B CWE-1224: Improper Restriction of Write-Once Bit Fields (p.1937)
  - B CWE-1231: Improper Prevention of Lock Bit Modification (p.1941)
  - B CWE-1233: Security-Sensitive Hardware Controls with Missing Lock Bit Protection (p.1945)
  - B CWE-1242: Inclusion of Undocumented Features or Chicken Bits (p.1962)
  - B CWE-1252: CPU Hardware Not Configured to Support Exclusivity of Write and Execute Operations (p.1984)
  - B CWE-1257: Improper Access Control Applied to Mirrored or Aliased Memory Regions (p.1996)
  - B CWE-1259: Improper Restriction of Security Token Assignment (p.2000)
  - B CWE-1260: Improper Handling of Overlap Between Protected Memory Ranges (p.2003)
  - B CWE-1262: Improper Access Control for Register Interface (p.2008)
  - C CWE-1263: Improper Physical Access Control (p.2011)
    - B CWE-1243: Sensitive Non-Volatile Information Not Protected During Debug (p.1964)
  - B CWE-1267: Policy Uses Obsolete Encoding (p.2019)
  - B CWE-1268: Policy Privileges are not Assigned Consistently Between Control and Data Agents (p.2021)
  - B CWE-1270: Generation of Incorrect Security Tokens (p.2026)
  - B CWE-1274: Improper Access Control for Volatile Memory Containing Boot Code (p.2034)
  - B CWE-1276: Hardware Child Block Incorrectly Connected to Parent System (p.2039)
  - B CWE-1280: Access Control Check Implemented After Asset is Accessed (p.2047)
  - B CWE-1283: Mutable Attestation or Measurement Reporting Data (p.2052)
  - B CWE-1290: Incorrect Decoding of Security Identifiers (p.2066)
  - B CWE-1292: Incorrect Conversion of Security Identifiers (p.2071)
  - C CWE-1294: Insecure Security Identifier Mechanism (p.2074)
    - B CWE-1302: Missing Security Identifier (p.2093)
  - B CWE-1296: Incorrect Chaining or Granularity of Debug Components (p.2077)
  - B CWE-1304: Improperly Preserved Integrity of Hardware Configuration State During a Power Save/Restore Operation (p.2096)
  - B CWE-1311: Improper Translation of Security Attributes by Fabric Bridge (p.2101)
  - B CWE-1312: Missing Protection for Mirrored Regions in On-Chip Fabric Firewall (p.2103)
  - B CWE-1313: Hardware Allows Activation of Test or Debug Logic at Runtime (p.2105)
  - B CWE-1315: Improper Setting of Bus Controlling Capability in Fabric End-point (p.2109)
  - B CWE-1316: Fabric-Address Map Allows Programming of Unwarranted Overlaps of Protected and Unprotected Ranges (p.2111)
  - B CWE-1317: Improper Access Control in Fabric Bridge (p.2113)
  - B CWE-1320: Improper Protection for Outbound Error Messages and Alert Signals (p.2120)
  - B CWE-1323: Improper Management of Sensitive Trace Data (p.2126)
  - B CWE-1334: Unauthorized Error Injection Can Degrade Hardware Redundancy (p.2149)
  - C CWE-269: Improper Privilege Management (p.636)
    - B CWE-250: Execution with Unnecessary Privileges (p.589)
    - B CWE-266: Incorrect Privilege Assignment (p.628)
      - V CWE-1022: Use of Web Link to Untrusted Target with window.opener Access (p.1806)
      - V CWE-520: .NET Misconfiguration: Use of Impersonation (p.1198)
      - V CWE-556: ASP.NET Misconfiguration: Use of Identity Impersonation (p.1246)
      - V CWE-9: J2EE Misconfiguration: Weak Access Permissions for EJB Methods (p.8)
    - B CWE-267: Privilege Defined With Unsafe Actions (p.631)
      - V CWE-623: Unsafe ActiveX Control Marked Safe For Scripting (p.1362)
    - B CWE-268: Privilege Chaining (p.634)
    - B CWE-270: Privilege Context Switching Error (p.641)
    - C CWE-271: Privilege Dropping / Lowering Errors (p.643)
      - B CWE-272: Least Privilege Violation (p.646)

- B CWE-273: Improper Check for Dropped Privileges (p.650)
- B CWE-274: Improper Handling of Insufficient Privileges (p.652)
- B CWE-648: Incorrect Use of Privileged APIs (p.1401)
- C CWE-282: Improper Ownership Management (p.665)
  - B CWE-283: Unverified Ownership (p.667)
  - B CWE-708: Incorrect Ownership Assignment (p.1502)
- C CWE-285: Improper Authorization (p.673)
  - B CWE-1230: Exposure of Sensitive Information Through Metadata (p.1940)
    - B CWE-202: Exposure of Sensitive Information Through Data Queries (p.513)
    - B CWE-612: Improper Authorization of Index Containing Sensitive Information (p.1344)
  - B CWE-1256: Improper Restriction of Software Interfaces to Hardware Features (p.1993)
  - B CWE-1297: Unprotected Confidential Information on Device is Accessible by OSAT Vendors (p.2080)
  - B CWE-1328: Security Version Number Mutable to Older Versions (p.2133)
  - B CWE-552: Files or Directories Accessible to External Parties (p.1240)
    - V CWE-219: Storage of File with Sensitive Data Under Web Root (p.547)
      - V CWE-433: Unparsed Raw Web Content Delivery (p.1026)
    - V CWE-220: Storage of File With Sensitive Data Under FTP Root (p.549)
    - V CWE-527: Exposure of Version-Control Repository to an Unauthorized Control Sphere (p.1212)
    - V CWE-528: Exposure of Core Dump File to an Unauthorized Control Sphere (p.1213)
    - V CWE-529: Exposure of Access Control List Files to an Unauthorized Control Sphere (p.1214)
    - V CWE-530: Exposure of Backup File to an Unauthorized Control Sphere (p.1215)
    - V CWE-539: Use of Persistent Cookies Containing Sensitive Information (p.1226)
    - V CWE-553: Command Shell in Externally Accessible Directory (p.1244)
  - C CWE-732: Incorrect Permission Assignment for Critical Resource (p.1506)
    - V CWE-1004: Sensitive Cookie Without 'HttpOnly' Flag (p.1798)
    - B CWE-276: Incorrect Default Permissions (p.654)
    - V CWE-277: Insecure Inherited Permissions (p.657)
    - V CWE-278: Insecure Preserved Inherited Permissions (p.659)
    - V CWE-279: Incorrect Execution-Assigned Permissions (p.660)
    - B CWE-281: Improper Preservation of Permissions (p.664)
  - C CWE-862: Missing Authorization (p.1730)
    - B CWE-1314: Missing Write Protection for Parametric Data Values (p.2106)
    - B CWE-425: Direct Request ('Forced Browsing') (p.1005)
      - C CWE-638: Not Using Complete Mediation (p.1378)
        - C CWE-424: Improper Protection of Alternate Path (p.1004)
          - B CWE-425: Direct Request ('Forced Browsing') (p.1005)
      - B CWE-939: Improper Authorization in Handler for Custom URL Scheme (p.1785)
    - C CWE-863: Incorrect Authorization (p.1736)
      - B CWE-1244: Internal Asset Exposed to Unsafe Debug Access Level or State (p.1966)
      - B CWE-551: Incorrect Behavior Order: Authorization Before Parsing and Canonicalization (p.1239)
      - B CWE-639: Authorization Bypass Through User-Controlled Key (p.1380)
        - V CWE-566: Authorization Bypass Through User-Controlled SQL Primary Key (p.1261)
      - V CWE-647: Use of Non-Canonical URL Paths for Authorization Decisions (p.1399)
      - B CWE-804: Guessable CAPTCHA (p.1652)
      - V CWE-926: Improper Export of Android Application Components (p.1779)
      - V CWE-927: Use of Implicit Intent for Sensitive Communication (p.1782)
    - C CWE-286: Incorrect User Management (p.680)
      - B CWE-842: Placement of User into Incorrect Group (p.1725)
    - C CWE-287: Improper Authentication (p.681)
      - C CWE-1390: Weak Authentication (p.2181)
        - C CWE-1391: Use of Weak Credentials (p.2183)
        - B CWE-1392: Use of Default Credentials (p.2186)

- B CWE-1393: Use of Default Password (p.2187)
- B CWE-1394: Use of Default Cryptographic Key (p.2189)
- B CWE-521: Weak Password Requirements (p.1199)
- V CWE-258: Empty Password in Configuration File (p.611)
- B CWE-798: Use of Hard-coded Credentials (p.1642)
- V CWE-259: Use of Hard-coded Password (p.613)
- V CWE-321: Use of Hard-coded Cryptographic Key (p.772)
- B CWE-262: Not Using Password Aging (p.623)
- B CWE-263: Password Aging with Long Expiration (p.625)
- B CWE-289: Authentication Bypass by Alternate Name (p.690)
- B CWE-290: Authentication Bypass by Spoofing (p.692)
- V CWE-291: Reliance on IP Address for Authentication (p.695)
- V CWE-293: Using Referer Field for Authentication (p.697)
- V CWE-350: Reliance on Reverse DNS Resolution for a Security-Critical Action (p.846)
- B CWE-294: Authentication Bypass by Capture-replay (p.699)
- B CWE-301: Reflection Attack in an Authentication Protocol (p.720)
- B CWE-302: Authentication Bypass by Assumed-Immutable Data (p.723)
- B CWE-303: Incorrect Implementation of Authentication Algorithm (p.725)
- B CWE-304: Missing Critical Step in Authentication (p.726)
- B CWE-305: Authentication Bypass by Primary Weakness (p.727)
- B CWE-307: Improper Restriction of Excessive Authentication Attempts (p.735)
- B CWE-308: Use of Single-factor Authentication (p.739)
- B CWE-309: Use of Password System for Primary Authentication (p.741)
- G CWE-522: Insufficiently Protected Credentials (p.1201)
- B CWE-256: Plaintext Storage of a Password (p.605)
- B CWE-257: Storing Passwords in a Recoverable Format (p.608)
- B CWE-260: Password in Configuration File (p.618)
- V CWE-13: ASP.NET Misconfiguration: Password in Configuration File (p.13)
- V CWE-258: Empty Password in Configuration File (p.611)
- V CWE-555: J2EE Misconfiguration: Plaintext Password in Configuration File (p.1245)
- B CWE-261: Weak Encoding for Password (p.621)
- B CWE-523: Unprotected Transport of Credentials (p.1206)
- B CWE-549: Missing Password Field Masking (p.1237)
- V CWE-593: Authentication Bypass: OpenSSL CTX Object Modified after SSL Objects are Created (p.1305)
- B CWE-603: Use of Client-Side Authentication (p.1329)
- B CWE-620: Unverified Password Change (p.1357)
- B CWE-640: Weak Password Recovery Mechanism for Forgotten Password (p.1383)
- B CWE-804: Guessable CAPTCHA (p.1652)
- B CWE-836: Use of Password Hash Instead of Password for Authentication (p.1711)
- B CWE-295: Improper Certificate Validation (p.701)
- B CWE-296: Improper Following of a Certificate's Chain of Trust (p.706)
- V CWE-297: Improper Validation of Certificate with Host Mismatch (p.709)
- V CWE-298: Improper Validation of Certificate Expiration (p.713)
- B CWE-299: Improper Check for Certificate Revocation (p.715)
- V CWE-370: Missing Check for Certificate Revocation after Initial Check (p.900)
- V CWE-599: Missing Validation of OpenSSL Certificate (p.1316)
- B CWE-306: Missing Authentication for Critical Function (p.729)
- B CWE-288: Authentication Bypass Using an Alternate Path or Channel (p.688)
- B CWE-1299: Missing Protection Mechanism for Alternate Hardware Interface (p.2084)
- B CWE-425: Direct Request ('Forced Browsing') (p.1005)
- B CWE-322: Key Exchange without Entity Authentication (p.776)
- B CWE-645: Overly Restrictive Account Lockout Mechanism (p.1397)
- G CWE-346: Origin Validation Error (p.837)

- V CWE-1385: Missing Origin Validation in WebSockets (p.2173)
- B CWE-749: Exposed Dangerous Method or Function (p.1518)
- V CWE-618: Exposed Unsafe ActiveX Method (p.1354)
- V CWE-782: Exposed IOCTL with Insufficient Access Control (p.1600)
- C CWE-923: Improper Restriction of Communication Channel to Intended Endpoints (p.1774)
- V CWE-1275: Sensitive Cookie with Improper SameSite Attribute (p.2036)
- V CWE-291: Reliance on IP Address for Authentication (p.695)
- V CWE-297: Improper Validation of Certificate with Host Mismatch (p.709)
- C CWE-300: Channel Accessible by Non-Endpoint (p.717)
- B CWE-419: Unprotected Primary Channel (p.998)
- B CWE-420: Unprotected Alternate Channel (p.999)
- B CWE-1299: Missing Protection Mechanism for Alternate Hardware Interface (p.2084)
- B CWE-421: Race Condition During Access to Alternate Channel (p.1001)
- V CWE-422: Unprotected Windows Messaging Channel ('Shatter') (p.1002)
- B CWE-940: Improper Verification of Source of a Communication Channel (p.1788)
- V CWE-925: Improper Verification of Intent by Broadcast Receiver (p.1777)
- B CWE-941: Incorrectly Specified Destination in a Communication Channel (p.1791)
- V CWE-942: Permissive Cross-domain Policy with Untrusted Domains (p.1793)
- P| CWE-435: Improper Interaction Between Multiple Correctly-Behaving Entities (p.1035)
- C CWE-1038: Insecure Automated Optimizations (p.1815)
- B CWE-1037: Processor Optimization Removal or Modification of Security-critical Code (p.1813)
- B CWE-733: Compiler Optimization Removal or Modification of Security-critical Code (p.1516)
- V CWE-14: Compiler Removal of Code to Clear Buffers (p.14)
- B CWE-188: Reliance on Data/Memory Layout (p.466)
- V CWE-198: Use of Incorrect Byte Ordering (p.500)
- C CWE-436: Interpretation Conflict (p.1037)
- V CWE-113: Improper Neutralization of CRLF Sequences in HTTP Headers ('HTTP Request/Response Splitting') (p.270)
- B CWE-115: Misinterpretation of Input (p.279)
- B CWE-437: Incomplete Model of Endpoint Features (p.1039)
- B CWE-444: Inconsistent Interpretation of HTTP Requests ('HTTP Request/Response Smuggling') (p.1046)
- V CWE-626: Null Byte Interaction Error (Poison Null Byte) (p.1368)
- V CWE-650: Trusting HTTP Permission Methods on the Server Side (p.1405)
- V CWE-86: Improper Neutralization of Invalid Characters in Identifiers in Web Pages (p.189)
- B CWE-439: Behavioral Change in New Version or Environment (p.1040)
- P| CWE-664: Improper Control of a Resource Through its Lifetime (p.1424)
- C CWE-118: Incorrect Access of Indexable Resource ('Range Error') (p.290)
- C CWE-119: Improper Restriction of Operations within the Bounds of a Memory Buffer (p.291)
- B CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.303)
- V CWE-785: Use of Path Manipulation Function without Maximum-sized Buffer (p.1608)
- B CWE-125: Out-of-bounds Read (p.327)
- V CWE-126: Buffer Over-read (p.332)
- V CWE-127: Buffer Under-read (p.335)
- B CWE-466: Return of Pointer Value Outside of Expected Range (p.1087)
- B CWE-680: Integer Overflow to Buffer Overflow (p.1457)
- B CWE-786: Access of Memory Location Before Start of Buffer (p.1610)
- B CWE-124: Buffer Underwrite ('Buffer Underflow') (p.324)
- V CWE-127: Buffer Under-read (p.335)
- B CWE-787: Out-of-bounds Write (p.1613)
- V CWE-121: Stack-based Buffer Overflow (p.312)
- V CWE-122: Heap-based Buffer Overflow (p.317)
- B CWE-123: Write-what-where Condition (p.321)
- B CWE-124: Buffer Underwrite ('Buffer Underflow') (p.324)
- B CWE-788: Access of Memory Location After End of Buffer (p.1621)
- V CWE-121: Stack-based Buffer Overflow (p.312)

- V CWE-122: Heap-based Buffer Overflow (p.317)
- V CWE-126: Buffer Over-read (p.332)
- B CWE-805: Buffer Access with Incorrect Length Value (p.1654)
- V CWE-806: Buffer Access Using Size of Source Buffer (p.1661)
- B CWE-822: Untrusted Pointer Dereference (p.1674)
- B CWE-823: Use of Out-of-range Pointer Offset (p.1677)
- B CWE-824: Access of Uninitialized Pointer (p.1680)
- B CWE-825: Expired Pointer Dereference (p.1682)
- V CWE-415: Double Free (p.989)
- V CWE-416: Use After Free (p.993)
- G CWE-1229: Creation of Emergent Resource (p.1939)
- G CWE-514: Covert Channel (p.1195)
- B CWE-385: Covert Timing Channel (p.922)
- B CWE-515: Covert Storage Channel (p.1196)
- B CWE-1250: Improper Preservation of Consistency Between Independent Representations of Shared State (p.1980)
- B CWE-1249: Application-Level Admin Tool with Inconsistent View of Underlying Operating System (p.1978)
- B CWE-1251: Mirrored Regions with Different Values (p.1981)
- B CWE-1329: Reliance on Component That is Not Updateable (p.2135)
- B CWE-1277: Firmware Not Updateable (p.2041)
- B CWE-1310: Missing Ability to Patch ROM Code (p.2099)
- G CWE-221: Information Loss or Omission (p.550)
- B CWE-222: Truncation of Security-relevant Information (p.551)
- B CWE-223: Omission of Security-relevant Information (p.552)
- B CWE-778: Insufficient Logging (p.1590)
- B CWE-224: Obscured Security-relevant Information by Alternate Name (p.554)
- B CWE-356: Product UI does not Warn User of Unsafe Actions (p.861)
- B CWE-396: Declaration of Catch for Generic Exception (p.941)
- B CWE-397: Declaration of Throws for Generic Exception (p.943)
- G CWE-451: User Interface (UI) Misrepresentation of Critical Information (p.1057)
- B CWE-1007: Insufficient Visual Distinction of Homoglyphs Presented to User (p.1800)
- B CWE-1021: Improper Restriction of Rendered UI Layers or Frames (p.1804)
- B CWE-372: Incomplete Internal State Distinction (p.901)
- G CWE-400: Uncontrolled Resource Consumption (p.946)
- B CWE-1235: Incorrect Use of Autoboxing and Unboxing for Performance Critical Operations (p.1949)
- B CWE-1246: Improper Write Handling in Limited-write Non-Volatile Memories (p.1970)
- B CWE-770: Allocation of Resources Without Limits or Throttling (p.1566)
- B CWE-1325: Improperly Controlled Sequential Memory Allocation (p.2127)
- V CWE-774: Allocation of File Descriptors or Handles Without Limits or Throttling (p.1582)
- V CWE-789: Memory Allocation with Excessive Size Value (p.1625)
- B CWE-771: Missing Reference to Active Allocated Resource (p.1574)
- V CWE-773: Missing Reference to Active File Descriptor or Handle (p.1581)
- B CWE-779: Logging of Excessive Data (p.1594)
- B CWE-920: Improper Restriction of Power Consumption (p.1770)
- G CWE-404: Improper Resource Shutdown or Release (p.961)
- B CWE-1266: Improper Scrubbing of Sensitive Data from Decommissioned Device (p.2017)
- B CWE-299: Improper Check for Certificate Revocation (p.715)
- V CWE-370: Missing Check for Certificate Revocation after Initial Check (p.900)
- B CWE-459: Incomplete Cleanup (p.1076)
- B CWE-226: Sensitive Information in Resource Not Removed Before Reuse (p.555)
- V CWE-1239: Improper Zeroization of Hardware Register (p.1954)
- B CWE-1272: Sensitive Information Uncleared Before Debug/Power State Transition (p.2030)
- B CWE-1301: Insufficient or Incomplete Data Removal within Hardware Component (p.2091)

- B CWE-611: Improper Restriction of XML External Entity Reference (p.1341)
- B CWE-73: External Control of File Name or Path (p.132)
- C CWE-114: Process Control (p.275)
- G CWE-662: Improper Synchronization (p.1420)
  - B CWE-1058: Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element (p.1837)
  - B CWE-663: Use of a Non-reentrant Function in a Concurrent Context (p.1423)
  - V CWE-479: Signal Handler Use of a Non-reentrant Function (p.1125)
  - V CWE-558: Use of getlogin() in Multithreaded Application (p.1247)
- C CWE-667: Improper Locking (p.1433)
  - B CWE-1232: Improper Lock Behavior After Power State Transition (p.1943)
  - B CWE-1233: Security-Sensitive Hardware Controls with Missing Lock Bit Protection (p.1945)
  - B CWE-1234: Hardware Internal or Debug Modes Allow Override of Locks (p.1947)
  - B CWE-412: Unrestricted Externally Accessible Lock (p.982)
  - B CWE-413: Improper Resource Locking (p.984)
  - V CWE-591: Sensitive Data Storage in Improperly Locked Memory (p.1304)
  - B CWE-414: Missing Lock Check (p.988)
  - B CWE-609: Double-Checked Locking (p.1337)
  - B CWE-764: Multiple Locks of a Critical Resource (p.1556)
  - B CWE-765: Multiple Unlocks of a Critical Resource (p.1558)
  - B CWE-832: Unlock of a Resource that is not Locked (p.1702)
  - B CWE-833: Deadlock (p.1704)
- B CWE-820: Missing Synchronization (p.1671)
  - V CWE-1096: Singleton Class Instance Creation without Proper Locking or Synchronization (p.1876)
  - V CWE-543: Use of Singleton Pattern Without Synchronization in a Multithreaded Context (p.1230)
  - B CWE-567: Unsynchronized Access to Shared Data in a Multithreaded Context (p.1262)
- B CWE-821: Incorrect Synchronization (p.1673)
  - B CWE-1088: Synchronous Access of Remote Resource without Timeout (p.1868)
  - B CWE-1264: Hardware Logic with Insecure De-Synchronization between Control and Data Channels (p.2012)
  - V CWE-572: Call to Thread run() instead of start() (p.1271)
  - V CWE-574: EJB Bad Practices: Use of Synchronization Primitives (p.1274)
- G CWE-665: Improper Initialization (p.1426)
  - B CWE-1051: Initialization with Hard-Coded Network Resource Configuration Data (p.1830)
  - B CWE-1052: Excessive Use of Hard-Coded Literals in Initialization (p.1831)
  - B CWE-1188: Insecure Default Initialization of Resource (p.1913)
  - V CWE-453: Insecure Default Variable Initialization (p.1061)
  - B CWE-1221: Incorrect Register Defaults or Module Parameters (p.1930)
  - B CWE-1279: Cryptographic Operations are run Before Supporting Units are Ready (p.2045)
  - B CWE-454: External Initialization of Trusted Variables or Data Stores (p.1063)
  - B CWE-455: Non-exit on Failed Initialization (p.1065)
  - B CWE-770: Allocation of Resources Without Limits or Throttling (p.1566)
  - B CWE-1325: Improperly Controlled Sequential Memory Allocation (p.2127)
  - V CWE-774: Allocation of File Descriptors or Handles Without Limits or Throttling (p.1582)
  - V CWE-789: Memory Allocation with Excessive Size Value (p.1625)
- B CWE-908: Use of Uninitialized Resource (p.1742)
  - V CWE-457: Use of Uninitialized Variable (p.1072)
- B CWE-909: Missing Initialization of Resource (p.1746)
  - B CWE-1271: Uninitialized Value on Reset for Registers Holding Security Settings (p.2028)
  - V CWE-456: Missing Initialization of a Variable (p.1067)
- G CWE-666: Operation on Resource in Wrong Phase of Lifetime (p.1432)
  - V CWE-415: Double Free (p.989)
  - V CWE-593: Authentication Bypass: OpenSSL CTX Object Modified after SSL Objects are Created (p.1305)

