Bruno Andò

Dear Readers,
Pursuing the aim of *Instrumentation & Measurement Magazine* to promote culture in the field of Instrumentation and Measurement, I am really glad to introduce this issue dealing with strategic themes for the whole community of stakeholders involved in the use and development of measuring systems.

In this issue, we host subjects such as “fundamentals of measurement,” “instrumentation and measurement systems,” “measurement and applications” and “education in the IM field,” among

others. As always, we convey unique pieces of information coming from the Instrumentation and Measurement Society.

Feature articles are also included, dealing with intriguing subjects such as health related technology, energy measurements and sensors.

I would like to thank all the authors for their valuable contributions and the effort provided to offer such, sometimes complex, subjects in a very attractive way.

Enjoy this reading,

Bruno
