Raspberry Pi® - Powered Edge Devices

Our range of Raspberry Pi® powered edge devices, including HMI, edge controllers, and routers, has been successfully deployed in various industries such as energy management, automation, Industrial 4.0, smart buildings, and manufacturing. We are proud of the widespread adoption and positive feedback we have received, which has instilled us with great confidence in our products.

Revolutionize Classroom Management with Edgebox-RPI-200

Seed Hardware

[EdgeBox-RPI-200](#)

Industry

Energy Management, Smart Classroom

Solution Introduction

Our EdgeBox-RPI-200, powered by the Raspberry Pi® CM4 core, has been deployed in smart classrooms in China to address the challenge of managing lighting and temperature in an energy-efficient manner. The traditional approach to classroom management is often inefficient and fails to provide effective control over lighting and temperature, leading to energy waste and unhealthy conditions for students. The EdgeBox-RPI-200's rich IO/interface and open-source architecture make it an ideal controller center for managing multiple devices simultaneously. The solution has resulted in significant energy savings and improved health conditions for students in around 10 classrooms, with more deployments planned.

Attendance Tracking System Powered by reTerminal DM

Seed Hardware

[reTerminal DM](#)

Industry

Smart Building, Smart Office

Solution Introduction

A partner specializing in biometric technology provides a complete set of biometric software support and collaborates with Seed's Raspberry Pi®-powered HMI to offer a whole set of biometric solutions to end customers. This solution uses facial recognition to record time and attendance data and access control, which is essentially an electronic punch card machine that helps support the development of smart offices for global customers.

reTerminal DM Powered Intelligent Control System in Smart Building

Seed Hardware

EdgeBox-RPI-200, reTerminal DM

Industry

Smart Building, Energy Management

Solution Introduction

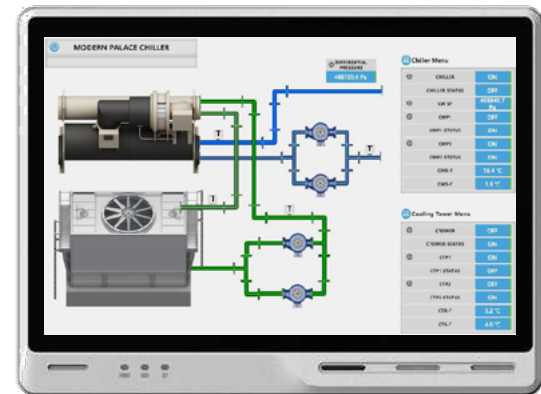

A Chinese smart building solution provider is a well-established player in the industry with over 15 years of experience and strong software development capabilities. Collaborating with Seed, they have developed an intelligent control system for multi-story office buildings using adaptive control methods that provide a constant and comfortable environment. The system employs Raspberry Pi®-powered hardware, EdgeBox-RPI-200, and reTerminal DM.

Centralized, Privacy-conscious, and AI-driven Home Automation Solution

Seed Hardware

[reTerminal](#)

Industry

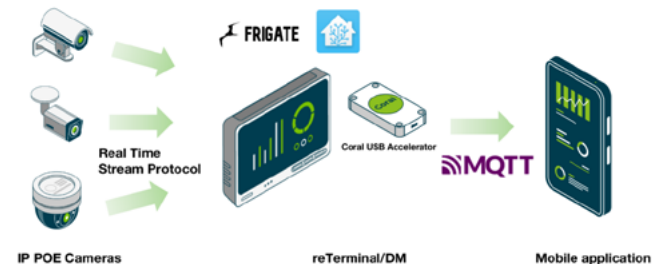

Smart Home

Solution Introduction

Integrating [Home Assistant](#) OS on the [Seed Studio reTerminal](#) and then installing [Frigate](#) as an add-on, along with a [Coral USB TPU](#) (Tensor Processing Unit), offers several benefits for your smart home setup and home automation projects. This transformative trio offers a unique opportunity to establish a centralized, privacy-conscious, and AI-driven home automation setup that not only enhances your lifestyle but also ensures the safety of your loved ones and property.

reTerminal and reTerminal DM in Energy Management

Seed Hardware

[reTerminal](#), [reTerminal DM](#)

Industry

Energy Management

Solution Introduction

An innovation solution provider specialized in energy management using reTerminal and reTerminal DM as additional safety controllers. They work as an additional redundant system to ensure the company's product is meeting safety and regulatory requirements. In these systems, reTerminals are also in charge of reporting relevant information to the cloud and using the LTE capabilities to report in events of power outages.

Location

Safety Controller, HMI

Indoor Energy Management

Seeed Hardware

[EdgeBox-RPI-200](#)

Industry

Energy Management

Solution Introduction

A solution provider from an European country integrates their in-house developed indoor energy management software with a range of hardware solutions provided by Seeed Studio, including various sensors and Raspberry Pi® gateways. This integrated solution is extensively utilized in end customers' indoor energy management projects. When indoor air quality reaches a certain level, it can activate ventilation or air purification devices.