- B CWE-605: Multiple Binds to the Same Port (p.1331)
- C CWE-672: Operation on a Resource after Expiration or Release (p.1444)
  - V CWE-298: Improper Validation of Certificate Expiration (p.713)
  - B CWE-324: Use of a Key Past its Expiration Date (p.779)
  - B CWE-613: Insufficient Session Expiration (p.1345)
  - B CWE-825: Expired Pointer Dereference (p.1682)
    - V CWE-415: Double Free (p.989)
    - V CWE-416: Use After Free (p.993)
  - B CWE-910: Use of Expired File Descriptor (p.1749)
- B CWE-826: Premature Release of Resource During Expected Lifetime (p.1685)
- C CWE-668: Exposure of Resource to Wrong Sphere (p.1438)
  - B CWE-1189: Improper Isolation of Shared Resources on System-on-a-Chip (SoC) (p.1914)
    - B CWE-1303: Non-Transparent Sharing of Microarchitectural Resources (p.2094)
  - B CWE-1282: Assumed-Immutable Data is Stored in Writable Memory (p.2051)
  - B CWE-1327: Binding to an Unrestricted IP Address (p.2131)
  - B CWE-1331: Improper Isolation of Shared Resources in Network On Chip (NoC) (p.2140)
  - B CWE-134: Use of Externally-Controlled Format String (p.362)
  - C CWE-200: Exposure of Sensitive Information to an Unauthorized Actor (p.501)
    - B CWE-1258: Exposure of Sensitive System Information Due to Uncleared Debug Information (p.1999)
    - B CWE-1273: Device Unlock Credential Sharing (p.2032)
    - B CWE-1295: Debug Messages Revealing Unnecessary Information (p.2076)
    - B CWE-201: Insertion of Sensitive Information Into Sent Data (p.510)
      - V CWE-598: Use of GET Request Method With Sensitive Query Strings (p.1315)
    - B CWE-203: Observable Discrepancy (p.514)
      - B CWE-1300: Improper Protection of Physical Side Channels (p.2087)
        - V CWE-1255: Comparison Logic is Vulnerable to Power Side-Channel Attacks (p.1989)
      - B CWE-1303: Non-Transparent Sharing of Microarchitectural Resources (p.2094)
      - B CWE-204: Observable Response Discrepancy (p.519)
      - B CWE-205: Observable Behavioral Discrepancy (p.522)
        - V CWE-206: Observable Internal Behavioral Discrepancy (p.523)
        - V CWE-207: Observable Behavioral Discrepancy With Equivalent Products (p.524)
    - B CWE-208: Observable Timing Discrepancy (p.526)
      - B CWE-1254: Incorrect Comparison Logic Granularity (p.1987)
  - B CWE-209: Generation of Error Message Containing Sensitive Information (p.528)
    - B CWE-210: Self-generated Error Message Containing Sensitive Information (p.534)
    - B CWE-211: Externally-Generated Error Message Containing Sensitive Information (p.536)
      - V CWE-535: Exposure of Information Through Shell Error Message (p.1220)
      - V CWE-536: Servlet Runtime Error Message Containing Sensitive Information (p.1221)
      - V CWE-537: Java Runtime Error Message Containing Sensitive Information (p.1222)
      - V CWE-550: Server-generated Error Message Containing Sensitive Information (p.1238)
  - B CWE-213: Exposure of Sensitive Information Due to Incompatible Policies (p.541)
  - B CWE-215: Insertion of Sensitive Information Into Debugging Code (p.545)
  - B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.865)
  - B CWE-497: Exposure of Sensitive System Information to an Unauthorized Control Sphere (p.1170)
    - B CWE-214: Invocation of Process Using Visible Sensitive Information (p.543)
      - V CWE-548: Exposure of Information Through Directory Listing (p.1236)
  - B CWE-538: Insertion of Sensitive Information into Externally-Accessible File or Directory (p.1224)
    - B CWE-532: Insertion of Sensitive Information into Log File (p.1217)
    - B CWE-540: Inclusion of Sensitive Information in Source Code (p.1227)
      - V CWE-531: Inclusion of Sensitive Information in Test Code (p.1216)

- V CWE-541: Inclusion of Sensitive Information in an Include File (p.1228)
- V CWE-615: Inclusion of Sensitive Information in Source Code Comments (p.1348)
- V CWE-651: Exposure of WSDL File Containing Sensitive Information (p.1407)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - B CWE-23: Relative Path Traversal (p.46)
    - V CWE-24: Path Traversal: '../filedir' (p.53)
    - V CWE-25: Path Traversal: '/../filedir' (p.54)
    - V CWE-26: Path Traversal: '/dir../filename' (p.56)
    - V CWE-27: Path Traversal: 'dir../filename' (p.57)
    - V CWE-28: Path Traversal: '..filedir' (p.59)
    - V CWE-29: Path Traversal: '..filename' (p.61)
    - V CWE-30: Path Traversal: 'dir..filename' (p.63)
    - V CWE-31: Path Traversal: 'dir..\filename' (p.64)
    - V CWE-32: Path Traversal: '...' (Triple Dot) (p.66)
    - V CWE-33: Path Traversal: '....' (Multiple Dot) (p.68)

    - V CWE-142: Improper Neutralization of Value Delimiters (p.377)
    - V CWE-143: Improper Neutralization of Record Delimiters (p.379)
    - V CWE-144: Improper Neutralization of Line Delimiters (p.381)
    - V CWE-145: Improper Neutralization of Section Delimiters (p.383)
    - V CWE-146: Improper Neutralization of Expression/Command Delimiters (p.384)
  - V CWE-147: Improper Neutralization of Input Terminators (p.386)
    - V CWE-626: Null Byte Interaction Error (Poison Null Byte) (p.1368)
  - V CWE-148: Improper Neutralization of Input Leaders (p.388)
  - V CWE-149: Improper Neutralization of Quoting Syntax (p.389)
  - V CWE-150: Improper Neutralization of Escape, Meta, or Control Sequences (p.391)
  - V CWE-151: Improper Neutralization of Comment Delimiters (p.394)
  - V CWE-152: Improper Neutralization of Macro Symbols (p.395)
  - V CWE-153: Improper Neutralization of Substitution Characters (p.397)
  - V CWE-154: Improper Neutralization of Variable Name Delimiters (p.399)
  - V CWE-155: Improper Neutralization of Wildcards or Matching Symbols (p.401)
    - V CWE-56: Path Equivalence: 'filedir\*' (Wildcard) (p.107)
  - V CWE-156: Improper Neutralization of Whitespace (p.402)
  - V CWE-157: Failure to Sanitize Paired Delimiters (p.404)
  - V CWE-158: Improper Neutralization of Null Byte or NUL Character (p.406)
  - G CWE-159: Improper Handling of Invalid Use of Special Elements (p.409)
    - B CWE-166: Improper Handling of Missing Special Element (p.420)
    - B CWE-167: Improper Handling of Additional Special Element (p.422)
    - B CWE-168: Improper Handling of Inconsistent Special Elements (p.423)
  - V CWE-160: Improper Neutralization of Leading Special Elements (p.411)
    - V CWE-161: Improper Neutralization of Multiple Leading Special Elements (p.412)
      - V CWE-50: Path Equivalence: '/multiple/leading/slash' (p.100)
    - V CWE-37: Path Traversal: '/absolute/pathname/here' (p.78)
  - V CWE-162: Improper Neutralization of Trailing Special Elements (p.414)
    - V CWE-163: Improper Neutralization of Multiple Trailing Special Elements (p.415)
      - V CWE-43: Path Equivalence: 'filename....' (Multiple Trailing Dot) (p.93)
      - V CWE-52: Path Equivalence: '/multiple/trailing/slash/' (p.103)
    - V CWE-42: Path Equivalence: 'filename.' (Trailing Dot) (p.92)
      - V CWE-43: Path Equivalence: 'filename....' (Multiple Trailing Dot) (p.93)
    - V CWE-46: Path Equivalence: 'filename ' (Trailing Space) (p.96)
    - V CWE-49: Path Equivalence: 'filename/' (Trailing Slash) (p.99)
    - V CWE-54: Path Equivalence: 'filedir\' (Trailing Backslash) (p.105)
  - V CWE-164: Improper Neutralization of Internal Special Elements (p.417)
    - V CWE-165: Improper Neutralization of Multiple Internal Special Elements (p.419)
      - V CWE-45: Path Equivalence: 'file...name' (Multiple Internal Dot) (p.95)
      - V CWE-53: Path Equivalence: '\multiple\\internal\\backslash' (p.104)
  - B CWE-464: Addition of Data Structure Sentinel (p.1085)
- G CWE-790: Improper Filtering of Special Elements (p.1630)
  - B CWE-791: Incomplete Filtering of Special Elements (p.1632)
    - V CWE-792: Incomplete Filtering of One or More Instances of Special Elements (p.1633)
      - V CWE-793: Only Filtering One Instance of a Special Element (p.1634)
      - V CWE-794: Incomplete Filtering of Multiple Instances of Special Elements (p.1636)
    - B CWE-795: Only Filtering Special Elements at a Specified Location (p.1637)
      - V CWE-796: Only Filtering Special Elements Relative to a Marker (p.1639)
      - V CWE-797: Only Filtering Special Elements at an Absolute Position (p.1640)
- B CWE-170: Improper Null Termination (p.425)
- G CWE-172: Encoding Error (p.429)
  - V CWE-173: Improper Handling of Alternate Encoding (p.431)
  - V CWE-174: Double Decoding of the Same Data (p.433)

- V CWE-175: Improper Handling of Mixed Encoding (p.435)
- V CWE-176: Improper Handling of Unicode Encoding (p.437)
- V CWE-177: Improper Handling of URL Encoding (Hex Encoding) (p.439)
- G CWE-20: Improper Input Validation (p.20)
  - B CWE-1173: Improper Use of Validation Framework (p.1908)
    - V CWE-102: Struts: Duplicate Validation Forms (p.245)
    - V CWE-105: Struts: Form Field Without Validator (p.252)
    - V CWE-106: Struts: Plug-in Framework not in Use (p.255)
    - V CWE-108: Struts: Unvalidated Action Form (p.260)
    - V CWE-109: Struts: Validator Turned Off (p.261)
    - V CWE-1174: ASP.NET Misconfiguration: Improper Model Validation (p.1910)
    - V CWE-554: ASP.NET Misconfiguration: Not Using Input Validation Framework (p.1244)
  - B CWE-1284: Improper Validation of Specified Quantity in Input (p.2054)
    - B CWE-606: Unchecked Input for Loop Condition (p.1332)
    - V CWE-789: Memory Allocation with Excessive Size Value (p.1625)
  - B CWE-1285: Improper Validation of Specified Index, Position, or Offset in Input (p.2056)
    - V CWE-129: Improper Validation of Array Index (p.339)
    - V CWE-781: Improper Address Validation in IOCTL with METHOD\_NEITHER I/O Control Code (p.1598)
  - B CWE-1286: Improper Validation of Syntactic Correctness of Input (p.2060)
    - B CWE-112: Missing XML Validation (p.268)
  - B CWE-1287: Improper Validation of Specified Type of Input (p.2062)
  - B CWE-1288: Improper Validation of Consistency within Input (p.2063)
  - B CWE-1289: Improper Validation of Unsafe Equivalence in Input (p.2065)
  - B CWE-179: Incorrect Behavior Order: Early Validation (p.445)
    - V CWE-180: Incorrect Behavior Order: Validate Before Canonicalize (p.448)
    - V CWE-181: Incorrect Behavior Order: Validate Before Filter (p.450)
  - V CWE-622: Improper Validation of Function Hook Arguments (p.1361)
- G CWE-228: Improper Handling of Syntactically Invalid Structure (p.559)
  - B CWE-229: Improper Handling of Values (p.561)
    - V CWE-230: Improper Handling of Missing Values (p.562)
    - V CWE-231: Improper Handling of Extra Values (p.563)
    - V CWE-232: Improper Handling of Undefined Values (p.564)
  - B CWE-233: Improper Handling of Parameters (p.565)
    - V CWE-234: Failure to Handle Missing Parameter (p.567)
    - V CWE-235: Improper Handling of Extra Parameters (p.570)
    - V CWE-236: Improper Handling of Undefined Parameters (p.571)
  - B CWE-237: Improper Handling of Structural Elements (p.572)
    - V CWE-238: Improper Handling of Incomplete Structural Elements (p.572)
    - V CWE-239: Failure to Handle Incomplete Element (p.573)
    - B CWE-240: Improper Handling of Inconsistent Structural Elements (p.574)
      - B CWE-130: Improper Handling of Length Parameter Inconsistency (p.348)
  - B CWE-241: Improper Handling of Unexpected Data Type (p.575)
- B CWE-240: Improper Handling of Inconsistent Structural Elements (p.574)
  - B CWE-130: Improper Handling of Length Parameter Inconsistency (p.348)
- B CWE-463: Deletion of Data Structure Sentinel (p.1083)
- G CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.136)
  - B CWE-1236: Improper Neutralization of Formula Elements in a CSV File (p.1951)
  - G CWE-75: Failure to Sanitize Special Elements into a Different Plane (Special Element Injection) (p.142)
    - B CWE-76: Improper Neutralization of Equivalent Special Elements (p.143)
  - G CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.144)
    - B CWE-624: Executable Regular Expression Error (p.1364)

- B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
- B CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.193)
- B CWE-917: Improper Neutralization of Special Elements used in an Expression Language Statement ('Expression Language Injection') (p.1765)
- B CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
- B CWE-692: Incomplete Denylist to Cross-Site Scripting (p.1480)
- V CWE-80: Improper Neutralization of Script-Related HTML Tags in a Web Page (Basic XSS) (p.176)
- V CWE-81: Improper Neutralization of Script in an Error Message Web Page (p.179)
- V CWE-83: Improper Neutralization of Script in Attributes in a Web Page (p.183)
- V CWE-82: Improper Neutralization of Script in Attributes of IMG Tags in a Web Page (p.181)
- V CWE-84: Improper Neutralization of Encoded URI Schemes in a Web Page (p.185)
- V CWE-85: Doubled Character XSS Manipulations (p.187)
- V CWE-86: Improper Neutralization of Invalid Characters in Identifiers in Web Pages (p.189)
- V CWE-87: Improper Neutralization of Alternate XSS Syntax (p.191)
- B CWE-91: XML Injection (aka Blind XPath Injection) (p.214)
- B CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1393)
- B CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1408)
- B CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.217)
- V CWE-113: Improper Neutralization of CRLF Sequences in HTTP Headers ('HTTP Request/Response Splitting') (p.270)
- B CWE-94: Improper Control of Generation of Code ('Code Injection') (p.219)
- B CWE-1336: Improper Neutralization of Special Elements Used in a Template Engine (p.2153)
- V CWE-95: Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection') (p.225)
- B CWE-96: Improper Neutralization of Directives in Statically Saved Code ('Static Code Injection') (p.231)
- V CWE-97: Improper Neutralization of Server-Side Includes (SSI) Within a Web Page (p.234)
- C CWE-943: Improper Neutralization of Special Elements in Data Query Logic (p.1796)
- B CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1393)
- B CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1408)
- B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
- V CWE-564: SQL Injection: Hibernate (p.1257)
- B CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.212)
- C CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.242)
- B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1385)
- B CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1483)
- V CWE-102: Struts: Duplicate Validation Forms (p.245)
- V CWE-462: Duplicate Key in Associative List (Alist) (p.1082)
- B CWE-914: Improper Control of Dynamically-Identified Variables (p.1755)
- V CWE-621: Variable Extraction Error (p.1359)
- V CWE-627: Dynamic Variable Evaluation (p.1370)
- P CWE-710: Improper Adherence to Coding Standards (p.1504)
- B CWE-1041: Use of Redundant Code (p.1818)
- B CWE-1044: Architecture with Number of Horizontal Layers Outside of Expected Range (p.1822)
- B CWE-1048: Invokable Control Element with Large Number of Outward Calls (p.1826)
- C CWE-1059: Insufficient Technical Documentation (p.1838)

- B CWE-1053: Missing Documentation for Design (p.1832)
- B CWE-1110: Incomplete Design Documentation (p.1890)
- B CWE-1111: Incomplete I/O Documentation (p.1891)
- B CWE-1112: Incomplete Documentation of Program Execution (p.1892)
- B CWE-1118: Insufficient Documentation of Error Handling Techniques (p.1898)
- C CWE-1061: Insufficient Encapsulation (p.1841)
  - B CWE-1054: Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (p.1833)
  - B CWE-1057: Data Access Operations Outside of Expected Data Manager Component (p.1836)
  - B CWE-1062: Parent Class with References to Child Class (p.1842)
  - B CWE-1083: Data Access from Outside Expected Data Manager Component (p.1863)
  - B CWE-1090: Method Containing Access of a Member Element from Another Class (p.1870)
  - B CWE-1100: Insufficient Isolation of System-Dependent Functions (p.1881)
  - B CWE-1105: Insufficient Encapsulation of Machine-Dependent Functionality (p.1885)
    - B CWE-188: Reliance on Data/Memory Layout (p.466)
    - V CWE-198: Use of Incorrect Byte Ordering (p.500)
  - B CWE-766: Critical Data Element Declared Public (p.1559)
- B CWE-1065: Runtime Resource Management Control Element in a Component Built to Run on Application Servers (p.1845)
- B CWE-1066: Missing Serialization Control Element (p.1846)
- B CWE-1068: Inconsistency Between Implementation and Documented Design (p.1848)
- B CWE-1070: Serializable Data Element Containing non-Serializable Item Elements (p.1851)
- C CWE-1076: Insufficient Adherence to Expected Conventions (p.1857)
  - B CWE-1045: Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor (p.1823)
  - C CWE-1078: Inappropriate Source Code Style or Formatting (p.1859)
    - B CWE-1085: Invokable Control Element with Excessive Volume of Commented-out Code (p.1865)
  - B CWE-1099: Inconsistent Naming Conventions for Identifiers (p.1880)
  - B CWE-1106: Insufficient Use of Symbolic Constants (p.1886)
  - B CWE-1107: Insufficient Isolation of Symbolic Constant Definitions (p.1887)
  - B CWE-1109: Use of Same Variable for Multiple Purposes (p.1889)
  - B CWE-1113: Inappropriate Comment Style (p.1893)
  - B CWE-1114: Inappropriate Whitespace Style (p.1894)
  - B CWE-1115: Source Code Element without Standard Prologue (p.1894)
  - B CWE-1116: Inaccurate Comments (p.1895)
  - B CWE-1117: Callable with Insufficient Behavioral Summary (p.1897)
  - V CWE-546: Suspicious Comment (p.1233)
  - B CWE-547: Use of Hard-coded, Security-relevant Constants (p.1234)
- B CWE-1079: Parent Class without Virtual Destructor Method (p.1860)
- B CWE-1082: Class Instance Self Destruction Control Element (p.1862)
- B CWE-1087: Class with Virtual Method without a Virtual Destructor (p.1867)
- B CWE-1091: Use of Object without Invoking Destructor Method (p.1871)
- B CWE-1097: Persistent Storable Data Element without Associated Comparison Control Element (p.1878)
- B CWE-1098: Data Element containing Pointer Item without Proper Copy Control Element (p.1879)
- B CWE-1108: Excessive Reliance on Global Variables (p.1888)
- B CWE-586: Explicit Call to Finalize() (p.1295)
- B CWE-1092: Use of Same Invokable Control Element in Multiple Architectural Layers (p.1872)
- C CWE-1093: Excessively Complex Data Representation (p.1873)
  - B CWE-1043: Data Element Aggregating an Excessively Large Number of Non-Primitive Elements (p.1821)
  - B CWE-1055: Multiple Inheritance from Concrete Classes (p.1834)
  - B CWE-1074: Class with Excessively Deep Inheritance (p.1855)
  - B CWE-1086: Class with Excessive Number of Child Classes (p.1866)
- B CWE-1101: Reliance on Runtime Component in Generated Code (p.1882)

