LETTER FROM THE EDITORS IN CHIEF

It is our pleasure to present the thirteenth issue of Volume 17 of PVLDB (Proceedings of the VLDB). PVLDB is dedicated to showcasing original research papers that encompass a wide spectrum of subjects within the area of data and information management. Our coverage spans from fundamental theoretical principles and cutting-edge system architectures to innovative models, techniques, novel applications, and the comprehensive assessment and deployment of large-scale solutions. In our research track, we feature four equally significant categories of papers: (a) regular research, (b) scalable data science (SDS), (c) experiment, analysis & benchmark (EA&B), and (d) vision papers.

The thirteenth issue of PVLDB's Volume 17 includes 24 papers, spanning the topics of Database Engines; Graph and Network Data; Information Integration and Data Quality; Machine Learning, AI and Databases; Novel Database Architectures; Distributed Database Systems; Specialized and Domain-Specific Data Management; User Interfaces; and Database Performance and Manageability. Four topics stood out, the most popular ones in this issue: Database Engines (7 papers), Graph and Network Data (5 papers), Information Integration and Data Quality (3 papers), and Machine Learning, AI, and Databases (3 papers).

Out of the 24 papers, one is in the experiment, analysis & benchmark category, one is in the scalable data science category, and the rest are regular research papers. Nine papers were accepted after a shepherding round, and the others were accepted after revision.

PVLDB is committed to providing valuable and constructive feedback through a rigorous review process. All submissions undergo meticulous peer review by a team of accomplished Associate Editors and dedicated reviewers. Each paper receives comprehensive evaluation from a minimum of three reviewers, along with the oversight of an Associate Editor. During a three-week discussion phase, reviewers engage in a thorough exchange of perspectives, ultimately converging on a consensus, which is summarized in a meta-review. Some submissions may proceed to a revision phase, affording authors a three-month window to refine their work for subsequent review cycles.

This issue is the result of all the work put in by the authors as well as the great commitment and effort of our associate editors and reviewers as well as our proceedings chairs.