Raspberry Pi-powered HM: [reTerminal DM](#)

Software Solution

HEATSYNC, an IOT Thermal System developed by Jordan Broome

Solution Introduction

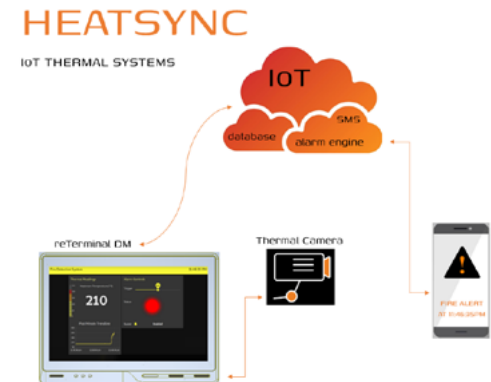

In Texas, an innovative engineer, [Jordan Broome](#), has developed a unique approach to fire monitoring and prevention for extensive industrial applications. He has integrated [Seeed Studio's Raspberry Pi®-powered device reTerminal DM](#) into a fire detection system. This system employs an ethernet-based thermal camera to identify the highest temperature spot in the video frame every 500 milliseconds. The system not only displays the current temperature but also plots a running chart of the temperature over the past minute. Upon detecting temperatures surpassing a user-defined threshold, the application activates the reTerminal DM's internal buzzer (with an option for silent alerts), sends a notification to a server ultimately resulting in an SMS alert, and triggers output(s). This setup empowers the end-user to implement customized automated responses tailored to specific safety requirements.

reTerminal DM in Manufacturing

Seed Hardware

[reTerminal DM](#)

Industry

Manufacturing

Solution Introduction

A Canadian company specialized in manufacturing has deployed reTerminal DM in their telemetry system to assist the customers. In this system, reTerminal aggregates various sensor readings over BLE and works as an HMI. It records the sensor data and subsequently transmits the recorded data to the cloud through a cellular connection.

Location

Canada

HMI

AI-based Defect Detection Powered by reTerminal DM

Seeed Hardware

[reTerminal DM](#)

Industry

Manufacturing / AI Detection

Solution Introduction

The system is based on reTerminal DM, equipped with their AI detection camera and deployed with their deep learning algorithms. This solution is for manufacturing and inspection during the mass production process, with a particular focus on improving the efficiency of defect detection and assembly verification. It reduces the time and error rate associated with manual inspection. The system will be extended to a wider range of production scenarios in the future.

reTerminal DM in Mining Industry

Seed Hardware

[reTerminal DM](#)

Industry

Mining Industry

Solution Introduction

A mining company is using reTerminal DM for safety distance detection and warning for mining trucks. When people or vehicles approach the mining trucks, the system alerts the drivers. The reTerminal DM serves as a LoRaWAN gateway, receiving UWB signals and mining truck GPS positioning to determine the distance between individuals and the trucks.

Workplace Safety Using reTerminal DM

Seed Hardware

[reTerminal DM](#)

Industry

Civil Engineering Construction Fields

Solution Introduction

The PPE detection system is a vital component in enhancing workplace safety. This solution involves a real-time detection system to ascertain whether essential Personal Protective Equipment (PPE) is being worn. The highly effective Raspberry Pi®-powered reTerminal DM with a built-in camera, by leveraging the power of YOLOv5 deep neural network architecture in TFLite version. reTerminal DM, achieves an impressive performance of 10 frames per second (FPS). Furthermore, by incorporating a Coral TPU, the system can achieve an enhanced speed of 20 FPS.

reTerminal and reTerminal DM in Event Photograph

Seeed Hardware

[reTerminal](#), [reTerminal DM](#)

Industry

Event Photograph

Solution Introduction

PhotoNodes from the USA, uses the reTerminal and reTerminal DM as mobile and stationary kiosk/print servers separately at live events. Photos that have been taken by the photographers are available for viewing and printing on kiosks connected to the reTerminal servers on site. The reTerminals act as both a local access point for the camera to connect to and also connects to the web application where the photos are ultimately stored.

Road Marketing System Integrated with Raspberry Pi®

Seeed Hardware

[reTerminal](#)

Industry

Infrastructure

Solution Introduction

A road marking solution provider utilized Seeed's [reTerminal](#), a Raspberry Pi®-powered HMI, as the central control unit for their trucks. With an Ethernet connection, reTerminal effectively managed custom control devices, ensuring seamless coordination for paint dispensing and line marking. The compact 5-inch size of reTerminal simplified installation, optimizing the control system's efficiency. This integrated solution improved road marking operations, contributing to safer and more convenient road infrastructure.

reTerminal in Forest Monitoring

Seed Hardware

reTerminal

Industry

Forest Monitoring

Solution Introduction

A data security-focused software system integrator utilized reTerminal and our Raspberry Pi®-based ODM service to enhance their forest management software for end customers. With the help of reTerminal, rangers are able to remotely control cameras, capture photos, and receive image transmissions. These images are then stored on the reTerminal's SD card or eMMC for later analysis at the data center.

Location

Indonesia

Seed Customized Forest Monitoring Solution

(1) Forest Rangers carry the handheld reTerminal in the forest, and interact the device to communicate with on-field cameras to take batch photos, set timed photo taking, and adjust photo interval via LoRa

(2) When Forest Rangers issue image transmission command, the cameras send images captured back to the device, where the images stored in SD card or eMMC. Then the forest rangers take the images back to center to analyze.

Make Profit From Your Ideas with Co-create

Co-Create Program is tailored to elevate your well-established prototypes into profitable products. By streamlining marketing, packaging, and shipping processes, this program grants you more time to focus on the core of your work—product development. Once your prototype is approved by Seeed, it will be featured on Seeed Studio's marketplace. For every product sold, you earn a share of the revenue.