- C CWE-1120: Excessive Code Complexity (p.1900)
  - B CWE-1047: Modules with Circular Dependencies (p.1825)
  - B CWE-1056: Invokable Control Element with Variadic Parameters (p.1835)
  - B CWE-1060: Excessive Number of Inefficient Server-Side Data Accesses (p.1840)
  - B CWE-1064: Invokable Control Element with Signature Containing an Excessive Number of Parameters (p.1844)
  - B CWE-1075: Unconditional Control Flow Transfer outside of Switch Block (p.1856)
  - B CWE-1080: Source Code File with Excessive Number of Lines of Code (p.1861)
  - B CWE-1095: Loop Condition Value Update within the Loop (p.1875)
  - B CWE-1119: Excessive Use of Unconditional Branching (p.1899)
  - B CWE-1121: Excessive McCabe Cyclomatic Complexity (p.1901)
  - B CWE-1122: Excessive Halstead Complexity (p.1902)
  - B CWE-1123: Excessive Use of Self-Modifying Code (p.1903)
  - B CWE-1124: Excessively Deep Nesting (p.1904)
  - B CWE-1125: Excessive Attack Surface (p.1905)
- B CWE-1126: Declaration of Variable with Unnecessarily Wide Scope (p.1906)
- B CWE-1127: Compilation with Insufficient Warnings or Errors (p.1907)
- C CWE-1164: Irrelevant Code (p.1907)
  - V CWE-107: Struts: Unused Validation Form (p.257)
  - B CWE-1071: Empty Code Block (p.1852)
  - V CWE-1069: Empty Exception Block (p.1849)

- G CWE-300: Channel Accessible by Non-Endpoint (p.717)
- B CWE-341: Predictable from Observable State (p.827)
- B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.865)
- B CWE-403: Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak') (p.959)
- B CWE-419: Unprotected Primary Channel (p.998)
- B CWE-420: Unprotected Alternate Channel (p.999)
- B CWE-425: Direct Request ('Forced Browsing') (p.1005)
- B CWE-426: Untrusted Search Path (p.1008)
- B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1028)
- V CWE-527: Exposure of Version-Control Repository to an Unauthorized Control Sphere (p.1212)
- V CWE-528: Exposure of Core Dump File to an Unauthorized Control Sphere (p.1213)
- V CWE-529: Exposure of Access Control List Files to an Unauthorized Control Sphere (p.1214)
- V CWE-530: Exposure of Backup File to an Unauthorized Control Sphere (p.1215)
- B CWE-538: Insertion of Sensitive Information into Externally-Accessible File or Directory (p.1224)
- B CWE-551: Incorrect Behavior Order: Authorization Before Parsing and Canonicalization (p.1239)
- B CWE-552: Files or Directories Accessible to External Parties (p.1240)
- V CWE-566: Authorization Bypass Through User-Controlled SQL Primary Key (p.1261)
- B CWE-639: Authorization Bypass Through User-Controlled Key (p.1380)
- G CWE-642: External Control of Critical State Data (p.1387)
- V CWE-647: Use of Non-Canonical URL Paths for Authorization Decisions (p.1399)
- B CWE-653: Improper Isolation or Compartmentalization (p.1410)
- G CWE-656: Reliance on Security Through Obscurity (p.1417)
- G CWE-668: Exposure of Resource to Wrong Sphere (p.1438)
- G CWE-669: Incorrect Resource Transfer Between Spheres (p.1441)
- G CWE-671: Lack of Administrator Control over Security (p.1444)
- G CWE-673: External Influence of Sphere Definition (p.1448)
- B CWE-708: Incorrect Ownership Assignment (p.1502)
- G CWE-732: Incorrect Permission Assignment for Critical Resource (p.1506)
- B CWE-770: Allocation of Resources Without Limits or Throttling (p.1566)
- V CWE-782: Exposed IOCTL with Insufficient Access Control (p.1600)
- V CWE-827: Improper Control of Document Type Definition (p.1687)
- G CWE-862: Missing Authorization (p.1730)
- G CWE-863: Incorrect Authorization (p.1736)
- B CWE-921: Storage of Sensitive Data in a Mechanism without Access Control (p.1772)
- G CWE-923: Improper Restriction of Communication Channel to Intended Endpoints (p.1774)
- B CWE-939: Improper Authorization in Handler for Custom URL Scheme (p.1785)
- V CWE-942: Permissive Cross-domain Policy with Untrusted Domains (p.1793)
- C CWE-1012: Cross Cutting (p.2345)
- B CWE-208: Observable Timing Discrepancy (p.526)
- B CWE-392: Missing Report of Error Condition (p.933)
- B CWE-460: Improper Cleanup on Thrown Exception (p.1080)
- B CWE-544: Missing Standardized Error Handling Mechanism (p.1232)
- G CWE-602: Client-Side Enforcement of Server-Side Security (p.1325)
- P CWE-703: Improper Check or Handling of Exceptional Conditions (p.1493)
- G CWE-754: Improper Check for Unusual or Exceptional Conditions (p.1522)

- V CWE-784: Reliance on Cookies without Validation and Integrity Checking in a Security Decision (p.1605)
- B CWE-807: Reliance on Untrusted Inputs in a Security Decision (p.1665)
- C CWE-1013: Encrypt Data (p.2346)
  - B CWE-256: Plaintext Storage of a Password (p.605)
  - B CWE-257: Storing Passwords in a Recoverable Format (p.608)
  - B CWE-260: Password in Configuration File (p.618)
  - B CWE-261: Weak Encoding for Password (p.621)
  - G CWE-311: Missing Encryption of Sensitive Data (p.744)
  - B CWE-312: Cleartext Storage of Sensitive Information (p.751)
  - V CWE-313: Cleartext Storage in a File or on Disk (p.757)
  - V CWE-314: Cleartext Storage in the Registry (p.759)
  - V CWE-315: Cleartext Storage of Sensitive Information in a Cookie (p.761)
  - V CWE-316: Cleartext Storage of Sensitive Information in Memory (p.762)
  - V CWE-317: Cleartext Storage of Sensitive Information in GUI (p.764)
  - V CWE-318: Cleartext Storage of Sensitive Information in Executable (p.765)
  - B CWE-319: Cleartext Transmission of Sensitive Information (p.766)
  - V CWE-321: Use of Hard-coded Cryptographic Key (p.772)
  - B CWE-323: Reusing a Nonce, Key Pair in Encryption (p.777)
  - B CWE-324: Use of a Key Past its Expiration Date (p.779)
  - B CWE-325: Missing Cryptographic Step (p.781)
  - G CWE-326: Inadequate Encryption Strength (p.783)
  - G CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.785)
  - B CWE-328: Use of Weak Hash (p.792)
  - G CWE-330: Use of Insufficiently Random Values (p.799)
  - B CWE-331: Insufficient Entropy (p.806)
  - V CWE-332: Insufficient Entropy in PRNG (p.808)
  - V CWE-333: Improper Handling of Insufficient Entropy in TRNG (p.810)
  - B CWE-334: Small Space of Random Values (p.812)
  - B CWE-335: Incorrect Usage of Seeds in Pseudo-Random Number Generator (PRNG) (p.814)
  - V CWE-336: Same Seed in Pseudo-Random Number Generator (PRNG) (p.817)
  - V CWE-337: Predictable Seed in Pseudo-Random Number Generator (PRNG) (p.819)
  - B CWE-338: Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG) (p.821)
  - V CWE-339: Small Seed Space in PRNG (p.824)
  - B CWE-347: Improper Verification of Cryptographic Signature (p.840)
  - G CWE-522: Insufficiently Protected Credentials (p.1201)
  - B CWE-523: Unprotected Transport of Credentials (p.1206)
  - B CWE-757: Selection of Less-Secure Algorithm During Negotiation ('Algorithm Downgrade') (p.1533)
  - V CWE-759: Use of a One-Way Hash without a Salt (p.1537)
  - V CWE-760: Use of a One-Way Hash with a Predictable Salt (p.1542)
  - V CWE-780: Use of RSA Algorithm without OAEP (p.1596)
  - G CWE-922: Insecure Storage of Sensitive Information (p.1773)
- C CWE-1014: Identify Actors (p.2347)
  - B CWE-295: Improper Certificate Validation (p.701)
  - B CWE-296: Improper Following of a Certificate's Chain of Trust (p.706)
  - V CWE-297: Improper Validation of Certificate with Host Mismatch (p.709)
  - V CWE-298: Improper Validation of Certificate Expiration (p.713)
  - B CWE-299: Improper Check for Certificate Revocation (p.715)
  - G CWE-345: Insufficient Verification of Data Authenticity (p.834)
  - G CWE-346: Origin Validation Error (p.837)
  - V CWE-370: Missing Check for Certificate Revocation after Initial Check (p.900)
  - G CWE-441: Unintended Proxy or Intermediary ('Confused Deputy') (p.1042)
  - V CWE-599: Missing Validation of OpenSSL Certificate (p.1316)
  - B CWE-940: Improper Verification of Source of a Communication Channel (p.1788)

- B CWE-941: Incorrectly Specified Destination in a Communication Channel (p.1791)
- C CWE-1015: Limit Access (p.2348)
  - B CWE-201: Insertion of Sensitive Information Into Sent Data (p.510)
  - B CWE-209: Generation of Error Message Containing Sensitive Information (p.528)
  - B CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.538)
  - V CWE-243: Creation of chroot Jail Without Changing Working Directory (p.579)
  - B CWE-250: Execution with Unnecessary Privileges (p.589)
  - C CWE-610: Externally Controlled Reference to a Resource in Another Sphere (p.1339)
  - B CWE-611: Improper Restriction of XML External Entity Reference (p.1341)
  - B CWE-73: External Control of File Name or Path (p.132)
- C CWE-1016: Limit Exposure (p.2349)
  - B CWE-210: Self-generated Error Message Containing Sensitive Information (p.534)
  - B CWE-211: Externally-Generated Error Message Containing Sensitive Information (p.536)
  - B CWE-214: Invocation of Process Using Visible Sensitive Information (p.543)
  - V CWE-550: Server-generated Error Message Containing Sensitive Information (p.1238)
  - B CWE-829: Inclusion of Functionality from Untrusted Control Sphere (p.1692)
  - V CWE-830: Inclusion of Web Functionality from an Untrusted Source (p.1698)
- C CWE-1017: Lock Computer (p.2350)
  - B CWE-645: Overly Restrictive Account Lockout Mechanism (p.1397)
- C CWE-1018: Manage User Sessions (p.2351)
  - B CWE-384: Session Fixation (p.919)
  - B CWE-488: Exposure of Data Element to Wrong Session (p.1145)
  - V CWE-579: J2EE Bad Practices: Non-serializable Object Stored in Session (p.1284)
  - V CWE-6: J2EE Misconfiguration: Insufficient Session-ID Length (p.2)
  - B CWE-613: Insufficient Session Expiration (p.1345)
  - B CWE-841: Improper Enforcement of Behavioral Workflow (p.1721)
- C CWE-1019: Validate Inputs (p.2351)
  - C CWE-138: Improper Neutralization of Special Elements (p.371)
  - V CWE-150: Improper Neutralization of Escape, Meta, or Control Sequences (p.391)
  - C CWE-20: Improper Input Validation (p.20)
  - B CWE-349: Acceptance of Extraneous Untrusted Data With Trusted Data (p.844)
  - B CWE-352: Cross-Site Request Forgery (CSRF) (p.851)
  - B CWE-472: External Control of Assumed-Immutable Web Parameter (p.1101)
  - V CWE-473: PHP External Variable Modification (p.1105)
  - B CWE-502: Deserialization of Untrusted Data (p.1181)
  - B CWE-59: Improper Link Resolution Before File Access ('Link Following') (p.111)
  - B CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1319)
  - B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1385)
  - B CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1393)
  - B CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1408)
  - C CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.136)
  - C CWE-75: Failure to Sanitize Special Elements into a Different Plane (Special Element Injection) (p.142)
  - B CWE-76: Improper Neutralization of Equivalent Special Elements (p.143)
  - C CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.144)
  - B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
  - B CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
  - C CWE-790: Improper Filtering of Special Elements (p.1630)
  - B CWE-791: Incomplete Filtering of Special Elements (p.1632)
  - V CWE-792: Incomplete Filtering of One or More Instances of Special Elements (p.1633)
  - V CWE-793: Only Filtering One Instance of a Special Element (p.1634)
  - V CWE-794: Incomplete Filtering of Multiple Instances of Special Elements (p.1636)

- B CWE-795: Only Filtering Special Elements at a Specified Location (*p.1637*)
- V CWE-796: Only Filtering Special Elements Relative to a Marker (*p.1639*)
- V CWE-797: Only Filtering Special Elements at an Absolute Position (*p.1640*)
- B CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (*p.193*)
- B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (*p.200*)
- B CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (*p.212*)
- B CWE-91: XML Injection (aka Blind XPath Injection) (*p.214*)
- B CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (*p.217*)
- B CWE-94: Improper Control of Generation of Code ('Code Injection') (*p.219*)
- G CWE-943: Improper Neutralization of Special Elements in Data Query Logic (*p.1796*)
- V CWE-95: Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection') (*p.225*)
- B CWE-96: Improper Neutralization of Directives in Statically Saved Code ('Static Code Injection') (*p.231*)
- V CWE-97: Improper Neutralization of Server-Side Includes (SSI) Within a Web Page (*p.234*)
- V CWE-98: Improper Control of Filename for Include/Require Statement in PHP Program ('PHP Remote File Inclusion') (*p.235*)
- G CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (*p.242*)
- C CWE-1020: Verify Message Integrity (*p.2353*)
- B CWE-353: Missing Support for Integrity Check (*p.857*)
- B CWE-354: Improper Validation of Integrity Check Value (*p.859*)
- B CWE-390: Detection of Error Condition Without Action (*p.925*)
- B CWE-391: Unchecked Error Condition (*p.930*)
- B CWE-494: Download of Code Without Integrity Check (*p.1161*)
- B CWE-565: Reliance on Cookies without Validation and Integrity Checking (*p.1258*)
- B CWE-649: Reliance on Obfuscation or Encryption of Security-Relevant Inputs without Integrity Checking (*p.1403*)
- P CWE-707: Improper Neutralization (*p.1500*)
- G CWE-755: Improper Handling of Exceptional Conditions (*p.1531*)
- B CWE-924: Improper Enforcement of Message Integrity During Transmission in a Communication Channel (*p.1776*)

## Graph View: CWE-1026: Weaknesses in OWASP Top Ten (2017)

- C** CWE-1027: OWASP Top Ten 2017 Category A1 - Injection (p.2354)
  - G** CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.144)
  - B** CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
  - B** CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.193)
  - B** CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
  - B** CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.212)
  - B** CWE-91: XML Injection (aka Blind XPath Injection) (p.214)
  - V** CWE-564: SQL Injection: Hibernate (p.1257)
  - B** CWE-917: Improper Neutralization of Special Elements used in an Expression Language Statement ('Expression Language Injection') (p.1765)
  - G** CWE-943: Improper Neutralization of Special Elements in Data Query Logic (p.1796)
- C** CWE-1028: OWASP Top Ten 2017 Category A2 - Broken Authentication (p.2355)
  - G** CWE-287: Improper Authentication (p.681)
  - B** CWE-256: Plaintext Storage of a Password (p.605)
  - B** CWE-308: Use of Single-factor Authentication (p.739)
  - A** CWE-384: Session Fixation (p.919)
  - G** CWE-522: Insufficiently Protected Credentials (p.1201)
  - B** CWE-523: Unprotected Transport of Credentials (p.1206)
  - B** CWE-613: Insufficient Session Expiration (p.1345)
  - B** CWE-620: Unverified Password Change (p.1357)
  - B** CWE-640: Weak Password Recovery Mechanism for Forgotten Password (p.1383)
- C** CWE-1029: OWASP Top Ten 2017 Category A3 - Sensitive Data Exposure (p.2356)
  - V** CWE-220: Storage of File With Sensitive Data Under FTP Root (p.549)
  - B** CWE-295: Improper Certificate Validation (p.701)
  - G** CWE-311: Missing Encryption of Sensitive Data (p.744)
  - B** CWE-312: Cleartext Storage of Sensitive Information (p.751)
  - B** CWE-319: Cleartext Transmission of Sensitive Information (p.766)
  - C** CWE-320: Key Management Errors (p.2208)
  - B** CWE-325: Missing Cryptographic Step (p.781)
  - G** CWE-326: Inadequate Encryption Strength (p.783)
  - G** CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.785)
  - B** CWE-328: Use of Weak Hash (p.792)
  - B** CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.865)
- C** CWE-1030: OWASP Top Ten 2017 Category A4 - XML External Entities (XXE) (p.2356)
  - B** CWE-611: Improper Restriction of XML External Entity Reference (p.1341)
  - B** CWE-776: Improper Restriction of Recursive Entity References in DTDs ('XML Entity Expansion') (p.1585)
- C** CWE-1031: OWASP Top Ten 2017 Category A5 - Broken Access Control (p.2357)
  - B** CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - P** CWE-284: Improper Access Control (p.668)
  - G** CWE-285: Improper Authorization (p.673)
  - B** CWE-425: Direct Request ('Forced Browsing') (p.1005)
  - B** CWE-639: Authorization Bypass Through User-Controlled Key (p.1380)
- C** CWE-1032: OWASP Top Ten 2017 Category A6 - Security Misconfiguration (p.2357)
  - C** CWE-16: Configuration (p.2195)
  - B** CWE-209: Generation of Error Message Containing Sensitive Information (p.528)
  - V** CWE-548: Exposure of Information Through Directory Listing (p.1236)
- C** CWE-1033: OWASP Top Ten 2017 Category A7 - Cross-Site Scripting (XSS) (p.2358)
  - B** CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)

- C** CWE-1034: OWASP Top Ten 2017 Category A8 - Insecure Deserialization (p.2359)
  - B** CWE-502: Deserialization of Untrusted Data (p.1181)
- C** CWE-1035: OWASP Top Ten 2017 Category A9 - Using Components with Known Vulnerabilities (p.2359)
- C** CWE-1036: OWASP Top Ten 2017 Category A10 - Insufficient Logging & Monitoring (p.2360)
  - B** CWE-223: Omission of Security-relevant Information (p.552)
  - B** CWE-778: Insufficient Logging (p.1590)

## Graph View: CWE-1128: CISQ Quality Measures (2016)

- C** CWE-1129: CISQ Quality Measures (2016) - Reliability (p.2360)
  - B** CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.303)
  - B** CWE-252: Unchecked Return Value (p.596)
  - B** CWE-396: Declaration of Catch for Generic Exception (p.941)
  - B** CWE-397: Declaration of Throws for Generic Exception (p.943)
  - V** CWE-456: Missing Initialization of a Variable (p.1067)
  - G** CWE-674: Uncontrolled Recursion (p.1449)
  - G** CWE-704: Incorrect Type Conversion or Cast (p.1495)
  - B** CWE-772: Missing Release of Resource after Effective Lifetime (p.1576)
  - B** CWE-788: Access of Memory Location After End of Buffer (p.1621)
  - B** CWE-1045: Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor (p.1823)
  - B** CWE-1047: Modules with Circular Dependencies (p.1825)
  - B** CWE-1051: Initialization with Hard-Coded Network Resource Configuration Data (p.1830)
  - B** CWE-1056: Invokable Control Element with Variadic Parameters (p.1835)
  - B** CWE-1058: Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element (p.1837)
  - B** CWE-1062: Parent Class with References to Child Class (p.1842)
  - B** CWE-1065: Runtime Resource Management Control Element in a Component Built to Run on Application Servers (p.1845)
  - B** CWE-1066: Missing Serialization Control Element (p.1846)
  - V** CWE-1069: Empty Exception Block (p.1849)
  - B** CWE-1070: Serializable Data Element Containing non-Serializable Item Elements (p.1851)
  - V** CWE-1077: Floating Point Comparison with Incorrect Operator (p.1858)
  - B** CWE-1079: Parent Class without Virtual Destructor Method (p.1860)
  - B** CWE-1082: Class Instance Self Destruction Control Element (p.1862)
  - B** CWE-1083: Data Access from Outside Expected Data Manager Component (p.1863)
  - B** CWE-1087: Class with Virtual Method without a Virtual Destructor (p.1867)
  - B** CWE-1088: Synchronous Access of Remote Resource without Timeout (p.1868)
  - B** CWE-1097: Persistent Storable Data Element without Associated Comparison Control Element (p.1878)
  - V** CWE-1096: Singleton Class Instance Creation without Proper Locking or Synchronization (p.1876)
  - B** CWE-1098: Data Element containing Pointer Item without Proper Copy Control Element (p.1879)
- C** CWE-1130: CISQ Quality Measures (2016) - Maintainability (p.2362)
  - B** CWE-561: Dead Code (p.1250)
  - B** CWE-1041: Use of Redundant Code (p.1818)
  - B** CWE-1044: Architecture with Number of Horizontal Layers Outside of Expected Range (p.1822)
  - B** CWE-1047: Modules with Circular Dependencies (p.1825)
  - B** CWE-1048: Invokable Control Element with Large Number of Outward Calls (p.1826)
  - B** CWE-1052: Excessive Use of Hard-Coded Literals in Initialization (p.1831)
  - B** CWE-1054: Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (p.1833)
  - B** CWE-1055: Multiple Inheritance from Concrete Classes (p.1834)
  - B** CWE-1064: Invokable Control Element with Signature Containing an Excessive Number of Parameters (p.1844)
  - B** CWE-1074: Class with Excessively Deep Inheritance (p.1855)
  - B** CWE-1075: Unconditional Control Flow Transfer outside of Switch Block (p.1856)
  - B** CWE-1080: Source Code File with Excessive Number of Lines of Code (p.1861)
  - B** CWE-766: Critical Data Element Declared Public (p.1559)
  - B** CWE-1084: Invokable Control Element with Excessive File or Data Access Operations (p.1864)
  - B** CWE-1085: Invokable Control Element with Excessive Volume of Commented-out Code (p.1865)
  - B** CWE-1086: Class with Excessive Number of Child Classes (p.1866)
  - B** CWE-1090: Method Containing Access of a Member Element from Another Class (p.1870)
  - B** CWE-1092: Use of Same Invokable Control Element in Multiple Architectural Layers (p.1872)

- B CWE-1095: Loop Condition Value Update within the Loop (p.1875)
- B CWE-1121: Excessive McCabe Cyclomatic Complexity (p.1901)
- C CWE-1131: CISQ Quality Measures (2016) - Security (p.2363)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
- B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
- B CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
- B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
- C CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.242)
- B CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.303)
- V CWE-129: Improper Validation of Array Index (p.339)
- B CWE-134: Use of Externally-Controlled Format String (p.362)
- B CWE-252: Unchecked Return Value (p.596)
- C CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.785)
- B CWE-396: Declaration of Catch for Generic Exception (p.941)
- B CWE-397: Declaration of Throws for Generic Exception (p.943)
- B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1028)
- V CWE-456: Missing Initialization of a Variable (p.1067)
- B CWE-606: Unchecked Input for Loop Condition (p.1332)
- C CWE-667: Improper Locking (p.1433)
- C CWE-672: Operation on a Resource after Expiration or Release (p.1444)
- B CWE-681: Incorrect Conversion between Numeric Types (p.1458)
- B CWE-772: Missing Release of Resource after Effective Lifetime (p.1576)
- V CWE-789: Memory Allocation with Excessive Size Value (p.1625)
- B CWE-798: Use of Hard-coded Credentials (p.1642)
- B CWE-835: Loop with Unreachable Exit Condition ('Infinite Loop') (p.1707)
- C CWE-1132: CISQ Quality Measures (2016) - Performance Efficiency (p.2364)
- V CWE-1042: Static Member Data Element outside of a Singleton Class Element (p.1820)
- B CWE-1043: Data Element Aggregating an Excessively Large Number of Non-Primitive Elements (p.1821)
- B CWE-1046: Creation of Immutable Text Using String Concatenation (p.1824)
- B CWE-1049: Excessive Data Query Operations in a Large Data Table (p.1827)
- B CWE-1050: Excessive Platform Resource Consumption within a Loop (p.1829)
- B CWE-1057: Data Access Operations Outside of Expected Data Manager Component (p.1836)
- B CWE-1060: Excessive Number of Inefficient Server-Side Data Accesses (p.1840)
- B CWE-1063: Creation of Class Instance within a Static Code Block (p.1843)
- B CWE-1067: Excessive Execution of Sequential Searches of Data Resource (p.1847)
- B CWE-1072: Data Resource Access without Use of Connection Pooling (p.1853)
- B CWE-1073: Non-SQL Invokable Control Element with Excessive Number of Data Resource Accesses (p.1854)
- B CWE-1089: Large Data Table with Excessive Number of Indices (p.1869)
- B CWE-1091: Use of Object without Invoking Destructor Method (p.1871)
- B CWE-1094: Excessive Index Range Scan for a Data Resource (p.1874)

## Graph View: CWE-1133: Weaknesses Addressed by the SEI CERT Oracle Coding Standard for Java

- C** CWE-1134: SEI CERT Oracle Secure Coding Standard for Java - Guidelines 00. Input Validation and Data Sanitization (IDS) (p.2365)
  - G** CWE-116: Improper Encoding or Escaping of Output (p.280)
  - V** CWE-180: Incorrect Behavior Order: Validate Before Canonicalize (p.448)
  - B** CWE-289: Authentication Bypass by Alternate Name (p.690)

  - V** CWE-597: Use of Wrong Operator in String Comparison (p.1311)
- C** CWE-1182: SEI CERT Perl Coding Standard - Guidelines 04. Integers (INT) (p.2393)
  - C** CWE-189: Numeric Errors (p.2199)
- C** CWE-1183: SEI CERT Perl Coding Standard - Guidelines 05. Strings (STR) (p.2394)
- C** CWE-1184: SEI CERT Perl Coding Standard - Guidelines 06. Object-Oriented Programming (OOP) (p.2395)
  - B** CWE-767: Access to Critical Private Variable via Public Method (p.1562)
- C** CWE-1185: SEI CERT Perl Coding Standard - Guidelines 07. File Input and Output (FIO) (p.2395)
  - B** CWE-59: Improper Link Resolution Before File Access ('Link Following') (p.111)
- C** CWE-1186: SEI CERT Perl Coding Standard - Guidelines 50. Miscellaneous (MSC) (p.2396)
  - B** CWE-561: Dead Code (p.1250)
  - B** CWE-563: Assignment to Variable without Use (p.1255)

## Graph View: CWE-1194: Hardware Design

- C** CWE-1195: Manufacturing and Life Cycle Management Concerns (p.2396)
  - G** CWE-1059: Insufficient Technical Documentation (p.1838)
  - B** CWE-1248: Semiconductor Defects in Hardware Logic with Security-Sensitive Implications (p.1976)
  - B** CWE-1266: Improper Scrubbing of Sensitive Data from Decommissioned Device (p.2017)
  - B** CWE-1269: Product Released in Non-Release Configuration (p.2024)
  - B** CWE-1273: Device Unlock Credential Sharing (p.2032)
  - B** CWE-1297: Unprotected Confidential Information on Device is Accessible by OSAT Vendors (p.2080)
- C** CWE-1196: Security Flow Issues (p.2397)
  - B** CWE-1190: DMA Device Enabled Too Early in Boot Phase (p.1916)
  - B** CWE-1193: Power-On of Untrusted Execution Core Before Enabling Fabric Access Control (p.1922)
  - B** CWE-1264: Hardware Logic with Insecure De-Synchronization between Control and Data Channels (p.2012)
  - B** CWE-1274: Improper Access Control for Volatile Memory Containing Boot Code (p.2034)
  - B** CWE-1283: Mutable Attestation or Measurement Reporting Data (p.2052)
  - B** CWE-1310: Missing Ability to Patch ROM Code (p.2099)
  - B** CWE-1326: Missing Immutable Root of Trust in Hardware (p.2129)
  - B** CWE-1328: Security Version Number Mutable to Older Versions (p.2133)
- C** CWE-1197: Integration Issues (p.2398)
  - B** CWE-1276: Hardware Child Block Incorrectly Connected to Parent System (p.2039)
- C** CWE-1198: Privilege Separation and Access Control Issues (p.2398)
  - B** CWE-276: Incorrect Default Permissions (p.654)
  - G** CWE-441: Unintended Proxy or Intermediary ('Confused Deputy') (p.1042)
  - B** CWE-1189: Improper Isolation of Shared Resources on System-on-a-Chip (SoC) (p.1914)
  - B** CWE-1192: System-on-Chip (SoC) Using Components without Unique, Immutable Identifiers (p.1920)
  - B** CWE-1220: Insufficient Granularity of Access Control (p.1928)
  - V** CWE-1222: Insufficient Granularity of Address Regions Protected by Register Locks (p.1933)
  - B** CWE-1242: Inclusion of Undocumented Features or Chicken Bits (p.1962)
  - B** CWE-1260: Improper Handling of Overlap Between Protected Memory Ranges (p.2003)
  - B** CWE-1262: Improper Access Control for Register Interface (p.2008)
  - B** CWE-1267: Policy Uses Obsolete Encoding (p.2019)
  - B** CWE-1268: Policy Privileges are not Assigned Consistently Between Control and Data Agents (p.2021)
  - B** CWE-1280: Access Control Check Implemented After Asset is Accessed (p.2047)
  - G** CWE-1294: Insecure Security Identifier Mechanism (p.2074)
    - B** CWE-1259: Improper Restriction of Security Token Assignment (p.2000)
    - B** CWE-1270: Generation of Incorrect Security Tokens (p.2026)
    - B** CWE-1290: Incorrect Decoding of Security Identifiers (p.2066)
    - B** CWE-1292: Incorrect Conversion of Security Identifiers (p.2071)
  - B** CWE-1299: Missing Protection Mechanism for Alternate Hardware Interface (p.2084)
  - B** CWE-1302: Missing Security Identifier (p.2093)
  - B** CWE-1303: Non-Transparent Sharing of Microarchitectural Resources (p.2094)
  - B** CWE-1314: Missing Write Protection for Parametric Data Values (p.2106)
  - B** CWE-1318: Missing Support for Security Features in On-chip Fabrics or Buses (p.2115)
  - B** CWE-1334: Unauthorized Error Injection Can Degrade Hardware Redundancy (p.2149)
- C** CWE-1199: General Circuit and Logic Design Concerns (p.2399)
  - B** CWE-1209: Failure to Disable Reserved Bits (p.1926)
  - B** CWE-1221: Incorrect Register Defaults or Module Parameters (p.1930)
  - B** CWE-1223: Race Condition for Write-Once Attributes (p.1935)
  - B** CWE-1224: Improper Restriction of Write-Once Bit Fields (p.1937)
  - B** CWE-1231: Improper Prevention of Lock Bit Modification (p.1941)
  - B** CWE-1232: Improper Lock Behavior After Power State Transition (p.1943)
  - B** CWE-1233: Security-Sensitive Hardware Controls with Missing Lock Bit Protection (p.1945)
  - B** CWE-1234: Hardware Internal or Debug Modes Allow Override of Locks (p.1947)

- B CWE-1245: Improper Finite State Machines (FSMs) in Hardware Logic (p.1968)
- B CWE-1250: Improper Preservation of Consistency Between Independent Representations of Shared State (p.1980)
- B CWE-1253: Incorrect Selection of Fuse Values (p.1986)
- B CWE-1254: Incorrect Comparison Logic Granularity (p.1987)
- B CWE-1261: Improper Handling of Single Event Upsets (p.2006)
- B CWE-1298: Hardware Logic Contains Race Conditions (p.2082)
- C CWE-1201: Core and Compute Issues (p.2400)
  - B CWE-1252: CPU Hardware Not Configured to Support Exclusivity of Write and Execute Operations (p.1984)
  - B CWE-1281: Sequence of Processor Instructions Leads to Unexpected Behavior (p.2049)
  - B CWE-1342: Information Exposure through Microarchitectural State after Transient Execution (p.2165)
- C CWE-1202: Memory and Storage Issues (p.2400)
  - B CWE-226: Sensitive Information in Resource Not Removed Before Reuse (p.555)
    - V CWE-1239: Improper Zeroization of Hardware Register (p.1954)
    - B CWE-1342: Information Exposure through Microarchitectural State after Transient Execution (p.2165)
  - B CWE-1246: Improper Write Handling in Limited-write Non-Volatile Memories (p.1970)
  - B CWE-1251: Mirrored Regions with Different Values (p.1981)
  - B CWE-1257: Improper Access Control Applied to Mirrored or Aliased Memory Regions (p.1996)
  - B CWE-1282: Assumed-Immutable Data is Stored in Writable Memory (p.2051)
- C CWE-1203: Peripherals, On-chip Fabric, and Interface/IO Problems (p.2401)
  - B CWE-1311: Improper Translation of Security Attributes by Fabric Bridge (p.2101)
  - B CWE-1312: Missing Protection for Mirrored Regions in On-Chip Fabric Firewall (p.2103)
  - B CWE-1315: Improper Setting of Bus Controlling Capability in Fabric End-point (p.2109)
  - B CWE-1316: Fabric-Address Map Allows Programming of Unwarranted Overlaps of Protected and Unprotected Ranges (p.2111)
  - B CWE-1317: Improper Access Control in Fabric Bridge (p.2113)
  - B CWE-1331: Improper Isolation of Shared Resources in Network On Chip (NoC) (p.2140)
- C CWE-1205: Security Primitives and Cryptography Issues (p.2402)
  - B CWE-203: Observable Discrepancy (p.514)
    - B CWE-1300: Improper Protection of Physical Side Channels (p.2087)
  - B CWE-325: Missing Cryptographic Step (p.781)
  - B CWE-1240: Use of a Cryptographic Primitive with a Risky Implementation (p.1955)
  - B CWE-1241: Use of Predictable Algorithm in Random Number Generator (p.1961)
  - B CWE-1279: Cryptographic Operations are run Before Supporting Units are Ready (p.2045)
  - B CWE-1351: Improper Handling of Hardware Behavior in Exceptionally Cold Environments (p.2168)
- C CWE-1206: Power, Clock, Thermal, and Reset Concerns (p.2402)
  - B CWE-1232: Improper Lock Behavior After Power State Transition (p.1943)
  - B CWE-1247: Improper Protection Against Voltage and Clock Glitches (p.1972)
  - B CWE-1248: Semiconductor Defects in Hardware Logic with Security-Sensitive Implications (p.1976)
  - V CWE-1255: Comparison Logic is Vulnerable to Power Side-Channel Attacks (p.1989)
  - B CWE-1256: Improper Restriction of Software Interfaces to Hardware Features (p.1993)
  - B CWE-1271: Uninitialized Value on Reset for Registers Holding Security Settings (p.2028)
  - B CWE-1304: Improperly Preserved Integrity of Hardware Configuration State During a Power Save/Restore Operation (p.2096)
  - B CWE-1314: Missing Write Protection for Parametric Data Values (p.2106)
  - B CWE-1320: Improper Protection for Outbound Error Messages and Alert Signals (p.2120)
  - B CWE-1332: Improper Handling of Faults that Lead to Instruction Skips (p.2143)
  - B CWE-1338: Improper Protections Against Hardware Overheating (p.2155)
- C CWE-1207: Debug and Test Problems (p.2403)
  - B CWE-1191: On-Chip Debug and Test Interface With Improper Access Control (p.1917)
  - B CWE-1234: Hardware Internal or Debug Modes Allow Override of Locks (p.1947)
  - B CWE-1243: Sensitive Non-Volatile Information Not Protected During Debug (p.1964)
  - B CWE-1244: Internal Asset Exposed to Unsafe Debug Access Level or State (p.1966)
  - B CWE-1258: Exposure of Sensitive System Information Due to Uncleared Debug Information (p.1999)

- B CWE-1272: Sensitive Information Uncleared Before Debug/Power State Transition (p.2030)
- B CWE-1291: Public Key Re-Use for Signing both Debug and Production Code (p.2069)
- B CWE-1295: Debug Messages Revealing Unnecessary Information (p.2076)
- B CWE-1296: Incorrect Chaining or Granularity of Debug Components (p.2077)
- B CWE-1313: Hardware Allows Activation of Test or Debug Logic at Runtime (p.2105)
- B CWE-1323: Improper Management of Sensitive Trace Data (p.2126)
- B CWE-319: Cleartext Transmission of Sensitive Information (p.766)
- C CWE-1208: Cross-Cutting Problems (p.2404)
  - B CWE-440: Expected Behavior Violation (p.1041)
  - B CWE-1053: Missing Documentation for Design (p.1832)
  - G CWE-1059: Insufficient Technical Documentation (p.1838)
  - G CWE-1263: Improper Physical Access Control (p.2011)
  - B CWE-1277: Firmware Not Updateable (p.2041)
  - B CWE-1301: Insufficient or Incomplete Data Removal within Hardware Component (p.2091)
  - V CWE-1330: Remanent Data Readable after Memory Erase (p.2138)
  - B CWE-1329: Reliance on Component That is Not Updateable (p.2135)
  - G CWE-1357: Reliance on Insufficiently Trustworthy Component (p.2169)
- C CWE-1388: Physical Access Issues and Concerns (p.2454)
  - G CWE-1384: Improper Handling of Physical or Environmental Conditions (p.2172)
  - B CWE-1319: Improper Protection against Electromagnetic Fault Injection (EM-FI) (p.2117)
  - B CWE-1247: Improper Protection Against Voltage and Clock Glitches (p.1972)
  - B CWE-1261: Improper Handling of Single Event Upsets (p.2006)
  - B CWE-1332: Improper Handling of Faults that Lead to Instruction Skips (p.2143)
  - B CWE-1351: Improper Handling of Hardware Behavior in Exceptionally Cold Environments (p.2168)
  - B CWE-1278: Missing Protection Against Hardware Reverse Engineering Using Integrated Circuit (IC) Imaging Techniques (p.2043)
  - V CWE-1255: Comparison Logic is Vulnerable to Power Side-Channel Attacks (p.1989)
  - B CWE-1300: Improper Protection of Physical Side Channels (p.2087)
  - B CWE-1248: Semiconductor Defects in Hardware Logic with Security-Sensitive Implications (p.1976)

## Graph View: CWE-1200: Weaknesses in the 2019 CWE Top 25 Most Dangerous Software Errors

-  CWE-119: Improper Restriction of Operations within the Bounds of a Memory Buffer (p.291)
-  CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
-  CWE-20: Improper Input Validation (p.20)
-  CWE-200: Exposure of Sensitive Information to an Unauthorized Actor (p.501)
-  CWE-125: Out-of-bounds Read (p.327)
-  CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
-  CWE-416: Use After Free (p.993)
-  CWE-190: Integer Overflow or Wraparound (p.468)
-  CWE-352: Cross-Site Request Forgery (CSRF) (p.851)
-  CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
-  CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
-  CWE-787: Out-of-bounds Write (p.1613)
-  CWE-287: Improper Authentication (p.681)
-  CWE-476: NULL Pointer Dereference (p.1110)
-  CWE-732: Incorrect Permission Assignment for Critical Resource (p.1506)
-  CWE-434: Unrestricted Upload of File with Dangerous Type (p.1028)
-  CWE-611: Improper Restriction of XML External Entity Reference (p.1341)
-  CWE-94: Improper Control of Generation of Code ('Code Injection') (p.219)
-  CWE-798: Use of Hard-coded Credentials (p.1642)
-  CWE-400: Uncontrolled Resource Consumption (p.946)
-  CWE-772: Missing Release of Resource after Effective Lifetime (p.1576)
-  CWE-426: Untrusted Search Path (p.1008)
-  CWE-502: Deserialization of Untrusted Data (p.1181)
-  CWE-269: Improper Privilege Management (p.636)
-  CWE-295: Improper Certificate Validation (p.701)

- V CWE-196: Unsigned to Signed Conversion Error (p.494)
- B CWE-197: Numeric Truncation Error (p.496)
- P| CWE-682: Incorrect Calculation (p.1462)
- B CWE-131: Incorrect Calculation of Buffer Size (p.352)
- B CWE-369: Divide By Zero (p.896)
- P| CWE-703: Improper Check or Handling of Exceptional Conditions (p.1493)
- B CWE-248: Uncaught Exception (p.587)
- B CWE-391: Unchecked Error Condition (p.930)
- B CWE-392: Missing Report of Error Condition (p.933)
- C CWE-704: Incorrect Type Conversion or Cast (p.1495)
- C CWE-758: Reliance on Undefined, Unspecified, or Implementation-Defined Behavior (p.1535)
- B CWE-835: Loop with Unreachable Exit Condition ('Infinite Loop') (p.1707)
- B CWE-908: Use of Uninitialized Resource (p.1742)
- B CWE-1045: Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor (p.1823)
- B CWE-1051: Initialization with Hard-Coded Network Resource Configuration Data (p.1830)
- B CWE-1066: Missing Serialization Control Element (p.1846)
- B CWE-1070: Serializable Data Element Containing non-Serializable Item Elements (p.1851)
- V CWE-1077: Floating Point Comparison with Incorrect Operator (p.1858)
- B CWE-1079: Parent Class without Virtual Destructor Method (p.1860)
- B CWE-1082: Class Instance Self Destruction Control Element (p.1862)
- B CWE-1083: Data Access from Outside Expected Data Manager Component (p.1863)
- B CWE-1087: Class with Virtual Method without a Virtual Destructor (p.1867)
- B CWE-1088: Synchronous Access of Remote Resource without Timeout (p.1868)
- B CWE-1098: Data Element containing Pointer Item without Proper Copy Control Element (p.1879)
- C CWE-1307: CISQ Quality Measures - Maintainability (p.2416)
- C CWE-407: Inefficient Algorithmic Complexity (p.974)
- B CWE-478: Missing Default Case in Multiple Condition Expression (p.1119)
- B CWE-480: Use of Incorrect Operator (p.1127)
- B CWE-484: Omitted Break Statement in Switch (p.1138)
- B CWE-561: Dead Code (p.1250)
- B CWE-570: Expression is Always False (p.1266)
- B CWE-571: Expression is Always True (p.1269)
- B CWE-783: Operator Precedence Logic Error (p.1602)
- B CWE-1041: Use of Redundant Code (p.1818)
- B CWE-1045: Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor (p.1823)
- B CWE-1047: Modules with Circular Dependencies (p.1825)
- B CWE-1048: Invokable Control Element with Large Number of Outward Calls (p.1826)
- B CWE-1051: Initialization with Hard-Coded Network Resource Configuration Data (p.1830)
- B CWE-1052: Excessive Use of Hard-Coded Literals in Initialization (p.1831)
- B CWE-1054: Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (p.1833)
- B CWE-1055: Multiple Inheritance from Concrete Classes (p.1834)
- B CWE-1062: Parent Class with References to Child Class (p.1842)
- B CWE-1064: Invokable Control Element with Signature Containing an Excessive Number of Parameters (p.1844)
- B CWE-1074: Class with Excessively Deep Inheritance (p.1855)
- B CWE-1075: Unconditional Control Flow Transfer outside of Switch Block (p.1856)
- B CWE-1079: Parent Class without Virtual Destructor Method (p.1860)
- B CWE-1080: Source Code File with Excessive Number of Lines of Code (p.1861)
- B CWE-1084: Invokable Control Element with Excessive File or Data Access Operations (p.1864)
- B CWE-1085: Invokable Control Element with Excessive Volume of Commented-out Code (p.1865)
- B CWE-1086: Class with Excessive Number of Child Classes (p.1866)
- B CWE-1087: Class with Virtual Method without a Virtual Destructor (p.1867)
- B CWE-1090: Method Containing Access of a Member Element from Another Class (p.1870)

- B CWE-1095: Loop Condition Value Update within the Loop (p.1875)
- C CWE-1308: CISQ Quality Measures - Security (p.2417)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - B CWE-23: Relative Path Traversal (p.46)
  - B CWE-36: Absolute Path Traversal (p.74)
- G CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.144)
  - B CWE-624: Executable Regular Expression Error (p.1364)
  - B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
  - B CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.193)
  - B CWE-917: Improper Neutralization of Special Elements used in an Expression Language Statement ('Expression Language Injection') (p.1765)
- B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
  - V CWE-564: SQL Injection: Hibernate (p.1257)
- B CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.212)
- B CWE-91: XML Injection (aka Blind XPath Injection) (p.214)
- G CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.242)
- C CWE-119: Improper Restriction of Operations within the Bounds of a Memory Buffer (p.291)
  - B CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.303)
  - B CWE-123: Write-what-where Condition (p.321)
  - B CWE-125: Out-of-bounds Read (p.327)
  - B CWE-130: Improper Handling of Length Parameter Inconsistency (p.348)
  - B CWE-786: Access of Memory Location Before Start of Buffer (p.1610)
  - B CWE-787: Out-of-bounds Write (p.1613)
  - B CWE-788: Access of Memory Location After End of Buffer (p.1621)
  - B CWE-805: Buffer Access with Incorrect Length Value (p.1654)
  - B CWE-822: Untrusted Pointer Dereference (p.1674)
  - B CWE-823: Use of Out-of-range Pointer Offset (p.1677)
  - B CWE-824: Access of Uninitialized Pointer (p.1680)
  - B CWE-825: Expired Pointer Dereference (p.1682)
- V CWE-129: Improper Validation of Array Index (p.339)
- B CWE-134: Use of Externally-Controlled Format String (p.362)
- B CWE-252: Unchecked Return Value (p.596)
- G CWE-404: Improper Resource Shutdown or Release (p.961)
  - V CWE-401: Missing Release of Memory after Effective Lifetime (p.955)
  - B CWE-772: Missing Release of Resource after Effective Lifetime (p.1576)
  - V CWE-775: Missing Release of File Descriptor or Handle after Effective Lifetime (p.1584)
- G CWE-424: Improper Protection of Alternate Path (p.1004)
- B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1028)
- B CWE-477: Use of Obsolete Function (p.1116)
- B CWE-480: Use of Incorrect Operator (p.1127)
- B CWE-502: Deserialization of Untrusted Data (p.1181)
- B CWE-570: Expression is Always False (p.1266)
- B CWE-571: Expression is Always True (p.1269)
- B CWE-606: Unchecked Input for Loop Condition (p.1332)
- B CWE-611: Improper Restriction of XML External Entity Reference (p.1341)
- B CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1393)
- B CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1408)
- G CWE-662: Improper Synchronization (p.1420)
  - B CWE-1058: Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element (p.1837)

- V CWE-1096: Singleton Class Instance Creation without Proper Locking or Synchronization (p.1876)
- B CWE-366: Race Condition within a Thread (p.886)
- V CWE-543: Use of Singleton Pattern Without Synchronization in a Multithreaded Context (p.1230)
- B CWE-567: Unsynchronized Access to Shared Data in a Multithreaded Context (p.1262)
- G CWE-667: Improper Locking (p.1433)
- B CWE-764: Multiple Locks of a Critical Resource (p.1556)
- B CWE-820: Missing Synchronization (p.1671)
- B CWE-821: Incorrect Synchronization (p.1673)
- B CWE-833: Deadlock (p.1704)
- G CWE-665: Improper Initialization (p.1426)
- V CWE-456: Missing Initialization of a Variable (p.1067)
- V CWE-457: Use of Uninitialized Variable (p.1072)
- G CWE-672: Operation on a Resource after Expiration or Release (p.1444)
- V CWE-415: Double Free (p.989)
- V CWE-416: Use After Free (p.993)
- B CWE-681: Incorrect Conversion between Numeric Types (p.1458)
- V CWE-194: Unexpected Sign Extension (p.487)
- V CWE-195: Signed to Unsigned Conversion Error (p.490)
- V CWE-196: Unsigned to Signed Conversion Error (p.494)
- B CWE-197: Numeric Truncation Error (p.496)
- P| CWE-682: Incorrect Calculation (p.1462)
- B CWE-131: Incorrect Calculation of Buffer Size (p.352)

- ⓑ CWE-1276: Hardware Child Block Incorrectly Connected to Parent System (p.2039)
- ⓑ CWE-1283: Mutable Attestation or Measurement Reporting Data (p.2052)
- ⓑ CWE-1290: Incorrect Decoding of Security Identifiers (p.2066)
- ⓑ CWE-1292: Incorrect Conversion of Security Identifiers (p.2071)
- ⓐ CWE-1294: Insecure Security Identifier Mechanism (p.2074)
- ⓑ CWE-1296: Incorrect Chaining or Granularity of Debug Components (p.2077)
- ⓑ CWE-1297: Unprotected Confidential Information on Device is Accessible by OSAT Vendors (p.2080)
- ⓑ CWE-1299: Missing Protection Mechanism for Alternate Hardware Interface (p.2084)
- ⓑ CWE-1302: Missing Security Identifier (p.2093)
- ⓑ CWE-1304: Improperly Preserved Integrity of Hardware Configuration State During a Power Save/Restore Operation (p.2096)
- ⓑ CWE-1311: Improper Translation of Security Attributes by Fabric Bridge (p.2101)
- ⓑ CWE-1312: Missing Protection for Mirrored Regions in On-Chip Fabric Firewall (p.2103)
- ⓑ CWE-1313: Hardware Allows Activation of Test or Debug Logic at Runtime (p.2105)
- ⓑ CWE-1314: Missing Write Protection for Parametric Data Values (p.2106)
- ⓑ CWE-1315: Improper Setting of Bus Controlling Capability in Fabric End-point (p.2109)
- ⓑ CWE-1316: Fabric-Address Map Allows Programming of Unwarranted Overlaps of Protected and Unprotected Ranges (p.2111)
- ⓑ CWE-1317: Improper Access Control in Fabric Bridge (p.2113)
- ⓑ CWE-1320: Improper Protection for Outbound Error Messages and Alert Signals (p.2120)
- ⓑ CWE-1323: Improper Management of Sensitive Trace Data (p.2126)
- ⓑ CWE-1328: Security Version Number Mutable to Older Versions (p.2133)
- ⓑ CWE-1334: Unauthorized Error Injection Can Degrade Hardware Redundancy (p.2149)
- ⓐ CWE-1390: Weak Authentication (p.2181)

- CWE-1391: Use of Weak Credentials (p.2183)
- CWE-1392: Use of Default Credentials (p.2186)
- CWE-1393: Use of Default Password (p.2187)
- CWE-1394: Use of Default Cryptographic Key (p.2189)
- CWE-1397: Comprehensive Categorization: Comparison (p.2459)
  - CWE-183: Permissive List of Allowed Inputs (p.454)
  - CWE-185: Incorrect Regular Expression (p.459)
  - CWE-186: Overly Restrictive Regular Expression (p.463)
  - CWE-187: Partial String Comparison (p.464)
  - CWE-478: Missing Default Case in Multiple Condition Expression (p.1119)
  - CWE-486: Comparison of Classes by Name (p.1141)
  - CWE-595: Comparison of Object References Instead of Object Contents (p.1309)
  - CWE-597: Use of Wrong Operator in String Comparison (p.1311)
  - CWE-625: Permissive Regular Expression (p.1365)
  - |P| CWE-697: Incorrect Comparison (p.1487)
  - CWE-777: Regular Expression without Anchors (p.1588)
  - CWE-839: Numeric Range Comparison Without Minimum Check (p.1717)
  - CWE-1023: Incomplete Comparison with Missing Factors (p.1809)
  - CWE-1024: Comparison of Incompatible Types (p.1811)
  - CWE-1025: Comparison Using Wrong Factors (p.1812)
  - CWE-1077: Floating Point Comparison with Incorrect Operator (p.1858)
- CWE-1398: Comprehensive Categorization: Component Interaction (p.2460)
  - CWE-14: Compiler Removal of Code to Clear Buffers (p.14)
  - CWE-115: Misinterpretation of Input (p.279)
  - |P| CWE-435: Improper Interaction Between Multiple Correctly-Behaving Entities (p.1035)
  - CWE-436: Interpretation Conflict (p.1037)
  - CWE-437: Incomplete Model of Endpoint Features (p.1039)
  - CWE-439: Behavioral Change in New Version or Environment (p.1040)
  - CWE-444: Inconsistent Interpretation of HTTP Requests ('HTTP Request/Response Smuggling') (p.1046)
  - CWE-650: Trusting HTTP Permission Methods on the Server Side (p.1405)
  - CWE-733: Compiler Optimization Removal or Modification of Security-critical Code (p.1516)
  - CWE-1037: Processor Optimization Removal or Modification of Security-critical Code (p.1813)
  - CWE-1038: Insecure Automated Optimizations (p.1815)
- CWE-1401: Comprehensive Categorization: Concurrency (p.2462)
  - CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition') (p.871)
  - CWE-363: Race Condition Enabling Link Following (p.880)
  - CWE-364: Signal Handler Race Condition (p.881)
  - CWE-366: Race Condition within a Thread (p.886)
  - CWE-367: Time-of-check Time-of-use (TOCTOU) Race Condition (p.889)
  - CWE-368: Context Switching Race Condition (p.894)
  - CWE-412: Unrestricted Externally Accessible Lock (p.982)
  - CWE-413: Improper Resource Locking (p.984)
  - CWE-414: Missing Lock Check (p.988)
  - CWE-432: Dangerous Signal Handler not Disabled During Sensitive Operations (p.1025)
  - CWE-479: Signal Handler Use of a Non-reentrant Function (p.1125)
  - CWE-543: Use of Singleton Pattern Without Synchronization in a Multithreaded Context (p.1230)
  - CWE-558: Use of getlogin() in Multithreaded Application (p.1247)
  - CWE-567: Unsynchronized Access to Shared Data in a Multithreaded Context (p.1262)
  - CWE-572: Call to Thread run() instead of start() (p.1271)
  - CWE-574: EJB Bad Practices: Use of Synchronization Primitives (p.1274)
  - CWE-591: Sensitive Data Storage in Improperly Locked Memory (p.1304)
  - CWE-609: Double-Checked Locking (p.1337)

- B CWE-663: Use of a Non-reentrant Function in a Concurrent Context (p.1423)
- C CWE-667: Improper Locking (p.1433)
- B CWE-689: Permission Race Condition During Resource Copy (p.1475)
- B CWE-764: Multiple Locks of a Critical Resource (p.1556)
- B CWE-765: Multiple Unlocks of a Critical Resource (p.1558)
- B CWE-820: Missing Synchronization (p.1671)
- B CWE-821: Incorrect Synchronization (p.1673)
- V CWE-828: Signal Handler with Functionality that is not Asynchronous-Safe (p.1688)
- V CWE-831: Signal Handler Function Associated with Multiple Signals (p.1700)
- B CWE-832: Unlock of a Resource that is not Locked (p.1702)
- B CWE-833: Deadlock (p.1704)
- B CWE-1058: Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element (p.1837)
- B CWE-1088: Synchronous Access of Remote Resource without Timeout (p.1868)
- V CWE-1096: Singleton Class Instance Creation without Proper Locking or Synchronization (p.1876)
- B CWE-1223: Race Condition for Write-Once Attributes (p.1935)
- B CWE-1232: Improper Lock Behavior After Power State Transition (p.1943)
- B CWE-1234: Hardware Internal or Debug Modes Allow Override of Locks (p.1947)
- B CWE-1264: Hardware Logic with Insecure De-Synchronization between Control and Data Channels (p.2012)
- B CWE-1298: Hardware Logic Contains Race Conditions (p.2082)
- C CWE-1402: Comprehensive Categorization: Encryption (p.2463)
  - V CWE-5: J2EE Misconfiguration: Data Transmission Without Encryption (p.1)
  - C CWE-311: Missing Encryption of Sensitive Data (p.744)
  - B CWE-312: Cleartext Storage of Sensitive Information (p.751)
  - V CWE-313: Cleartext Storage in a File or on Disk (p.757)
  - V CWE-314: Cleartext Storage in the Registry (p.759)
  - V CWE-315: Cleartext Storage of Sensitive Information in a Cookie (p.761)
  - V CWE-316: Cleartext Storage of Sensitive Information in Memory (p.762)
  - V CWE-317: Cleartext Storage of Sensitive Information in GUI (p.764)
  - V CWE-318: Cleartext Storage of Sensitive Information in Executable (p.765)
  - B CWE-319: Cleartext Transmission of Sensitive Information (p.766)
  - B CWE-324: Use of a Key Past its Expiration Date (p.779)
  - B CWE-325: Missing Cryptographic Step (p.781)
  - C CWE-326: Inadequate Encryption Strength (p.783)
  - C CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.785)
  - B CWE-328: Use of Weak Hash (p.792)
  - B CWE-347: Improper Verification of Cryptographic Signature (p.840)
  - V CWE-614: Sensitive Cookie in HTTPS Session Without 'Secure' Attribute (p.1347)
  - V CWE-759: Use of a One-Way Hash without a Salt (p.1537)
  - V CWE-760: Use of a One-Way Hash with a Predictable Salt (p.1542)
  - V CWE-780: Use of RSA Algorithm without OAEP (p.1596)
  - B CWE-916: Use of Password Hash With Insufficient Computational Effort (p.1761)
  - B CWE-1240: Use of a Cryptographic Primitive with a Risky Implementation (p.1955)
- C CWE-1403: Comprehensive Categorization: Exposed Resource (p.2464)
  - V CWE-8: J2EE Misconfiguration: Entity Bean Declared Remote (p.6)
  - B CWE-15: External Control of System or Configuration Setting (p.17)
  - B CWE-73: External Control of File Name or Path (p.132)
  - C CWE-114: Process Control (p.275)
  - V CWE-219: Storage of File with Sensitive Data Under Web Root (p.547)
  - V CWE-220: Storage of File With Sensitive Data Under FTP Root (p.549)
  - B CWE-374: Passing Mutable Objects to an Untrusted Method (p.903)
  - B CWE-375: Returning a Mutable Object to an Untrusted Caller (p.906)
  - C CWE-377: Insecure Temporary File (p.908)

- B CWE-378: Creation of Temporary File With Insecure Permissions (p.911)
- B CWE-379: Creation of Temporary File in Directory with Insecure Permissions (p.913)
- C CWE-402: Transmission of Private Resources into a New Sphere ('Resource Leak') (p.958)
- B CWE-403: Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak') (p.959)
- B CWE-426: Untrusted Search Path (p.1008)
- B CWE-427: Uncontrolled Search Path Element (p.1013)
- B CWE-428: Unquoted Search Path or Element (p.1019)
- V CWE-433: Unparsed Raw Web Content Delivery (p.1026)
- B CWE-472: External Control of Assumed-Immutable Web Parameter (p.1101)
- B CWE-488: Exposure of Data Element to Wrong Session (p.1145)
- V CWE-491: Public cloneable() Method Without Final ('Object Hijack') (p.1150)
- V CWE-492: Use of Inner Class Containing Sensitive Data (p.1152)
- V CWE-493: Critical Public Variable Without Final Modifier (p.1159)
- V CWE-498: Cloneable Class Containing Sensitive Information (p.1173)
- V CWE-499: Serializable Class Containing Sensitive Data (p.1175)
- V CWE-500: Public Static Field Not Marked Final (p.1177)
- B CWE-524: Use of Cache Containing Sensitive Information (p.1208)
- V CWE-525: Use of Web Browser Cache Containing Sensitive Information (p.1209)
- V CWE-527: Exposure of Version-Control Repository to an Unauthorized Control Sphere (p.1212)
- V CWE-528: Exposure of Core Dump File to an Unauthorized Control Sphere (p.1213)
- V CWE-529: Exposure of Access Control List Files to an Unauthorized Control Sphere (p.1214)
- V CWE-530: Exposure of Backup File to an Unauthorized Control Sphere (p.1215)
- V CWE-539: Use of Persistent Cookies Containing Sensitive Information (p.1226)
- B CWE-552: Files or Directories Accessible to External Parties (p.1240)
- V CWE-553: Command Shell in Externally Accessible Directory (p.1244)
- B CWE-565: Reliance on Cookies without Validation and Integrity Checking (p.1258)
- V CWE-582: Array Declared Public, Final, and Static (p.1288)
- V CWE-583: finalize() Method Declared Public (p.1290)
- V CWE-608: Struts: Non-private Field in ActionForm Class (p.1336)
- B CWE-619: Dangling Database Cursor ('Cursor Injection') (p.1356)
- C CWE-642: External Control of Critical State Data (p.1387)
- C CWE-668: Exposure of Resource to Wrong Sphere (p.1438)
- B CWE-767: Access to Critical Private Variable via Public Method (p.1562)
- V CWE-784: Reliance on Cookies without Validation and Integrity Checking in a Security Decision (p.1605)
- B CWE-1282: Assumed-Immutable Data is Stored in Writable Memory (p.2051)
- B CWE-1327: Binding to an Unrestricted IP Address (p.2131)
- C CWE-1404: Comprehensive Categorization: File Handling (p.2466)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
- B CWE-23: Relative Path Traversal (p.46)
- V CWE-24: Path Traversal: './filedir' (p.53)
- V CWE-25: Path Traversal: '/../filedir' (p.54)
- V CWE-26: Path Traversal: '/dir../filename' (p.56)
- V CWE-27: Path Traversal: 'dir/../../filename' (p.57)

  - B CWE-468: Incorrect Pointer Scaling (p.1092)
  - B CWE-469: Use of Pointer Subtraction to Determine Size (p.1093)
  - P CWE-682: Incorrect Calculation (p.1462)
  - B CWE-1335: Incorrect Bitwise Shift of Integer (p.2151)
  - B CWE-1339: Insufficient Precision or Accuracy of a Real Number (p.2157)
- C CWE-1409: Comprehensive Categorization: Injection (p.2472)
  - C CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.136)
  - C CWE-75: Failure to Sanitize Special Elements into a Different Plane (Special Element Injection) (p.142)
  - B CWE-76: Improper Neutralization of Equivalent Special Elements (p.143)
  - C CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.144)
  - B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.151)
  - B CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.163)
  - V CWE-80: Improper Neutralization of Script-Related HTML Tags in a Web Page (Basic XSS) (p.176)
  - V CWE-81: Improper Neutralization of Script in an Error Message Web Page (p.179)
  - V CWE-82: Improper Neutralization of Script in Attributes of IMG Tags in a Web Page (p.181)

- V CWE-83: Improper Neutralization of Script in Attributes in a Web Page (p.183)
- V CWE-84: Improper Neutralization of Encoded URI Schemes in a Web Page (p.185)
- V CWE-85: Doubled Character XSS Manipulations (p.187)
- V CWE-86: Improper Neutralization of Invalid Characters in Identifiers in Web Pages (p.189)
- V CWE-87: Improper Neutralization of Alternate XSS Syntax (p.191)
- B CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.193)
- B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.200)
- B CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.212)
- B CWE-91: XML Injection (aka Blind XPath Injection) (p.214)
- B CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.217)
- B CWE-94: Improper Control of Generation of Code ('Code Injection') (p.219)
- V CWE-95: Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection') (p.225)
- B CWE-96: Improper Neutralization of Directives in Statically Saved Code ('Static Code Injection') (p.231)
- V CWE-97: Improper Neutralization of Server-Side Includes (SSI) Within a Web Page (p.234)
- G CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.242)
- V CWE-102: Struts: Duplicate Validation Forms (p.245)
- V CWE-113: Improper Neutralization of CRLF Sequences in HTTP Headers ('HTTP Request/Response Splitting') (p.270)
- V CWE-564: SQL Injection: Hibernate (p.1257)
- V CWE-621: Variable Extraction Error (p.1359)
- B CWE-624: Executable Regular Expression Error (p.1364)
- V CWE-627: Dynamic Variable Evaluation (p.1370)
- B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1385)
- B CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1393)
- B CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1408)
- G CWE-692: Incomplete Denylist to Cross-Site Scripting (p.1480)
- B CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1483)
- B CWE-914: Improper Control of Dynamically-Identified Variables (p.1755)
- B CWE-917: Improper Neutralization of Special Elements used in an Expression Language Statement ('Expression Language Injection') (p.1765)
- G CWE-943: Improper Neutralization of Special Elements in Data Query Logic (p.1796)
- B CWE-1236: Improper Neutralization of Formula Elements in a CSV File (p.1951)
- B CWE-1336: Improper Neutralization of Special Elements Used in a Template Engine (p.2153)
- C CWE-1410: Comprehensive Categorization: Insufficient Control Flow Management (p.2474)
- B CWE-179: Incorrect Behavior Order: Early Validation (p.445)
- V CWE-180: Incorrect Behavior Order: Validate Before Canonicalize (p.448)
- V CWE-181: Incorrect Behavior Order: Validate Before Filter (p.450)
- B CWE-248: Uncaught Exception (p.587)
- V CWE-382: J2EE Bad Practices: Use of System.exit() (p.915)
- B CWE-395: Use of NullPointerException Catch to Detect NULL Pointer Dereference (p.939)
- B CWE-396: Declaration of Catch for Generic Exception (p.941)
- B CWE-397: Declaration of Throws for Generic Exception (p.943)
- B CWE-408: Incorrect Behavior Order: Early Amplification (p.976)
- B CWE-430: Deployment of Wrong Handler (p.1022)
- B CWE-431: Missing Handler (p.1023)
- B CWE-455: Non-exit on Failed Initialization (p.1065)
- B CWE-480: Use of Incorrect Operator (p.1127)
- V CWE-481: Assigning instead of Comparing (p.1130)
- V CWE-482: Comparing instead of Assigning (p.1134)
- B CWE-483: Incorrect Block Delimitation (p.1136)
- B CWE-584: Return Inside Finally Block (p.1292)
- V CWE-600: Uncaught Exception in Servlet (p.1318)

- B CWE-617: Reachable Assertion (p.1352)
- C CWE-670: Always-Incorrect Control Flow Implementation (p.1442)
- C CWE-674: Uncontrolled Recursion (p.1449)
- P CWE-691: Insufficient Control Flow Management (p.1479)
- C CWE-696: Incorrect Behavior Order (p.1486)
- B CWE-698: Execution After Redirect (EAR) (p.1491)
- C CWE-705: Incorrect Control Flow Scoping (p.1497)
- V CWE-768: Incorrect Short Circuit Evaluation (p.1564)
- B CWE-783: Operator Precedence Logic Error (p.1602)
- C CWE-799: Improper Control of Interaction Frequency (p.1650)
- C CWE-834: Excessive Iteration (p.1705)
- B CWE-835: Loop with Unreachable Exit Condition ('Infinite Loop') (p.1707)
- B CWE-837: Improper Enforcement of a Single, Unique Action (p.1712)
- B CWE-841: Improper Enforcement of Behavioral Workflow (p.1721)
- B CWE-1190: DMA Device Enabled Too Early in Boot Phase (p.1916)
- B CWE-1193: Power-On of Untrusted Execution Core Before Enabling Fabric Access Control (p.1922)
- B CWE-1265: Unintended Reentrant Invocation of Non-reentrant Code Via Nested Calls (p.2014)
- B CWE-1280: Access Control Check Implemented After Asset is Accessed (p.2047)
- B CWE-1281: Sequence of Processor Instructions Leads to Unexpected Behavior (p.2049)
- B CWE-1322: Use of Blocking Code in Single-threaded, Non-blocking Context (p.2124)
- C CWE-1411: Comprehensive Categorization: Insufficient Verification of Data Authenticity (p.2475)
  - C CWE-345: Insufficient Verification of Data Authenticity (p.834)
  - C CWE-346: Origin Validation Error (p.837)
  - B CWE-348: Use of Less Trusted Source (p.842)
  - B CWE-349: Acceptance of Extraneous Untrusted Data With Trusted Data (p.844)
  - B CWE-351: Insufficient Type Distinction (p.849)
  - B CWE-352: Cross-Site Request Forgery (CSRF) (p.851)
  - B CWE-353: Missing Support for Integrity Check (p.857)
  - B CWE-354: Improper Validation of Integrity Check Value (p.859)
  - B CWE-360: Trust of System Event Data (p.870)
  - B CWE-494: Download of Code Without Integrity Check (p.1161)
  - V CWE-616: Incomplete Identification of Uploaded File Variables (PHP) (p.1350)
  - V CWE-646: Reliance on File Name or Extension of Externally-Supplied File (p.1398)
  - B CWE-649: Reliance on Obfuscation or Encryption of Security-Relevant Inputs without Integrity Checking (p.1403)
  - B CWE-924: Improper Enforcement of Message Integrity During Transmission in a Communication Channel (p.1776)
  - B CWE-1293: Missing Source Correlation of Multiple Independent Data (p.2073)
  - V CWE-1385: Missing Origin Validation in WebSockets (p.2173)
- C CWE-1399: Comprehensive Categorization: Memory Safety (p.2461)
  - C CWE-119: Improper Restriction of Operations within the Bounds of a Memory Buffer (p.291)
  - B CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.303)
  - V CWE-121: Stack-based Buffer Overflow (p.312)
  - V CWE-122: Heap-based Buffer Overflow (p.317)
  - B CWE-123: Write-what-where Condition (p.321)
  - B CWE-124: Buffer Underwrite ('Buffer Underflow') (p.324)
  - B CWE-125: Out-of-bounds Read (p.327)
  - V CWE-126: Buffer Over-read (p.332)
  - V CWE-127: Buffer Under-read (p.335)
  - V CWE-129: Improper Validation of Array Index (p.339)
  - B CWE-131: Incorrect Calculation of Buffer Size (p.352)
  - B CWE-134: Use of Externally-Controlled Format String (p.362)
  - B CWE-188: Reliance on Data/Memory Layout (p.466)
  - V CWE-198: Use of Incorrect Byte Ordering (p.500)

- V CWE-244: Improper Clearing of Heap Memory Before Release ('Heap Inspection') (p.581)
- V CWE-401: Missing Release of Memory after Effective Lifetime (p.955)
- V CWE-415: Double Free (p.989)
- V CWE-416: Use After Free (p.993)
- B CWE-466: Return of Pointer Value Outside of Expected Range (p.1087)
- B CWE-562: Return of Stack Variable Address (p.1253)
- V CWE-587: Assignment of a Fixed Address to a Pointer (p.1296)
- V CWE-590: Free of Memory not on the Heap (p.1301)
- B CWE-680: Integer Overflow to Buffer Overflow (p.1457)
- B CWE-690: Unchecked Return Value to NULL Pointer Dereference (p.1477)
- V CWE-761: Free of Pointer not at Start of Buffer (p.1545)
- V CWE-762: Mismatched Memory Management Routines (p.1548)
- B CWE-763: Release of Invalid Pointer or Reference (p.1552)
- B CWE-786: Access of Memory Location Before Start of Buffer (p.1610)
- B CWE-787: Out-of-bounds Write (p.1613)
- B CWE-788: Access of Memory Location After End of Buffer (p.1621)
- V CWE-789: Memory Allocation with Excessive Size Value (p.1625)
- B CWE-805: Buffer Access with Incorrect Length Value (p.1654)
- V CWE-806: Buffer Access Using Size of Source Buffer (p.1661)
- B CWE-822: Untrusted Pointer Dereference (p.1674)
- B CWE-823: Use of Out-of-range Pointer Offset (p.1677)
- B CWE-824: Access of Uninitialized Pointer (p.1680)
- B CWE-825: Expired Pointer Dereference (p.1682)
- C CWE-1412: Comprehensive Categorization: Poor Coding Practices (p.2476)
- V CWE-11: ASP.NET Misconfiguration: Creating Debug Binary (p.9)
- V CWE-103: Struts: Incomplete validate() Method Definition (p.246)
- V CWE-104: Struts: Form Bean Does Not Extend Validation Class (p.249)
- V CWE-107: Struts: Unused Validation Form (p.257)
- V CWE-110: Struts: Validator Without Form Field (p.263)
- V CWE-111: Direct Use of Unsafe JNI (p.265)
- B CWE-242: Use of Inherently Dangerous Function (p.577)
- V CWE-245: J2EE Bad Practices: Direct Management of Connections (p.583)
- V CWE-246: J2EE Bad Practices: Direct Use of Sockets (p.585)
- B CWE-253: Incorrect Check of Function Return Value (p.603)
- B CWE-358: Improperly Implemented Security Check for Standard (p.864)
- V CWE-383: J2EE Bad Practices: Direct Use of Threads (p.917)
- B CWE-392: Missing Report of Error Condition (p.933)
- B CWE-393: Return of Wrong Status Code (p.935)
- B CWE-440: Expected Behavior Violation (p.1041)
- C CWE-446: UI Discrepancy for Security Feature (p.1051)
- B CWE-448: Obsolete Feature in UI (p.1054)
- B CWE-449: The UI Performs the Wrong Action (p.1055)
- C CWE-451: User Interface (UI) Misrepresentation of Critical Information (p.1057)
- V CWE-462: Duplicate Key in Associative List (Alist) (p.1082)
- B CWE-474: Use of Function with Inconsistent Implementations (p.1106)
- B CWE-475: Undefined Behavior for Input to API (p.1108)
- B CWE-476: NULL Pointer Dereference (p.1110)
- B CWE-477: Use of Obsolete Function (p.1116)
- B CWE-484: Omitted Break Statement in Switch (p.1138)
- B CWE-489: Active Debug Code (p.1148)
- C CWE-506: Embedded Malicious Code (p.1186)
- B CWE-507: Trojan Horse (p.1188)
- B CWE-508: Non-Replicating Malicious Code (p.1190)
- B CWE-509: Replicating Malicious Code (Virus or Worm) (p.1191)

- B CWE-510: Trapdoor (p.1191)
- B CWE-511: Logic/Time Bomb (p.1193)

- B CWE-547: Use of Hard-coded, Security-relevant Constants (p.1234)
- V CWE-560: Use of umask() with chmod-style Argument (p.1249)
- B CWE-561: Dead Code (p.1250)
- B CWE-563: Assignment to Variable without Use (p.1255)
- B CWE-570: Expression is Always False (p.1266)
- B CWE-571: Expression is Always True (p.1269)
- G CWE-573: Improper Following of Specification by Caller (p.1273)
- V CWE-575: EJB Bad Practices: Use of AWT Swing (p.1276)
- V CWE-576: EJB Bad Practices: Use of Java I/O (p.1278)
- V CWE-577: EJB Bad Practices: Use of Sockets (p.1280)
- V CWE-578: EJB Bad Practices: Use of Class Loader (p.1282)
- V CWE-579: J2EE Bad Practices: Non-serializable Object Stored in Session (p.1284)
- B CWE-581: Object Model Violation: Just One of Equals and Hashcode Defined (p.1287)
- V CWE-585: Empty Synchronized Block (p.1293)
- B CWE-586: Explicit Call to Finalize() (p.1295)
- V CWE-589: Call to Non-ubiquitous API (p.1299)
- V CWE-594: J2EE Framework: Saving Unserializable Objects to Disk (p.1307)
- B CWE-605: Multiple Binds to the Same Port (p.1331)
- B CWE-628: Function Call with Incorrectly Specified Arguments (p.1372)
- G CWE-675: Multiple Operations on Resource in Single-Operation Context (p.1452)
- B CWE-676: Use of Potentially Dangerous Function (p.1453)
- V CWE-683: Function Call With Incorrect Order of Arguments (p.1467)
- G CWE-684: Incorrect Provision of Specified Functionality (p.1468)
- V CWE-685: Function Call With Incorrect Number of Arguments (p.1469)
- V CWE-686: Function Call With Incorrect Argument Type (p.1471)
- V CWE-687: Function Call With Incorrectly Specified Argument Value (p.1472)
- V CWE-688: Function Call With Incorrect Variable or Reference as Argument (p.1474)
- B CWE-695: Use of Low-Level Functionality (p.1485)
- P| CWE-710: Improper Adherence to Coding Standards (p.1504)
- G CWE-758: Reliance on Undefined, Unspecified, or Implementation-Defined Behavior (p.1535)
- B CWE-766: Critical Data Element Declared Public (p.1559)
- V CWE-785: Use of Path Manipulation Function without Maximum-sized Buffer (p.1608)
- G CWE-912: Hidden Functionality (p.1753)
- B CWE-1007: Insufficient Visual Distinction of Homoglyphs Presented to User (p.1800)
- B CWE-1041: Use of Redundant Code (p.1818)
- B CWE-1043: Data Element Aggregating an Excessively Large Number of Non-Primitive Elements (p.1821)
- B CWE-1044: Architecture with Number of Horizontal Layers Outside of Expected Range (p.1822)
- B CWE-1045: Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor (p.1823)
- B CWE-1047: Modules with Circular Dependencies (p.1825)
- B CWE-1048: Invokable Control Element with Large Number of Outward Calls (p.1826)
- B CWE-1053: Missing Documentation for Design (p.1832)
- B CWE-1054: Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (p.1833)
- B CWE-1055: Multiple Inheritance from Concrete Classes (p.1834)
- B CWE-1056: Invokable Control Element with Variadic Parameters (p.1835)
- B CWE-1057: Data Access Operations Outside of Expected Data Manager Component (p.1836)
- G CWE-1059: Insufficient Technical Documentation (p.1838)
- B CWE-1060: Excessive Number of Inefficient Server-Side Data Accesses (p.1840)
- G CWE-1061: Insufficient Encapsulation (p.1841)

- B CWE-1062: Parent Class with References to Child Class (p.1842)
- B CWE-1064: Invokable Control Element with Signature Containing an Excessive Number of Parameters (p.1844)
- B CWE-1065: Runtime Resource Management Control Element in a Component Built to Run on Application Servers (p.1845)
- B CWE-1066: Missing Serialization Control Element (p.1846)
- B CWE-1068: Inconsistency Between Implementation and Documented Design (p.1848)
- V CWE-1069: Empty Exception Block (p.1849)
- B CWE-1070: Serializable Data Element Containing non-Serializable Item Elements (p.1851)
- B CWE-1071: Empty Code Block (p.1852)
- B CWE-1074: Class with Excessively Deep Inheritance (p.1855)
- B CWE-1075: Unconditional Control Flow Transfer outside of Switch Block (p.1856)
- C CWE-1076: Insufficient Adherence to Expected Conventions (p.1857)
- C CWE-1078: Inappropriate Source Code Style or Formatting (p.1859)
- B CWE-1079: Parent Class without Virtual Destructor Method (p.1860)
- B CWE-1080: Source Code File with Excessive Number of Lines of Code (p.1861)
- B CWE-1082: Class Instance Self Destruction Control Element (p.1862)
- B CWE-1083: Data Access from Outside Expected Data Manager Component (p.1863)
- B CWE-1085: Invokable Control Element with Excessive Volume of Commented-out Code (p.1865)
- B CWE-1086: Class with Excessive Number of Child Classes (p.1866)
- B CWE-1087: Class with Virtual Method without a Virtual Destructor (p.1867)
- B CWE-1090: Method Containing Access of a Member Element from Another Class (p.1870)
- B CWE-1092: Use of Same Invokable Control Element in Multiple Architectural Layers (p.1872)
- C CWE-1093: Excessively Complex Data Representation (p.1873)
- B CWE-1095: Loop Condition Value Update within the Loop (p.1875)
- B CWE-1097: Persistent Storable Data Element without Associated Comparison Control Element (p.1878)
- B CWE-1098: Data Element containing Pointer Item without Proper Copy Control Element (p.1879)
- B CWE-1099: Inconsistent Naming Conventions for Identifiers (p.1880)
- B CWE-1100: Insufficient Isolation of System-Dependent Functions (p.1881)
- B CWE-1101: Reliance on Runtime Component in Generated Code (p.1882)
- B CWE-1102: Reliance on Machine-Dependent Data Representation (p.1882)
- B CWE-1103: Use of Platform-Dependent Third Party Components (p.1883)
- B CWE-1105: Insufficient Encapsulation of Machine-Dependent Functionality (p.1885)
- B CWE-1106: Insufficient Use of Symbolic Constants (p.1886)
- B CWE-1107: Insufficient Isolation of Symbolic Constant Definitions (p.1887)
- B CWE-1108: Excessive Reliance on Global Variables (p.1888)
- B CWE-1109: Use of Same Variable for Multiple Purposes (p.1889)
- B CWE-1110: Incomplete Design Documentation (p.1890)
- B CWE-1111: Incomplete I/O Documentation (p.1891)
- B CWE-1112: Incomplete Documentation of Program Execution (p.1892)
- B CWE-1113: Inappropriate Comment Style (p.1893)
- B CWE-1114: Inappropriate Whitespace Style (p.1894)
- B CWE-1115: Source Code Element without Standard Prologue (p.1894)
- B CWE-1116: Inaccurate Comments (p.1895)
- B CWE-1117: Callable with Insufficient Behavioral Summary (p.1897)
- B CWE-1118: Insufficient Documentation of Error Handling Techniques (p.1898)
- B CWE-1119: Excessive Use of Unconditional Branching (p.1899)
- C CWE-1120: Excessive Code Complexity (p.1900)
- B CWE-1121: Excessive McCabe Cyclomatic Complexity (p.1901)

  - V CWE-329: Generation of Predictable IV with CBC Mode (p.796)
  - C CWE-330: Use of Insufficiently Random Values (p.799)
  - B CWE-331: Insufficient Entropy (p.806)
  - V CWE-332: Insufficient Entropy in PRNG (p.808)
  - V CWE-333: Improper Handling of Insufficient Entropy in TRNG (p.810)
  - B CWE-334: Small Space of Random Values (p.812)
  - B CWE-335: Incorrect Usage of Seeds in Pseudo-Random Number Generator (PRNG) (p.814)
  - V CWE-336: Same Seed in Pseudo-Random Number Generator (PRNG) (p.817)
  - V CWE-337: Predictable Seed in Pseudo-Random Number Generator (PRNG) (p.819)
  - B CWE-338: Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG) (p.821)
  - V CWE-339: Small Seed Space in PRNG (p.824)
  - C CWE-340: Generation of Predictable Numbers or Identifiers (p.826)
  - B CWE-341: Predictable from Observable State (p.827)
  - B CWE-342: Predictable Exact Value from Previous Values (p.829)
  - B CWE-343: Predictable Value Range from Previous Values (p.831)
  - B CWE-344: Use of Invariant Value in Dynamically Changing Context (p.832)
  - B CWE-1204: Generation of Weak Initialization Vector (IV) (p.1923)

- B CWE-1241: Use of Predictable Algorithm in Random Number Generator (p.1961)
- C CWE-1415: Comprehensive Categorization: Resource Control (p.2482)
- B CWE-385: Covert Timing Channel (p.922)
- B CWE-470: Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection') (p.1096)
- V CWE-473: PHP External Variable Modification (p.1105)
- B CWE-502: Deserialization of Untrusted Data (p.1181)
- C CWE-514: Covert Channel (p.1195)
- B CWE-515: Covert Storage Channel (p.1196)
- C CWE-672: Operation on a Resource after Expiration or Release (p.1444)
- B CWE-826: Premature Release of Resource During Expected Lifetime (p.1685)
- B CWE-910: Use of Expired File Descriptor (p.1749)
- B CWE-915: Improperly Controlled Modification of Dynamically-Determined Object Attributes (p.1757)
- B CWE-1104: Use of Unmaintained Third Party Components (p.1884)
- B CWE-1249: Application-Level Admin Tool with Inconsistent View of Underlying Operating System (p.1978)
- B CWE-1251: Mirrored Regions with Different Values (p.1981)
- B CWE-1277: Firmware Not Updateable (p.2041)
- B CWE-1310: Missing Ability to Patch ROM Code (p.2099)
- V CWE-1321: Improperly Controlled Modification of Object Prototype Attributes ('Prototype Pollution') (p.2121)
- B CWE-1329: Reliance on Component That is Not Updateable (p.2135)
- C CWE-1416: Comprehensive Categorization: Resource Lifecycle Management (p.2483)
- V CWE-98: Improper Control of Filename for Include/Require Statement in PHP Program ('PHP Remote File Inclusion') (p.235)
- C CWE-118: Incorrect Access of Indexable Resource ('Range Error') (p.290)
- B CWE-178: Improper Handling of Case Sensitivity (p.441)
- V CWE-192: Integer Coercion Error (p.479)
- V CWE-194: Unexpected Sign Extension (p.487)
- V CWE-195: Signed to Unsigned Conversion Error (p.490)
- V CWE-196: Unsigned to Signed Conversion Error (p.494)
- B CWE-197: Numeric Truncation Error (p.496)
- B CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.538)
- C CWE-221: Information Loss or Omission (p.550)
- B CWE-226: Sensitive Information in Resource Not Removed Before Reuse (p.555)
- V CWE-243: Creation of chroot Jail Without Changing Working Directory (p.579)
- B CWE-372: Incomplete Internal State Distinction (p.901)
- B CWE-386: Symbolic Name not Mapping to Correct Object (p.924)
- C CWE-400: Uncontrolled Resource Consumption (p.946)
- C CWE-404: Improper Resource Shutdown or Release (p.961)
- C CWE-405: Asymmetric Resource Consumption (Amplification) (p.967)
- C CWE-406: Insufficient Control of Network Message Volume (Network Amplification) (p.972)
- C CWE-407: Inefficient Algorithmic Complexity (p.974)
- B CWE-409: Improper Handling of Highly Compressed Data (Data Amplification) (p.978)
- B CWE-410: Insufficient Resource Pool (p.980)
- B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1028)
- V CWE-453: Insecure Default Variable Initialization (p.1061)
- B CWE-454: External Initialization of Trusted Variables or Data Stores (p.1063)
- V CWE-456: Missing Initialization of a Variable (p.1067)
- V CWE-457: Use of Uninitialized Variable (p.1072)
- B CWE-459: Incomplete Cleanup (p.1076)
- B CWE-460: Improper Cleanup on Thrown Exception (p.1080)
- B CWE-471: Modification of Assumed-Immutable Data (MAID) (p.1099)
- B CWE-487: Reliance on Package-level Scope (p.1144)
- V CWE-495: Private Data Structure Returned From A Public Method (p.1166)

- V CWE-496: Public Data Assigned to Private Array-Typed Field (p.1168)
- B CWE-501: Trust Boundary Violation (p.1179)
- V CWE-568: finalize() Method Without super.finalize() (p.1265)
- V CWE-580: clone() Method Without super.clone() (p.1285)
- V CWE-588: Attempt to Access Child of a Non-structure Pointer (p.1298)
- V CWE-607: Public Static Final Field References Mutable Object (p.1334)
- G CWE-610: Externally Controlled Reference to a Resource in Another Sphere (p.1339)
- V CWE-618: Exposed Unsafe ActiveX Method (p.1354)
- G CWE-662: Improper Synchronization (p.1420)
- P| CWE-664: Improper Control of a Resource Through its Lifetime (p.1424)
- G CWE-665: Improper Initialization (p.1426)
- G CWE-666: Operation on Resource in Wrong Phase of Lifetime (p.1432)
- G CWE-669: Incorrect Resource Transfer Between Spheres (p.1441)
- G CWE-673: External Influence of Sphere Definition (p.1448)
- B CWE-681: Incorrect Conversion between Numeric Types (p.1458)
- G CWE-704: Incorrect Type Conversion or Cast (p.1495)
- G CWE-706: Use of Incorrectly-Resolved Name or Reference (p.1499)
- B CWE-749: Exposed Dangerous Method or Function (p.1518)
- B CWE-770: Allocation of Resources Without Limits or Throttling (p.1566)
- B CWE-771: Missing Reference to Active Allocated Resource (p.1574)
- B CWE-772: Missing Release of Resource after Effective Lifetime (p.1576)
- V CWE-773: Missing Reference to Active File Descriptor or Handle (p.1581)
- V CWE-774: Allocation of File Descriptors or Handles Without Limits or Throttling (p.1582)
- V CWE-775: Missing Release of File Descriptor or Handle after Effective Lifetime (p.1584)
- B CWE-776: Improper Restriction of Recursive Entity References in DTDs ('XML Entity Expansion') (p.1585)
- B CWE-779: Logging of Excessive Data (p.1594)
- V CWE-782: Exposed IOCTL with Insufficient Access Control (p.1600)
- V CWE-827: Improper Control of Document Type Definition (p.1687)
- B CWE-829: Inclusion of Functionality from Untrusted Control Sphere (p.1692)
- V CWE-830: Inclusion of Web Functionality from an Untrusted Source (p.1698)
- B CWE-843: Access of Resource Using Incompatible Type ('Type Confusion') (p.1726)
- B CWE-908: Use of Uninitialized Resource (p.1742)
- B CWE-909: Missing Initialization of Resource (p.1746)
- B CWE-911: Improper Update of Reference Count (p.1751)
- G CWE-913: Improper Control of Dynamically-Managed Code Resources (p.1754)
- B CWE-920: Improper Restriction of Power Consumption (p.1770)
- G CWE-922: Insecure Storage of Sensitive Information (p.1773)
- V CWE-1042: Static Member Data Element outside of a Singleton Class Element (p.1820)
- B CWE-1046: Creation of Immutable Text Using String Concatenation (p.1824)
- B CWE-1049: Excessive Data Query Operations in a Large Data Table (p.1827)
- B CWE-1050: Excessive Platform Resource Consumption within a Loop (p.1829)
- B CWE-1051: Initialization with Hard-Coded Network Resource Configuration Data (p.1830)
- B CWE-1052: Excessive Use of Hard-Coded Literals in Initialization (p.1831)
- B CWE-1063: Creation of Class Instance within a Static Code Block (p.1843)
- B CWE-1067: Excessive Execution of Sequential Searches of Data Resource (p.1847)
- B CWE-1072: Data Resource Access without Use of Connection Pooling (p.1853)
- B CWE-1073: Non-SQL Invokable Control Element with Excessive Number of Data Resource Accesses (p.1854)
- B CWE-1084: Invokable Control Element with Excessive File or Data Access Operations (p.1864)
- B CWE-1089: Large Data Table with Excessive Number of Indices (p.1869)
- B CWE-1091: Use of Object without Invoking Destructor Method (p.1871)
- B CWE-1094: Excessive Index Range Scan for a Data Resource (p.1874)
- G CWE-1176: Inefficient CPU Computation (p.1911)

- B CWE-1188: Insecure Default Initialization of Resource (p.1913)
- B CWE-1221: Incorrect Register Defaults or Module Parameters (p.1930)
- C CWE-1229: Creation of Emergent Resource (p.1939)
- B CWE-1235: Incorrect Use of Autoboxing and Unboxing for Performance Critical Operations (p.1949)
- V CWE-1239: Improper Zeroization of Hardware Register (p.1954)
- B CWE-1246: Improper Write Handling in Limited-write Non-Volatile Memories (p.1970)
- B CWE-1250: Improper Preservation of Consistency Between Independent Representations of Shared State (p.1980)
- B CWE-1258: Exposure of Sensitive System Information Due to Uncleared Debug Information (p.1999)
- B CWE-1266: Improper Scrubbing of Sensitive Data from Decommissioned Device (p.2017)
- B CWE-1271: Uninitialized Value on Reset for Registers Holding Security Settings (p.2028)
- B CWE-1272: Sensitive Information Uncleared Before Debug/Power State Transition (p.2030)
- B CWE-1279: Cryptographic Operations are run Before Supporting Units are Ready (p.2045)
- B CWE-1301: Insufficient or Incomplete Data Removal within Hardware Component (p.2091)
- B CWE-1325: Improperly Controlled Sequential Memory Allocation (p.2127)
- V CWE-1330: Remanent Data Readable after Memory Erase (p.2138)
- B CWE-1333: Inefficient Regular Expression Complexity (p.2146)
- B CWE-1342: Information Exposure through Microarchitectural State after Transient Execution (p.2165)
- B CWE-1386: Insecure Operation on Windows Junction / Mount Point (p.2176)
- B CWE-1389: Incorrect Parsing of Numbers with Different Radices (p.2178)
- C CWE-1417: Comprehensive Categorization: Sensitive Information Exposure (p.2486)
- C CWE-200: Exposure of Sensitive Information to an Unauthorized Actor (p.501)
- B CWE-201: Insertion of Sensitive Information Into Sent Data (p.510)
- B CWE-203: Observable Discrepancy (p.514)
- B CWE-204: Observable Response Discrepancy (p.519)
- B CWE-205: Observable Behavioral Discrepancy (p.522)
- V CWE-206: Observable Internal Behavioral Discrepancy (p.523)
- V CWE-207: Observable Behavioral Discrepancy With Equivalent Products (p.524)
- B CWE-208: Observable Timing Discrepancy (p.526)
- B CWE-209: Generation of Error Message Containing Sensitive Information (p.528)
- B CWE-210: Self-generated Error Message Containing Sensitive Information (p.534)
- B CWE-211: Externally-Generated Error Message Containing Sensitive Information (p.536)
- B CWE-213: Exposure of Sensitive Information Due to Incompatible Policies (p.541)
- B CWE-214: Invocation of Process Using Visible Sensitive Information (p.543)
- B CWE-215: Insertion of Sensitive Information Into Debugging Code (p.545)
- B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.865)
- B CWE-497: Exposure of Sensitive System Information to an Unauthorized Control Sphere (p.1170)
- V CWE-526: Cleartext Storage of Sensitive Information in an Environment Variable (p.1210)
- V CWE-531: Inclusion of Sensitive Information in Test Code (p.1216)
- B CWE-532: Insertion of Sensitive Information into Log File (p.1217)
- V CWE-535: Exposure of Information Through Shell Error Message (p.1220)
- V CWE-536: Servlet Runtime Error Message Containing Sensitive Information (p.1221)
- V CWE-537: Java Runtime Error Message Containing Sensitive Information (p.1222)
- B CWE-538: Insertion of Sensitive Information into Externally-Accessible File or Directory (p.1224)
- B CWE-540: Inclusion of Sensitive Information in Source Code (p.1227)
- V CWE-541: Inclusion of Sensitive Information in an Include File (p.1228)
- V CWE-548: Exposure of Information Through Directory Listing (p.1236)
- V CWE-550: Server-generated Error Message Containing Sensitive Information (p.1238)
- V CWE-598: Use of GET Request Method With Sensitive Query Strings (p.1315)
- V CWE-615: Inclusion of Sensitive Information in Source Code Comments (p.1348)
- V CWE-651: Exposure of WSDL File Containing Sensitive Information (p.1407)
- B CWE-1254: Incorrect Comparison Logic Granularity (p.1987)
- V CWE-1255: Comparison Logic is Vulnerable to Power Side-Channel Attacks (p.1989)
- B CWE-1273: Device Unlock Credential Sharing (p.2032)

- B CWE-1295: Debug Messages Revealing Unnecessary Information (p.2076)
- B CWE-1300: Improper Protection of Physical Side Channels (p.2087)
- C CWE-1418: Comprehensive Categorization: Violation of Secure Design Principles (p.2488)
- B CWE-250: Execution with Unnecessary Privileges (p.589)
- C CWE-424: Improper Protection of Alternate Path (p.1004)
- B CWE-447: Unimplemented or Unsupported Feature in UI (p.1053)
- C CWE-636: Not Failing Securely ('Failing Open') (p.1374)
- C CWE-637: Unnecessary Complexity in Protection Mechanism (Not Using 'Economy of Mechanism') (p.1376)
- C CWE-638: Not Using Complete Mediation (p.1378)
- B CWE-653: Improper Isolation or Compartmentalization (p.1410)
- B CWE-654: Reliance on a Single Factor in a Security Decision (p.1412)
- C CWE-655: Insufficient Psychological Acceptability (p.1415)
- C CWE-656: Reliance on Security Through Obscurity (p.1417)
- C CWE-657: Violation of Secure Design Principles (p.1419)
- C CWE-671: Lack of Administrator Control over Security (p.1444)
- B CWE-1189: Improper Isolation of Shared Resources on System-on-a-Chip (SoC) (p.1914)
- B CWE-1192: System-on-Chip (SoC) Using Components without Unique, Immutable Identifiers (p.1920)
- B CWE-1303: Non-Transparent Sharing of Microarchitectural Resources (p.2094)
- B CWE-1331: Improper Isolation of Shared Resources in Network On Chip (NoC) (p.2140)
- G CWE-1395: Dependency on Vulnerable Third-Party Component (p.2191)

## Deprecated

---

### **CWE-1: DEPRECATED: Location**

CWE ID : 1

#### Summary

This category has been deprecated. It was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-3: DEPRECATED: Technology-specific Environment Issues**

CWE ID : 3

#### Summary

This category has been deprecated. It was originally intended as a "catch-all" for environment issues for technologies that did not have their own CWE, but it introduced unnecessary depth and complexity to the Development View (CWE-699).

---

### **CWE-4: DEPRECATED: J2EE Environment Issues**

CWE ID : 4

#### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-10: DEPRECATED: ASP.NET Environment Issues**

CWE ID : 10

#### Summary

This category has been deprecated. It added unnecessary depth and complexity to its associated views.

---

### **CWE-17: DEPRECATED: Code**

CWE ID : 17

#### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

---

## **CWE-18: DEPRECATED: Source Code**

CWE ID : 18

### **Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-21: DEPRECATED: Pathname Traversal and Equivalence Errors**

CWE ID : 21

### **Summary**

This category has been deprecated. It was originally used for organizing weaknesses involving file names, which enabled access to files outside of a restricted directory (path traversal) or to perform operations on files that would otherwise be restricted (path equivalence). Consider using either the File Handling Issues category (CWE-1219) or the class Use of Incorrectly-Resolved Name or Reference (CWE-706).

---

## **CWE-60: DEPRECATED: UNIX Path Link Problems**

CWE ID : 60

### **Summary**

This category has been deprecated. It covered a very low level of abstraction based on operating system, which was not useful for any existing view.

---

## **CWE-63: DEPRECATED: Windows Path Link Problems**

CWE ID : 63

### **Summary**

This category has been deprecated. It covered a very low level of abstraction based on operating system, which was not useful for any existing view.

---

## **CWE-68: DEPRECATED: Windows Virtual File Problems**

CWE ID : 68

### **Summary**

This category has been deprecated as it was found to be an unnecessary abstraction of platform specific details. Please refer to the category CWE-632 and weakness CWE-66 for relevant relationships.

---

## **CWE-70: DEPRECATED: Mac Virtual File Problems**

CWE ID : 70

---

### Summary

This category has been deprecated as it was found to be an unnecessary abstraction of platform specific details. Please refer to the category CWE-632 and weakness CWE-66 for relevant relationships.

---

## **CWE-71: DEPRECATED: Apple '.DS\_Store'**

CWE ID : 71

---

### Description

This entry has been deprecated as it represents a specific observed example of a UNIX Hard Link weakness type rather than its own individual weakness type. Please refer to CWE-62.

---

## **CWE-92: DEPRECATED: Improper Sanitization of Custom Special Characters**

CWE ID : 92

---

### Description

This entry has been deprecated. It originally came from PLOVER, which sometimes defined "other" and "miscellaneous" categories in order to satisfy exhaustiveness requirements for taxonomies. Within the context of CWE, the use of a more abstract entry is preferred in mapping situations. CWE-75 is a more appropriate mapping.

---

## **CWE-100: DEPRECATED: Technology-Specific Input Validation Problems**

CWE ID : 100

---

### Summary

This category has been deprecated. It was originally intended as a "catch-all" for input validation problems in technologies that did not have their own CWE, but introduces unnecessary depth to the hierarchy.

---

## **CWE-101: DEPRECATED: Struts Validation Problems**

CWE ID : 101

---

### Summary

This category has been deprecated. It was originally used for organizing the Development View (CWE-69 9), but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-132: DEPRECATED: Miscalculated Null Termination**

CWE ID : 132

---

## Description

This entry has been deprecated because it was a duplicate of CWE-170. All content has been transferred to CWE-170.

## CWE-139: DEPRECATED: General Special Element Problems

CWE ID : 139

### Summary

This entry has been deprecated. It is a leftover from PLOVER, but CWE-138 is a more appropriate mapping.

## CWE-169: DEPRECATED: Technology-Specific Special Elements

CWE ID : 169

### Summary

This category has been deprecated. It was originally intended as a "catch-all" for input validation problems in technologies that did not have their own CWE, but introduces unnecessary depth to the hierarchy.

## CWE-171: DEPRECATED: Cleansing, Canonicalization, and Comparison Errors

CWE ID : 171

### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree. Weaknesses in this category were related to improper handling of data within protection mechanisms that attempt to perform neutralization for untrusted data. These weaknesses can be found in other similar categories.

## CWE-216: DEPRECATED: Containment Errors (Container Errors)

CWE ID : 216

### Description

This entry has been deprecated, as it was not effective as a weakness and was structured more like a category. In addition, the name is inappropriate, since the "container" term is widely understood by developers in different ways than originally intended by PLOVER, the original source for this entry.

## CWE-217: DEPRECATED: Failure to Protect Stored Data from Modification

CWE ID : 217

### Description

This entry has been deprecated because it incorporated and confused multiple weaknesses. The issues formerly covered in this entry can be found at CWE-766 and CWE-767.

---

## **CWE-218: DEPRECATED: Failure to provide confidentiality for stored data**

CWE ID : 218

---

### Description

This weakness has been deprecated because it was a duplicate of CWE-493. All content has been transferred to CWE-493.

---

## **CWE-225: DEPRECATED: General Information Management Problems**

CWE ID : 225

---

### Description

This weakness can be found at CWE-199.

---

## **CWE-247: DEPRECATED: Reliance on DNS Lookups in a Security Decision**

CWE ID : 247

---

### Description

This entry has been deprecated because it was a duplicate of CWE-350. All content has been transferred to CWE-350.

---

## **CWE-249: DEPRECATED: Often Misused: Path Manipulation**

CWE ID : 249

---

### Description

This entry has been deprecated because of name confusion and an accidental combination of multiple weaknesses. Most of its content has been transferred to CWE-785.

---

## **CWE-292: DEPRECATED: Trusting Self-reported DNS Name**

CWE ID : 292

---

### Description

This entry has been deprecated because it was a duplicate of CWE-350. All content has been transferred to CWE-350.

---

## **CWE-365: DEPRECATED: Race Condition in Switch**

2672

---

**CWE ID : 365**

---

**Description**

This entry has been deprecated. There are no documented cases in which a switch's control expression is evaluated more than once.

---

**CWE-373: DEPRECATED: State Synchronization Error**

**CWE ID : 373**

---

**Description**

This entry was deprecated because it overlapped the same concepts as race condition (CWE-362) and Improper Synchronization (CWE-662).

---

**CWE-376: DEPRECATED: Temporary File Issues**

**CWE ID : 376**

---

**Summary**

This category has been deprecated. It was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree. Consider using the File Handling Issues category (CWE-1219).

---

**CWE-380: DEPRECATED: Technology-Specific Time and State Issues**

**CWE ID : 380**

---

**Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

**CWE-381: DEPRECATED: J2EE Time and State Issues**

**CWE ID : 381**

---

**Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

**CWE-418: DEPRECATED: Channel Errors**

**CWE ID : 418**

---

**Summary**

---

CWE-373: DEPRECATED: State Synchronization Error

This category has been deprecated because it is redundant with the grouping provided by CWE-417.

---

### **CWE-423: DEPRECATED: Proxied Trusted Channel**

CWE ID : 423

#### **Description**

This entry has been deprecated because it was a duplicate of CWE-441. All content has been transferred to CWE-441.

---

### **CWE-442: DEPRECATED: Web Problems**

CWE ID : 442

#### **Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-443: DEPRECATED: HTTP response splitting**

CWE ID : 443

#### **Description**

This weakness can be found at CWE-113.

---

### **CWE-445: DEPRECATED: User Interface Errors**

CWE ID : 445

#### **Summary**

This weakness has been deprecated because it was a duplicate of CWE-355. All content has been transferred to CWE-355.

---

### **CWE-458: DEPRECATED: Incorrect Initialization**

CWE ID : 458

#### **Description**

This weakness has been deprecated because its name and description did not match. The description duplicated CWE-454, while the name suggested a more abstract initialization problem. Please refer to CWE-665 for the more abstract problem.

---

### **CWE-461: DEPRECATED: Data Structure Issues**

---

**CWE ID : 461**

### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-490: DEPRECATED: Mobile Code Issues**

**CWE ID : 490**

### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-503: DEPRECATED: Byte/Object Code**

**CWE ID : 503**

### Summary

This category has been deprecated. It was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-504: DEPRECATED: Motivation/Intent**

**CWE ID : 504**

### Summary

This category has been deprecated. It was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-505: DEPRECATED: Intentionally Introduced Weakness**

**CWE ID : 505**

### Summary

This category has been deprecated as it was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-513: DEPRECATED: Intentionally Introduced Nonmalicious Weakness**

**CWE ID : 513**

### Summary

---

This category has been deprecated as it was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-516: DEPRECATED: Covert Timing Channel**

CWE ID : 516

#### **Description**

This weakness can be found at CWE-385.

---

### **CWE-517: DEPRECATED: Other Intentional, Nonmalicious Weakness**

CWE ID : 517

#### **Summary**

This category has been deprecated as it was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-518: DEPRECATED: Inadvertently Introduced Weakness**

CWE ID : 518

#### **Summary**

This category has been deprecated as it was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-519: DEPRECATED: .NET Environment Issues**

CWE ID : 519

#### **Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-533: DEPRECATED: Information Exposure Through Server Log Files**

CWE ID : 533

#### **Description**

This entry has been deprecated because its abstraction was too low-level. See CWE-532.

---

### **CWE-534: DEPRECATED: Information Exposure Through Debug Log Files**

CWE ID : 534

---

### Description

This entry has been deprecated because its abstraction was too low-level. See CWE-532.

---

## **CWE-542: DEPRECATED: Information Exposure Through Cleanup Log Files**

CWE ID : 542

### Description

This entry has been deprecated because its abstraction was too low-level. See CWE-532.

---

## **CWE-545: DEPRECATED: Use of Dynamic Class Loading**

CWE ID : 545

### Description

This weakness has been deprecated because it partially overlaps CWE-470, it describes legitimate programmer behavior, and other portions will need to be integrated into other entries.

---

## **CWE-559: DEPRECATED: Often Misused: Arguments and Parameters**

CWE ID : 559

### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-592: DEPRECATED: Authentication Bypass Issues**

CWE ID : 592

### Description

This weakness has been deprecated because it covered redundant concepts already described in CWE-287.

---

## **CWE-596: DEPRECATED: Incorrect Semantic Object Comparison**

CWE ID : 596

### Description

This weakness has been deprecated. It was poorly described and difficult to distinguish from other entries. It was also inappropriate to assign a separate ID solely because of domain-specific considerations. Its closest equivalent is CWE-1023.

---

## **CWE-630: DEPRECATED: Weaknesses Examined by SAMATE**

CWE ID : 630

### **Objective**

This view has been deprecated. It was only used for an early year of the NIST SAMATE project, and it did not represent any official or commonly-utilized list.

---

## **CWE-631: DEPRECATED: Resource-specific Weaknesses**

CWE ID : 631

### **Objective**

This view has been deprecated because it is not actively maintained and does not provide utility to stakeholders. It was originally created before CWE 1.0 as a simple example of how views could be structured within CWE.

---

## **CWE-632: DEPRECATED: Weaknesses that Affect Files or Directories**

CWE ID : 632

### **Summary**

This category has been deprecated. It was not actively maintained, and it was not useful to stakeholders. It was originally created before CWE 1.0 as part of view CWE-631, which was a simple example of how views could be structured within CWE.

---

## **CWE-633: DEPRECATED: Weaknesses that Affect Memory**

CWE ID : 633

### **Summary**

This category has been deprecated. It was not actively maintained, and it was not useful to stakeholders. It was originally created before CWE 1.0 as part of view CWE-631, which was a simple example of how views could be structured within CWE.

---

## **CWE-634: DEPRECATED: Weaknesses that Affect System Processes**

CWE ID : 634

### **Summary**

This category has been deprecated. It was not actively maintained, and it was not useful to stakeholders. It was originally created before CWE 1.0 as part of view CWE-631, which was a simple example of how views could be structured within CWE.

---

## **CWE-679: DEPRECATED: Chain Elements**

CWE ID : 679

2678

---

## Objective

This view has been deprecated. It has limited utility for stakeholders, since all weaknesses can be links in a chain.

---

## **CWE-769: DEPRECATED: Uncontrolled File Descriptor Consumption**

CWE ID : 769

## Description

This entry has been deprecated because it was a duplicate of CWE-774. All content has been transferred to CWE-774.

---

## **CWE-999: DEPRECATED: Weaknesses without Software Fault Patterns**

CWE ID : 999

## Objective

This view has been deprecated. It was based on gaps in another view (CWE-888) related to research that is no longer updated, but was complete with respect to CWE at the time it was conducted.

---

## **CWE-1187: DEPRECATED: Use of Uninitialized Resource**

CWE ID : 1187

## Description

This entry has been deprecated because it was a duplicate of CWE-908. All content has been transferred to CWE-908.

---

## **CWE-1324: DEPRECATED: Sensitive Information Accessible by Physical Probing of JTAG Interface**

CWE ID : 1324

## Description

This entry has been deprecated because it was at a lower level of abstraction than supported by CWE. All relevant content has been integrated into CWE-319.

---

## **Glossary**

---

# Index

## A

Absolute Path Traversal, 74  
 Acceptance of Extraneous Untrusted Data With Trusted Data, 844  
 Access Control Check Implemented After Asset is Accessed, 2047  
 Access of Memory Location After End of Buffer, 1621  
 Access of Memory Location Before Start of Buffer, 1610  
 Access of Resource Using Incompatible Type ('Type Confusion'), 1726  
 Access of Uninitialized Pointer, 1680  
 Access to Critical Private Variable via Public Method, 1562  
 Active Debug Code, 1148  
 Addition of Data Structure Sentinel, 1085  
 Allocation of File Descriptors or Handles Without Limits or Throttling, 1582  
 Allocation of Resources Without Limits or Throttling, 1566  
 Always-Incorrect Control Flow Implementation, 1442  
 API / Function Errors, 2413  
 Application-Level Admin Tool with Inconsistent View of Underlying Operating System, 1978  
 Architectural Concepts, 2516(*Graph: 2613*)  
 Architecture with Number of Horizontal Layers Outside of Expected Range, 1822  
 Array Declared Public, Final, and Static, 1288  
 ASP.NET Misconfiguration: Creating Debug Binary, 9  
 ASP.NET Misconfiguration: Improper Model Validation, 1910  
 ASP.NET Misconfiguration: Missing Custom Error Page, 11  
 ASP.NET Misconfiguration: Not Using Input Validation Framework, 1244  
 ASP.NET Misconfiguration: Password in Configuration File, 13  
 ASP.NET Misconfiguration: Use of Identity Impersonation, 1246  
 Assigning instead of Comparing, 1130  
 Assignment of a Fixed Address to a Pointer, 1296  
 Assignment to Variable without Use, 1255  
 Assumed-Immutable Data is Stored in Writable Memory, 2051  
 Asymmetric Resource Consumption (Amplification), 967  
 Attempt to Access Child of a Non-structure Pointer, 1298  
 Audit, 2341  
 Audit / Logging Errors, 2404  
 Authenticate Actors, 2342  
 Authentication Bypass by Alternate Name, 690  
 Authentication Bypass by Assumed-Immutable Data, 723  
 Authentication Bypass by Capture-replay, 699  
 Authentication Bypass by Primary Weakness, 727  
 Authentication Bypass by Spoofing, 692  
 Authentication Bypass Using an Alternate Path or Channel, 688  
 Authentication Bypass: OpenSSL CTX Object Modified after SSL Objects are Created, 1305  
 Authentication Errors, 2405  
 Authorization Bypass Through User-Controlled Key, 1380  
 Authorization Bypass Through User-Controlled SQL Primary Key, 1261  
 Authorization Errors, 2406  
 Authorize Actors, 2343  
 Automated Recognition Mechanism with Inadequate Detection or Handling of Adversarial Input Perturbations, 1816

## B

Bad Coding Practices, 2339

Behavioral Change in New Version or Environment, 1040  
 Behavioral Problems, 2217  
 Binding to an Unrestricted IP Address, 2131  
 Buffer Access Using Size of Source Buffer, 1661  
 Buffer Access with Incorrect Length Value, 1654  
 Buffer Copy without Checking Size of Input ('Classic Buffer Overflow'), 303  
 Buffer Over-read, 332  
 Buffer Under-read, 335  
 Buffer Underwrite ('Buffer Underflow'), 324  
 Business Logic Errors, 2259

## C

Call to Non-ubiquitous API, 1299  
 Call to Thread run() instead of start(), 1271  
 Callable with Insufficient Behavioral Summary, 1897  
 CERT C Secure Coding Standard (2008) Appendix - POSIX (POS), 2247  
 CERT C Secure Coding Standard (2008) Chapter 10 - Input Output (FIO), 2242  
 CERT C Secure Coding Standard (2008) Chapter 11 - Environment (ENV), 2243  
 CERT C Secure Coding Standard (2008) Chapter 12 - Signals (SIG), 2244  
 CERT C Secure Coding Standard (2008) Chapter 13 - Error Handling (ERR), 2245

 CERT C Secure Coding Standard (2008) Chapter 2 - Preprocessor (PRE), 2234  
 CERT C Secure Coding Standard (2008) Chapter 3 - Declarations and Initialization (DCL), 2235  
 CERT C Secure Coding Standard (2008) Chapter 4 - Expressions (EXP), 2236  
 CERT C Secure Coding Standard (2008) Chapter 5 - Integers (INT), 2237  
 CERT C Secure Coding Standard (2008) Chapter 6 - Floating Point (FLP), 2238  
 CERT C Secure Coding Standard (2008) Chapter 7 - Arrays (ARR), 2238  
 CERT C Secure Coding Standard (2008) Chapter 8 - Characters and Strings (STR), 2239  
 CERT C Secure Coding Standard (2008) Chapter 9 - Memory Management (MEM), 2240  
 CERT C++ Secure Coding Section 01 - Preprocessor (PRE), 2275  
 CERT C++ Secure Coding Section 02 - Declarations and Initialization (DCL), 2275  
 CERT C++ Secure Coding Section 03 - Expressions (EXP), 2276  
 CERT C++ Secure Coding Section 04 - Integers (INT), 2277  
 CERT C++ Secure Coding Section 05 - Floating Point Arithmetic (FLP), 2277  
 CERT C++ Secure Coding Section 06 - Arrays and the STL (ARR), 2278  
 CERT C++ Secure Coding Section 07 - Characters and Strings (STR), 2279  
 CERT C++ Secure Coding Section 08 - Memory Management (MEM), 2279  
 CERT C++ Secure Coding Section 09 - Input Output (FIO), 2280  
 CERT C++ Secure Coding Section 10 - Environment (ENV), 2282  
 CERT C++ Secure Coding Section 11 - Signals (SIG), 2282  
 CERT C++ Secure Coding Section 12 - Exceptions and Error Handling (ERR), 2283

- CERT C++ Secure Coding Section 13 - Object Oriented Programming (OOP), 2284  
 CERT C++ Secure Coding Section 14 - Concurrency (CON), 2284  
 CERT C++ Secure Coding Section 49 - Miscellaneous (MSC), 2285  
 Channel Accessible by Non-Endpoint, 717  
 CISQ Data Protection Measures, 2529(*Graph: 2638*)  
 CISQ Quality Measures (2016), 2520(*Graph: 2620*)  
 CISQ Quality Measures (2016) - Maintainability, 2362  
 CISQ Quality Measures (2016) - Performance Efficiency, 2364  
 CISQ Quality Measures (2016) - Reliability, 2360  
 CISQ Quality Measures (2016) - Security, 2363  
 CISQ Quality Measures (2020), 2527(*Graph: 2633*)  
 CISQ Quality Measures - Efficiency, 2418  
 CISQ Quality Measures - Maintainability, 2416  
 CISQ Quality Measures - Reliability, 2415  
 CISQ Quality Measures - Security, 2417  
 Class Instance Self Destruction Control Element, 1862  
 Class with Excessive Number of Child Classes, 1866  
 Class with Excessively Deep Inheritance, 1855  
 Class with Virtual Method without a Virtual Destructor, 1867  
 Cleartext Storage in a File or on Disk, 757  
 Cleartext Storage in the Registry, 759  
 Cleartext Storage of Sensitive Information, 751  
 Cleartext Storage of Sensitive Information in a Cookie, 761  
 Cleartext Storage of Sensitive Information in an Environment Variable, 1210  
 Cleartext Storage of Sensitive Information in Executable, 765  
 Cleartext Storage of Sensitive Information in GUI, 764  
 Cleartext Storage of Sensitive Information in Memory, 762  
 Cleartext Transmission of Sensitive Information, 766  
 Client-Side Enforcement of Server-Side Security, 1325  
 clone() Method Without super.clone(), 1285  
 Cloneable Class Containing Sensitive Information, 1173  
 Collapse of Data into Unsafe Value, 452  
 Command Shell in Externally Accessible Directory, 1244  
 Communication Channel Errors, 2215  
 Comparing instead of Assigning, 1134  
 Comparison Logic is Vulnerable to Power Side-Channel Attacks, 1989  
 Comparison of Classes by Name, 1141  
 Comparison of Incompatible Types, 1811  
 Comparison of Object References Instead of Object Contents, 1309  
 Comparison Using Wrong Factors, 1812  
 Compilation with Insufficient Warnings or Errors, 1907  
 Compiler Optimization Removal or Modification of Security-critical Code, 1516  
 Compiler Removal of Code to Clear Buffers, 14  
 Complexity Issues, 2412  
 Composites, 2494  
 Comprehensive Categorization for Software Assurance Trends, 2537(*Graph: 2649*)  
 Comprehensive Categorization: Access Control, 2454  
 Comprehensive Categorization: Comparison, 2459  
 Comprehensive Categorization: Component Interaction, 2460  
 Comprehensive Categorization: Concurrency, 2462  
 Comprehensive Categorization: Encryption, 2463  
 Comprehensive Categorization: Exposed Resource, 2464  
 Comprehensive Categorization: File Handling, 2466  
 Comprehensive Categorization: Improper Check or Handling of Exceptional Conditions, 2468  
 Comprehensive Categorization: Improper Input Validation, 2468  
 Comprehensive Categorization: Improper Neutralization, 2469  
 Comprehensive Categorization: Incorrect Calculation, 2471  
 Comprehensive Categorization: Injection, 2472  
 Comprehensive Categorization: Insufficient Control Flow Management, 2474  
 Comprehensive Categorization: Insufficient Verification of Data Authenticity, 2475  
 Comprehensive Categorization: Memory Safety, 2461  
 Comprehensive Categorization: Poor Coding Practices, 2476  
 Comprehensive Categorization: Protection Mechanism Failure, 2480  
 Comprehensive Categorization: Randomness, 2481  
 Comprehensive Categorization: Resource Control, 2482  
 Comprehensive Categorization: Resource Lifecycle Management, 2483  
 Comprehensive Categorization: Sensitive Information Exposure, 2486  
 Comprehensive Categorization: Violation of Secure Design Principles, 2488  
 Comprehensive CWE Dictionary, 2538  
 Concurrency Issues, 2220  
 Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition'), 871  
 Configuration, 2195  
 Context Switching Race Condition, 894  
 Core and Compute Issues, 2400  
 Covert Channel, 1195  
 Covert Storage Channel, 1196  
 Covert Timing Channel, 922  
 CPU Hardware Not Configured to Support Exclusivity of Write and Execute Operations, 1984  
 Creation of chroot Jail Without Changing Working Directory, 579  
 Creation of Class Instance within a Static Code Block, 1843  
 Creation of Emergent Resource, 1939  
 Creation of Immutable Text Using String Concatenation, 1824  
 Creation of Temporary File in Directory with Insecure Permissions, 913  
 Creation of Temporary File With Insecure Permissions, 911  
 Credentials Management Errors, 2203  
 Critical Data Element Declared Public, 1559  
 Critical Public Variable Without Final Modifier, 1159  
 Cross-Cutting, 2345  
 Cross-Cutting Problems, 2404  
 Cross-Site Request Forgery (CSRF), 851  
 Cryptographic Issues, 2207  
 Cryptographic Operations are run Before Supporting Units are Ready, 2045  
 CWE Cross-section, 2506
- ## D
- Dangerous Signal Handler not Disabled During Sensitive Operations, 1025  
 Dangling Database Cursor ('Cursor Injection'), 1356  
 Data Access from Outside Expected Data Manager Component, 1863  
 Data Access Operations Outside of Expected Data Manager Component, 1836  
 Data Element Aggregating an Excessively Large Number of Non-Primitive Elements, 1821  
 Data Element containing Pointer Item without Proper Copy Control Element, 1879  
 Data Integrity Issues, 2407  
 Data Neutralization Issues, 2198  
 Data Processing Errors, 2196

- Data Resource Access without Use of Connection Pooling, 1853
  - Data Validation Issues, 2408
  - Dead Code, 1250
  - Deadlock, 1704
  - Debug and Test Problems, 2403
  - Debug Messages Revealing Unnecessary Information, 2076
  - Declaration of Catch for Generic Exception, 941
  - Declaration of Throws for Generic Exception, 943
  - Declaration of Variable with Unnecessarily Wide Scope, 1906
  - Deletion of Data Structure Sentinel, 1083
  - Dependency on Vulnerable Third-Party Component, 2191
  - Deployment of Wrong Handler, 1022
  - Deprecated Entries, 2489
  - DEPRECATED: Apple '.DS\_Store', 2670
  - DEPRECATED: ASP.NET Environment Issues, 2668
  - DEPRECATED: Authentication Bypass Issues, 2677
  - DEPRECATED: Byte/Object Code, 2675
  - DEPRECATED: Chain Elements, 2678
  - DEPRECATED: Channel Errors, 2673
  - DEPRECATED: Cleansing, Canonicalization, and Comparison Errors, 2671
  - DEPRECATED: Code, 2668
  - DEPRECATED: Containment Errors (Container Errors), 2671
  - DEPRECATED: Covert Timing Channel, 2676
  - DEPRECATED: Data Structure Issues, 2674
  - DEPRECATED: Failure to Protect Stored Data from Modification, 2671
  - DEPRECATED: Failure to provide confidentiality for stored data, 2672
  - DEPRECATED: General Information Management Problems, 2672
  - DEPRECATED: General Special Element Problems, 2671
  - DEPRECATED: HTTP response splitting, 2674
  - DEPRECATED: Improper Sanitization of Custom Special Characters, 2670
  - DEPRECATED: Inadvertently Introduced Weakness, 2676
  - DEPRECATED: Incorrect Initialization, 2674
  - DEPRECATED: Incorrect Semantic Object Comparison, 2677
  - DEPRECATED: Information Exposure Through Cleanup Log Files, 2677
  - DEPRECATED: Information Exposure Through Debug Log Files, 2676
  - DEPRECATED: Information Exposure Through Server Log Files, 2676

  - DEPRECATED: Weaknesses without Software Fault Patterns, 2679
  - DEPRECATED: Web Problems, 2674
  - DEPRECATED: Windows Path Link Problems, 2669
  - DEPRECATED: Windows Virtual File Problems, 2669
  - Deserialization of Untrusted Data, 1181
  - Detection of Error Condition Without Action, 925
  - Device Unlock Credential Sharing, 2032
  - Direct Request ('Forced Browsing'), 1005
  - Direct Use of Unsafe JNI, 265
  - Divide By Zero, 896
  - DMA Device Enabled Too Early in Boot Phase, 1916
  - Documentation Issues, 2411
  - Double Decoding of the Same Data, 433
  - Double Free, 989
  - Double-Checked Locking, 1337
  - Doubled Character XSS Manipulations, 187
  - Download of Code Without Integrity Check, 1161
  - Duplicate Key in Associative List (Alist), 1082
  - Dynamic Variable Evaluation, 1370
- ## E
- EJB Bad Practices: Use of AWT Swing, 1276
  - EJB Bad Practices: Use of Class Loader, 1282
  - EJB Bad Practices: Use of Java I/O, 1278
  - EJB Bad Practices: Use of Sockets, 1280
  - EJB Bad Practices: Use of Synchronization Primitives, 1274
  - Embedded Malicious Code, 1186
  - Empty Code Block, 1852
  - Empty Exception Block, 1849
  - Empty Password in Configuration File, 611
  - Empty Synchronized Block, 1293
  - Encapsulation Issues, 2413
  - Encoding Error, 429
  - Encrypt Data, 2346
  - Entries with Maintenance Notes, 2519
  - Error Conditions, Return Values, Status Codes, 2212

- Excessive Attack Surface, 1905
  - Excessive Code Complexity, 1900
  - Excessive Data Query Operations in a Large Data Table, 1827
  - Excessive Execution of Sequential Searches of Data Resource, 1847
  - Excessive Halstead Complexity, 1902
  - Excessive Index Range Scan for a Data Resource, 1874
  - Excessive Iteration, 1705
  - Excessive McCabe Cyclomatic Complexity, 1901
  - Excessive Number of Inefficient Server-Side Data Accesses, 1840
  - Excessive Platform Resource Consumption within a Loop, 1829
  - Excessive Reliance on Global Variables, 1888
  - Excessive Use of Hard-Coded Literals in Initialization, 1831
  - Excessive Use of Self-Modifying Code, 1903
  - Excessive Use of Unconditional Branching, 1899
  - Excessively Complex Data Representation, 1873
  - Excessively Deep Nesting, 1904
  - Executable Regular Expression Error, 1364
  - Execution After Redirect (EAR), 1491
  - Execution with Unnecessary Privileges, 589
  - Expected Behavior Violation, 1041
  - Expired Pointer Dereference, 1682
  - Explicit Call to Finalize(), 1295
  - Exposed Dangerous Method or Function, 1518
  - Exposed IOCTL with Insufficient Access Control, 1600
  - Exposed Unsafe ActiveX Method, 1354
  - Exposure of Access Control List Files to an Unauthorized Control Sphere, 1214
  - Exposure of Backup File to an Unauthorized Control Sphere, 1215
  - Exposure of Core Dump File to an Unauthorized Control Sphere, 1213
  - Exposure of Data Element to Wrong Session, 1145
  - Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak'), 959
  - Exposure of Information Through Directory Listing, 1236
  - Exposure of Information Through Shell Error Message, 1220
  - Exposure of Private Personal Information to an Unauthorized Actor, 865
  - Exposure of Resource to Wrong Sphere, 1438
  - Exposure of Sensitive Information Due to Incompatible Policies, 541
  - Exposure of Sensitive Information Through Data Queries, 513
  - Exposure of Sensitive Information Through Metadata, 1940
  - Exposure of Sensitive Information to an Unauthorized Actor, 501
  - Exposure of Sensitive System Information Due to Uncleared Debug Information, 1999
  - Exposure of Sensitive System Information to an Unauthorized Control Sphere, 1170
  - Exposure of Version-Control Repository to an Unauthorized Control Sphere, 1212
  - Exposure of WSDL File Containing Sensitive Information, 1407
  - Expression is Always False, 1266
  - Expression is Always True, 1269
  - Expression Issues, 2221
  - External Control of Assumed-Immutable Web Parameter, 1101
  - External Control of Critical State Data, 1387
  - External Control of File Name or Path, 132
  - External Control of System or Configuration Setting, 17
  - External Influence of Sphere Definition, 1448
  - External Initialization of Trusted Variables or Data Stores, 1063
  - Externally Controlled Reference to a Resource in Another Sphere, 1339
  - Externally-Generated Error Message Containing Sensitive Information, 536
- ## F
- Fabric-Address Map Allows Programming of Unwarranted Overlaps of Protected and Unprotected Ranges, 2111
  - Failure to Disable Reserved Bits, 1926
  - Failure to Handle Incomplete Element, 573
  - Failure to Handle Missing Parameter, 567
  - Failure to Sanitize Paired Delimiters, 404
  - Failure to Sanitize Special Elements into a Different Plane (Special Element Injection), 142
  - File Handling Issues, 2410
  - Files or Directories Accessible to External Parties, 1240
  - finalize() Method Declared Public, 1290
  - finalize() Method Without super.finalize(), 1265
  - Firmware Not Updateable, 2041
  - Floating Point Comparison with Incorrect Operator, 1858
  - Free of Memory not on the Heap, 1301
  - Free of Pointer not at Start of Buffer, 1545
  - Function Call With Incorrect Argument Type, 1471
  - Function Call With Incorrect Number of Arguments, 1469
  - Function Call With Incorrect Order of Arguments, 1467
  - Function Call With Incorrect Variable or Reference as Argument, 1474
  - Function Call With Incorrectly Specified Argument Value, 1472
  - Function Call with Incorrectly Specified Arguments, 1372
- ## G
- General Circuit and Logic Design Concerns, 2399
  - Generation of Error Message Containing Sensitive Information, 528
  - Generation of Incorrect Security Tokens, 2026
  - Generation of Predictable IV with CBC Mode, 796
  - Generation of Predictable Numbers or Identifiers, 826
  - Generation of Weak Initialization Vector (IV), 1923

  - Unprotected Primary Channel, 998
  - Unprotected Transport of Credentials, 1206
  - Unprotected Windows Messaging Channel ('Shatter'), 1002
  - Unquoted Search Path or Element, 1019
  - Unrestricted Externally Accessible Lock, 982
  - Unrestricted Upload of File with Dangerous Type, 1028
  - Unsafe ActiveX Control Marked Safe For Scripting, 1362
  - Unsigned to Signed Conversion Error, 494
  - Unsynchronized Access to Shared Data in a Multithreaded Context, 1262
  - Untrusted Pointer Dereference, 1674
  - Untrusted Search Path, 1008
  - Unverified Ownership, 667
  - Unverified Password Change, 1357
  - URL Redirection to Untrusted Site ('Open Redirect'), 1319
  - Use After Free, 993
  - Use of a Broken or Risky Cryptographic Algorithm, 785
  - Use of a Cryptographic Primitive with a Risky Implementation, 1955
  - Use of a Key Past its Expiration Date, 779
  - Use of a Non-reentrant Function in a Concurrent Context, 1423
  - Use of a One-Way Hash with a Predictable Salt, 1542
  - Use of a One-Way Hash without a Salt, 1537
  - Use of Blocking Code in Single-threaded, Non-blocking Context, 2124
  - Use of Cache Containing Sensitive Information, 1208
  - Use of Client-Side Authentication, 1329
  - Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG), 821
  - Use of Default Credentials, 2186
  - Use of Default Cryptographic Key, 2189
  - Use of Default Password, 2187
  - Use of Expired File Descriptor, 1749
  - Use of Externally-Controlled Format String, 362
  - Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection'), 1096
  - Use of Function with Inconsistent Implementations, 1106
  - Use of GET Request Method With Sensitive Query Strings, 1315
  - Use of getlogin() in Multithreaded Application, 1247
  - Use of Hard-coded Credentials, 1642
  - Use of Hard-coded Cryptographic Key, 772
  - Use of Hard-coded Password, 613
  - Use of Hard-coded, Security-relevant Constants, 1234
  - Use of Implicit Intent for Sensitive Communication, 1782
  - Use of Incorrect Byte Ordering, 500
  - Use of Incorrect Operator, 1127
  - Use of Incorrectly-Resolved Name or Reference, 1499
  - Use of Inherently Dangerous Function, 577
  - Use of Inner Class Containing Sensitive Data, 1152
  - Use of Insufficiently Random Values, 799
  - Use of Invariant Value in Dynamically Changing Context, 832
  - Use of Less Trusted Source, 842
  - Use of Low-Level Functionality, 1485
  - Use of Multiple Resources with Duplicate Identifier, 1483
  - Use of Non-Canonical URL Paths for Authorization Decisions, 1399
  - Use of NullPointerException Catch to Detect NULL Pointer Dereference, 939
  - Use of Object without Invoking Destructor Method, 1871
  - Use of Obsolete Function, 1116
  - Use of Out-of-range Pointer Offset, 1677
  - Use of Password Hash Instead of Password for Authentication, 1711
  - Use of Password Hash With Insufficient Computational Effort, 1761
  - Use of Password System for Primary Authentication, 741
  - Use of Path Manipulation Function without Maximum-sized Buffer, 1608
  - Use of Persistent Cookies Containing Sensitive Information, 1226
  - Use of Platform-Dependent Third Party Components, 1883
  - Use of Pointer Subtraction to Determine Size, 1093
  - Use of Potentially Dangerous Function, 1453
  - Use of Predictable Algorithm in Random Number Generator, 1961
  - Use of Prohibited Code, 1912
  - Use of Redundant Code, 1818
  - Use of RSA Algorithm without OAEP, 1596
  - Use of Same Invokable Control Element in Multiple Architectural Layers, 1872
  - Use of Same Variable for Multiple Purposes, 1889
  - Use of Single-factor Authentication, 739
  - Use of Singleton Pattern Without Synchronization in a Multithreaded Context, 1230
  - Use of sizeof() on a Pointer Type, 1088
  - Use of umask() with chmod-style Argument, 1249
  - Use of Uninitialized Resource, 1742
  - Use of Uninitialized Variable, 1072
  - Use of Unmaintained Third Party Components, 1884
  - Use of Weak Credentials, 2183
  - Use of Weak Hash, 792
  - Use of Web Browser Cache Containing Sensitive Information, 1209
  - Use of Web Link to Untrusted Target with window.opener Access, 1806
  - Use of Wrong Operator in String Comparison, 1311
  - User Interface (UI) Misrepresentation of Critical Information, 1057
  - User Interface Security Issues, 2208
  - User Session Errors, 2409
  - Using Referer Field for Authentication, 697
